# Configurable Templates

## MELSOFT GT Works3

### Customizable templates simplify screen development, improve efficiency and reduce effort.

Want to increase your screen design efficiency? Reuse or create a unique screen? Then "MELSOFT GT Works3" with its intuitive flexible templates is the perfect answer. Whether creating an all new front end for your system or reworking an existing design, ready-to-use templates reduce engineering development, time and effort. Developers can easily choose from a wide range of original templates or freely create new ones to meet any requirement or standard.

Supporting realistic and beautiful screen designing!  
Use the extensive parts library and font variations to design realistic and high-grade screens such as operation panel screen.

Design your desired screen with simple settings!  
Advanced functions, such as creating original templates, greatly reduce your screen creation time while enabling you to create high-level screens with simple settings.

Intuitive, easy-to-use operations to adjust the screen creation environment and utilize existing data!  
Various concepts, such as optimizing operations and using existing data, are incorporated to improve your screen design efficiency.

EASY

GOT1000 Screen Design Software

# GT Works3

Screen data is portable and forward compatible.

Visualization has evolved to offer more than what you see is what you get.

Enhanced "easy-to-use" functions for efficient screen design!

**P.8 Work Tree**  
View the whole project, create a new screen, and add and delete screens with ease.

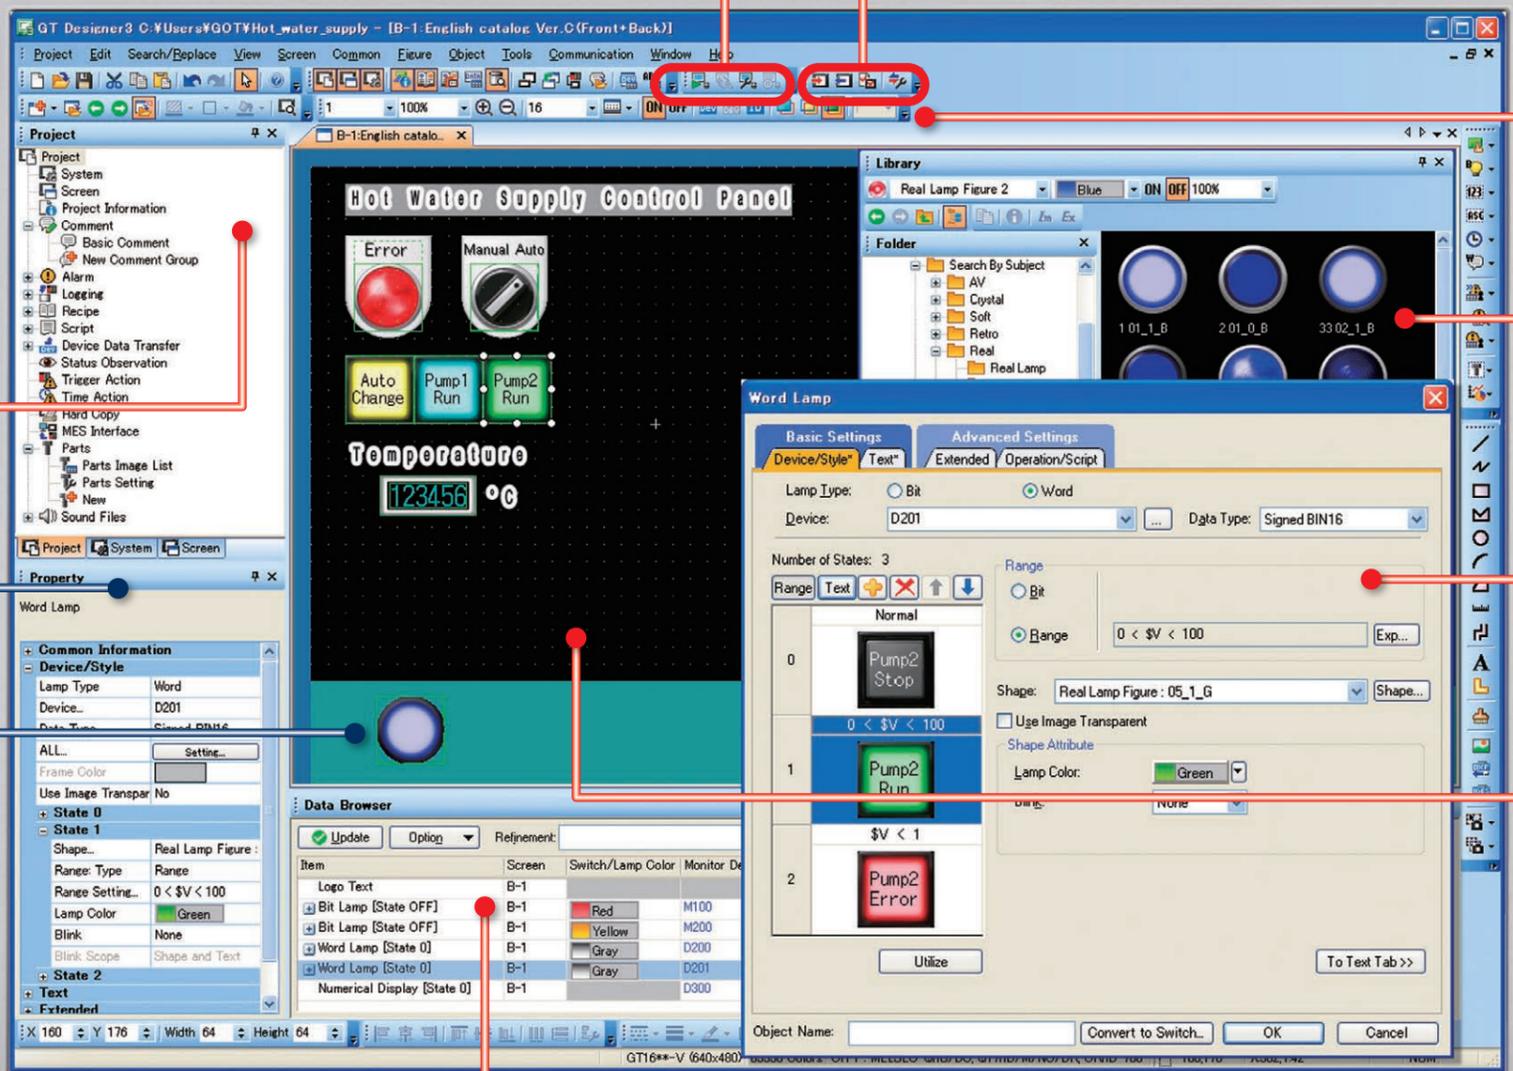

**Property Sheet**  
A selected object or graphic's settings are displayed as a tree view. Set colors, devices, etc., on the property sheet without opening a dialog box. When selecting multiple objects or graphics, change color, character size, etc., all at the same time.

**Temporary Area**  
Reduce workspace clutter by moving objects off of the display area.

**MELSOFT iQ Works Improves Design Efficiency (P.23)**  
Batch parameter check and system labels of MELSOFT Navigator are supported.

**P.13 Data Browser**  
The object settings are listed allowing settings to be confirmed and revised easily!

**Related Tools (P.23, 24)**  
GT Works3 comes with various tools such as the Data Transfer Tool and GT Converter2.

**P.19 Simulator**  
Preview operation without connecting to a GOT.

**P.18 Communication with GOT**  
Communication settings and drivers are automatically selected and downloaded to the GOT with the project data.

**P.8 Tool Bar**  
Vividly colored icons make distinguishing active functions from inactive ones easy.

**P.9 Library**  
Parts are easy to select. High resolution graphics and parts are easy create and incorporate into projects.

**P.9 Dialog Box**  
User-friendly dialog boxes and object settings.

**P.10 Editor <Screen Design Area>**  
Many convenient and efficient development functions are included!  
**New functions improve your screen design efficiency than ever before!**  
● Use "templates" to greatly reduce your screen creation time! (P.10)  
● Make batch changes with a single right-click! (P.16)  
● Register parts with a single right-click! (P.16)  
● Easily create addition and subtraction word switches! (P.17)

**P.21** User (OEM/End User) Security Function!

**P.21** The Help Function is available for quick reference!

# GT Works3's extensive library supports realistic and high-

# grade screen design

To create sophisticated screens quickly

Library

Many high-resolution parts are available

To make screen titles attractive

Logo Characters

Decoration!

New logo characters and new decorations. Outlines and neon make your characters more expressive. Characters up to 800 dots in size can be used.

Choose a font freely

Font Variations

A wide variety of fonts!

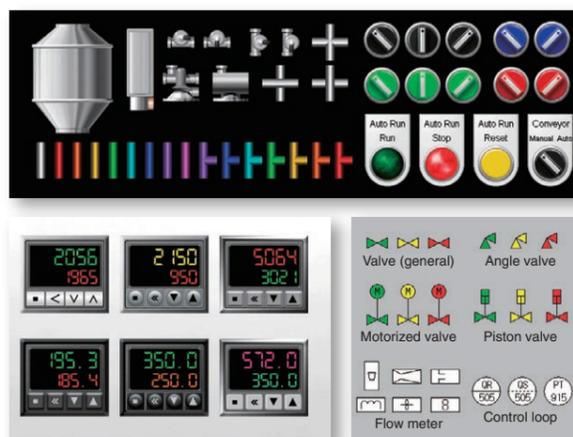

The GOT1000 displays a stunning range of fonts.

- Standard fonts
  - Small characters are displayed clearly.
- Stroke fonts
  - The font size is specified in dots.
- Windows® fonts
  - Your favorite fonts can be used.

All fonts conform to Unicode 2.1, and about 40 languages can be displayed clearly. Thai characters are clearly displayed using stroke fonts.

Full lineup of useful parts!

The parts library is full of useful parts such as colored piping parts and dial switches of different angles.

The new lineup includes temperature controller parts and process control parts.

Have fun designing your screen with this extensive parts library!

GOT's various parts will support your screen design work.

FINE

SIMPLE

EASY

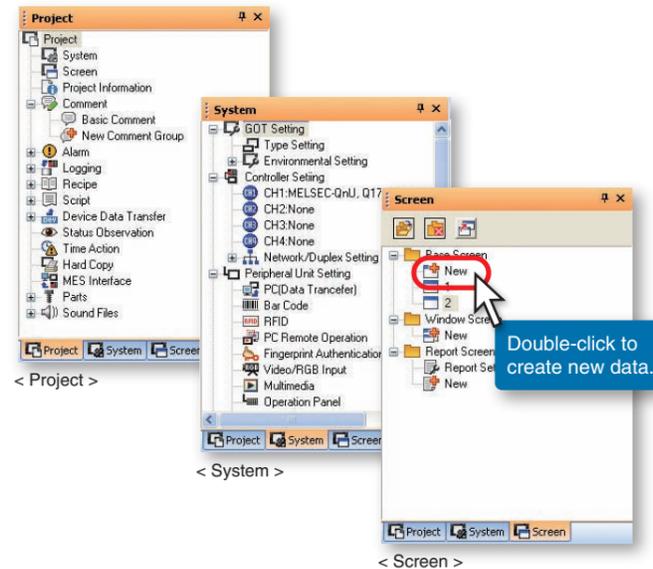

# Bringing you high-level screen design with simple, easy-to-use settings and operations

With all these settings – which should I choose?

## Work Tree

Setting items are categorized so you can choose what you want more quickly

Setting items in a project are categorized clearly into projects, systems, and screens. Everything is displayed so you can find what you want quickly. Create new screens or comments just by double-clicking on "New".

What function best fits my application?

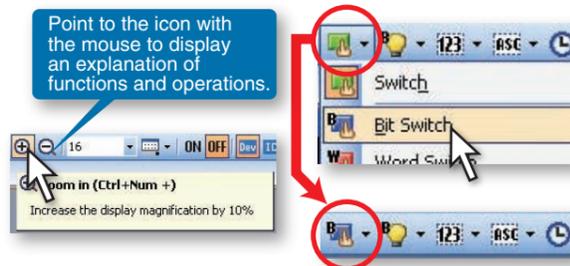

## Tool Bar

New icons simplify function selection and improve efficiency

Simply designed full-color icons and easy explanations let anyone design screens easily. Previous selections are stored to increase design work efficiency.

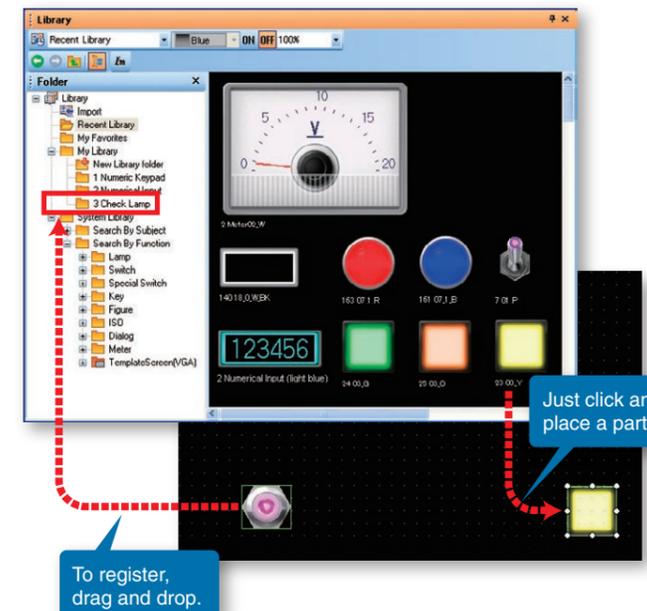

Say you select the bit switch from the menu to create a switch object -- the bit switch icon is immediately displayed so you can just click the icon to create another bit switch – no need to choose from a function menu.

Lots of libraries -- but what are they for?

## Library

Cut library retrieval time!

Finding objects in the parts library is easy and you can simply choose a library by object type, by function, from the recently used library list, or from the "My Favorites" folder.

To create a visual masterpiece - just choose parts from the library and place the objects on screen - what could be easier?

To register a part, just select it and drag and drop it into the library.

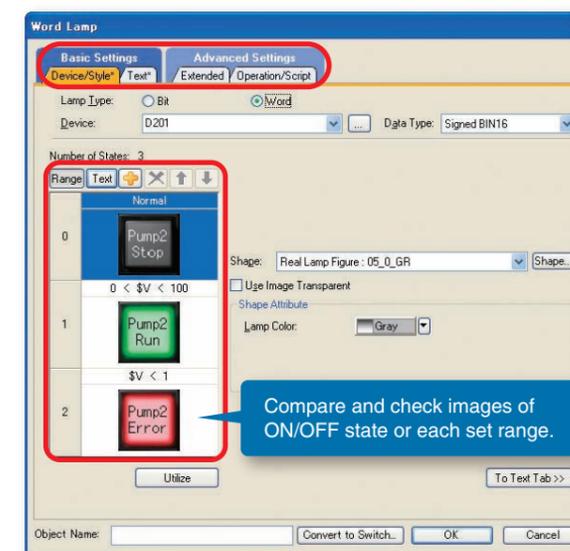

Register a part in the "My Favorites" folder with a single right-click. **NEW**

Easily select the template screen and parts with dedicated icons.

But what items do I set?

## Dialog Box

Terms and display items are improved to make settings easier!

Choose settings and operations using simple terms and display items. Object settings, ON/OFF conditions and other states can be modified and displayed directly from the configuration dialog box - saving valuable time and effort.

Dialog tabs with "\*" marks quickly show designers that object settings have been modified.

# Quickly design your screens using a full range of templates. Original templates can also be created and saved

Enhance your work performance by saving your frequently used screens as “templates”

**Version Upgrade** Use “templates” to greatly reduce your screen creation time!

**Editor 1**

Create a template from frequently used screens and parts. **NEW**

Template attributes such as devices and colors can be specified in a template.

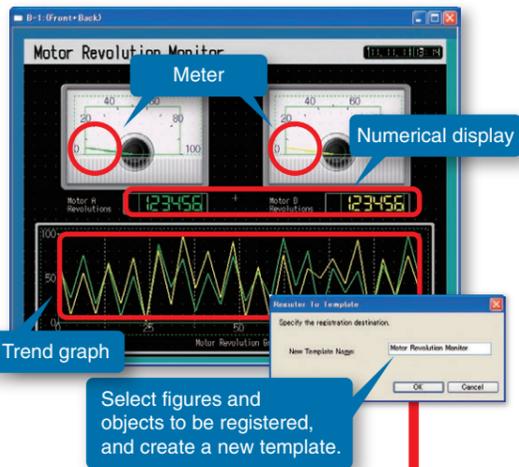

By associating attributes of individual objects to the template attributes, devices, colors, and other attributes can easily be changed at a time.

<Items that can be registered in template> Figures and objects on the same screen editor

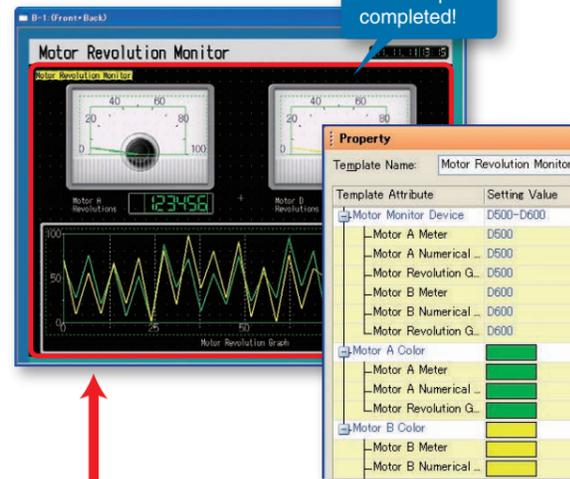

<Types that can be registered and changed in template attributes>

Devices (bits, words), numerical values, text, colors, figures **NEW**, fonts **NEW**, font size **NEW**

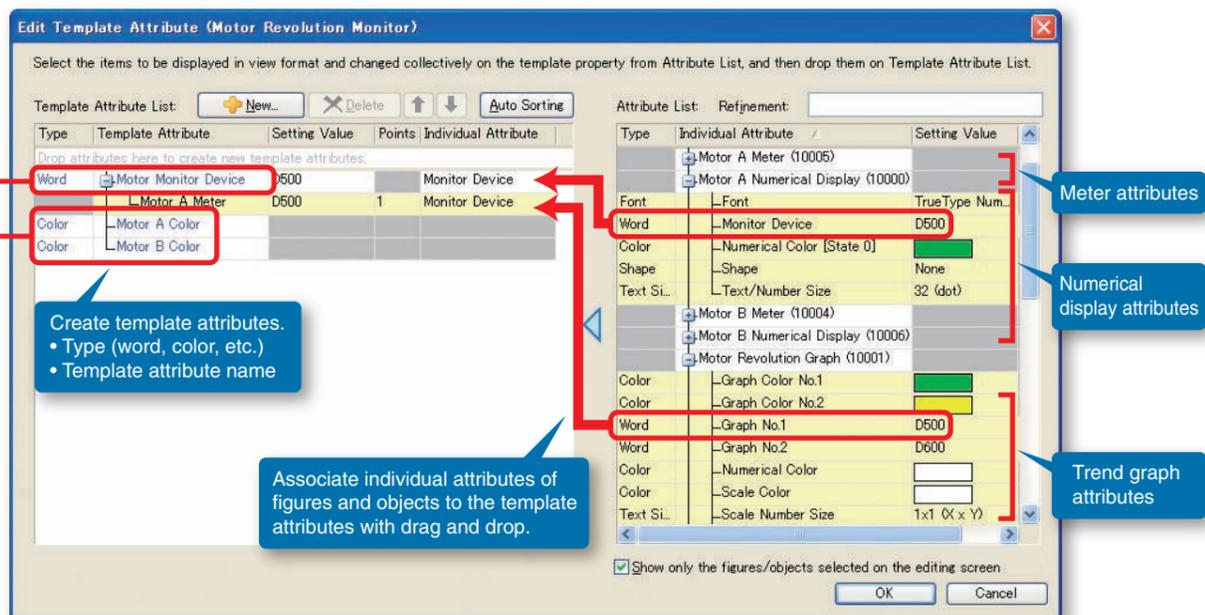

<Creating a new template>

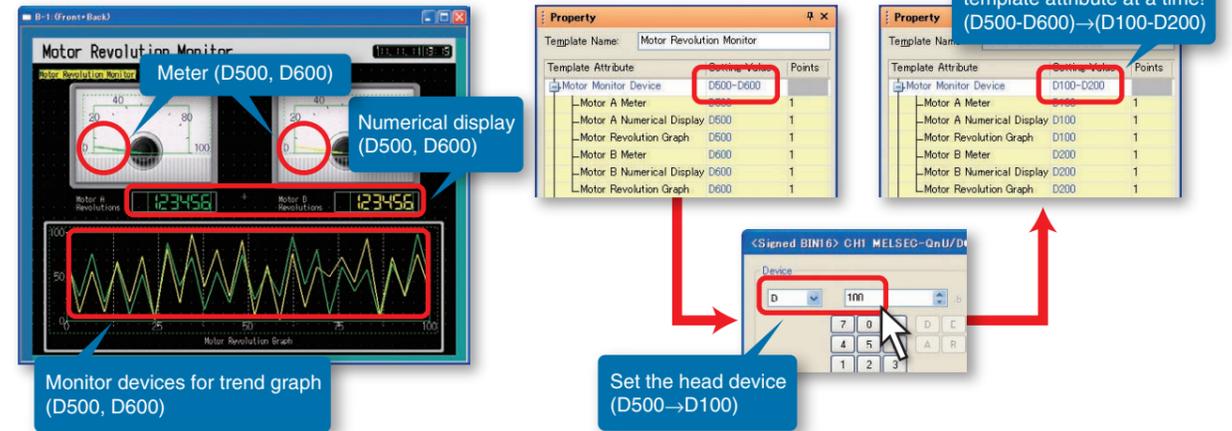

<Completed template>

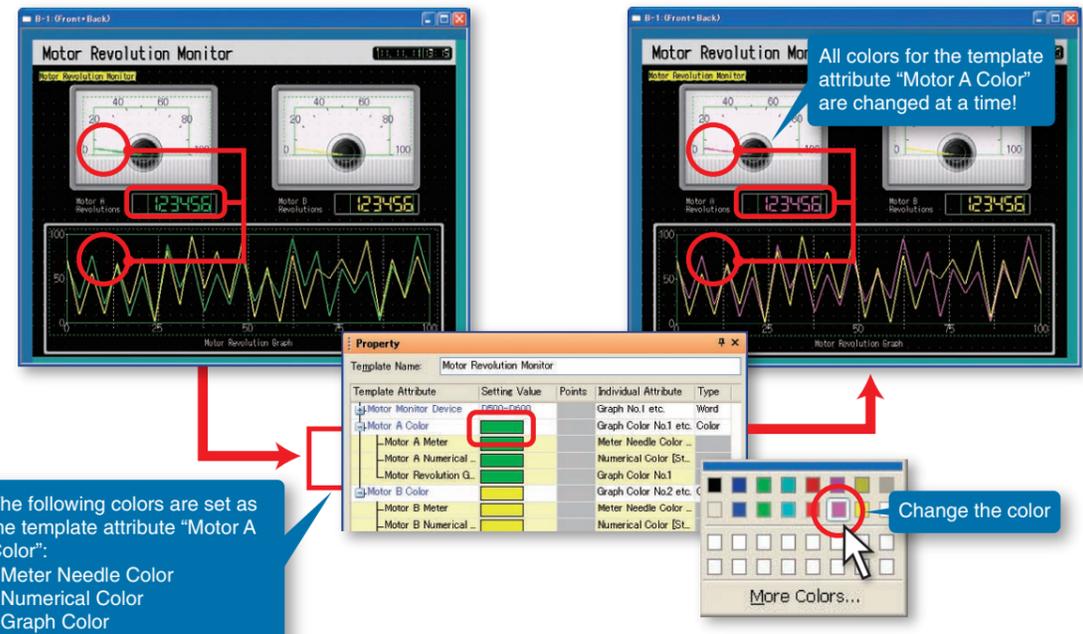

<Creating and associating template attributes>

<Changing devices>

<Changing colors>

When the created template is saved in the library, it can easily be used in other projects, thus greatly improving your screen designing efficiency.

The system library contains various templates (function screens, controller monitor screens, etc.) which can be used freely.

\*: For more details on the templates registered in the system library, please refer to page 12.

"Menus", "graphs" and "monitors"... Why spend lots of time making these frequently used screens?

**Editor 1**

Visit the diverse lineup of ready-to-use "templates"!

Select various template screens and parts according to your target or application.  
 Template screens are available in three sizes: XGA **NEW**, VGA and QVGA **NEW**.

### Function Screens

Users can freely edit the templates from the System Library!

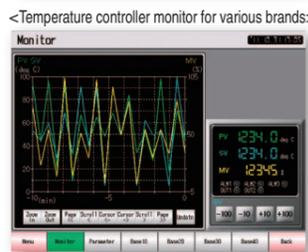

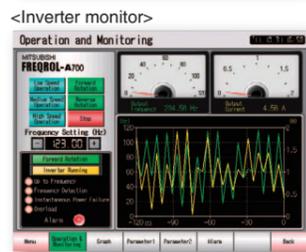

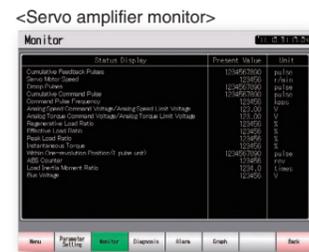

- ▶ Menu
- ▶ Device monitor
- ▶ Advanced alarm
- ▶ Historical (graph + list)
- ▶ Document display
- ▶ Calendar
- ▶ Clock data change

### Controller Monitor Screen

Users can freely edit the templates from the System Library!

- ▶ CC-Link network monitor
- ▶ Special module monitor
- ▶ Servo amplifier monitor **Version Upgrade**
- ▶ Inverter monitor
- ▶ Temperature controller monitor for various brands **Version Upgrade**

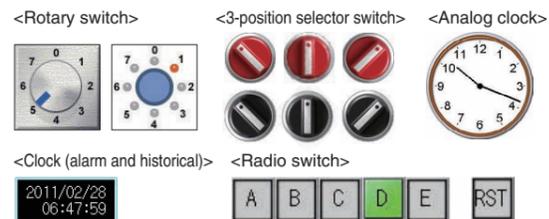

### Parts

Users can freely edit the templates from the System Library! **NEW**

Changing the part colors and devices, which used to be bothersome, is now easy by using the templates.

- ▶ Rotary switch
- ▶ 3-position selector switch
- ▶ Analog clock
- ▶ Clock (alarm and historical)
- ▶ Radio switch, etc.

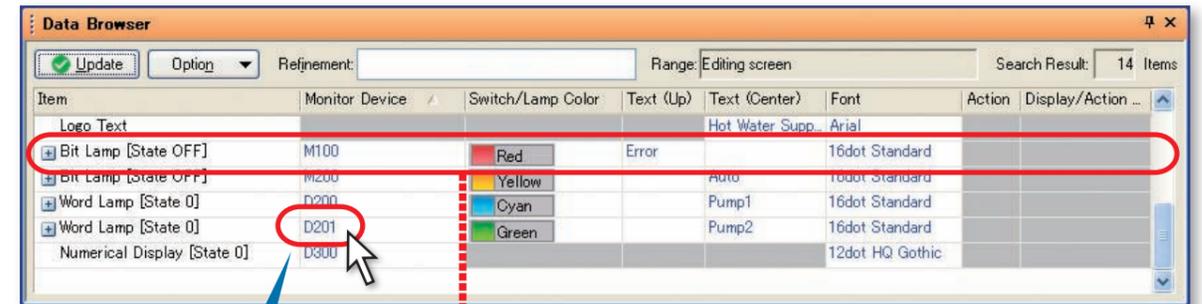

Templates are continuously updated

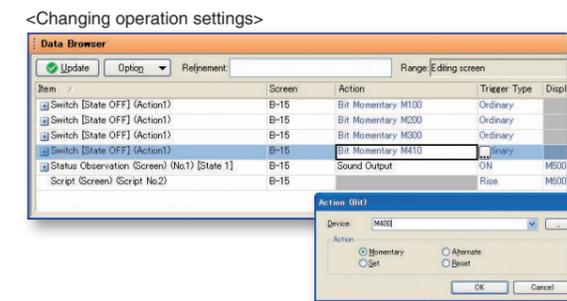

Quickly find out the settings of objects in the project

**Editor 2**

"Data Browser" makes it easy to check and modify settings

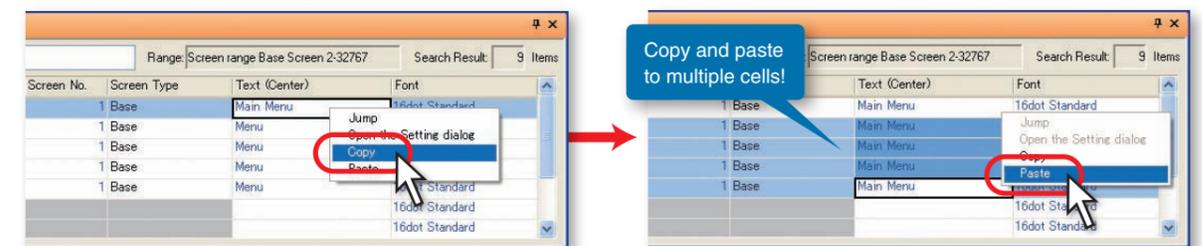

The settings of objects used in the project can be displayed and edited in the list.  
 The settings for the "script", "status monitor" and "trigger actions", etc., used in base/window screens can also be displayed and edited.  
 Operability in the list has been increased to improve efficiency of data editing when many screens are included or when existing screens are imported in the data.

- Directly edit devices and text in the list
- Change devices, text and colors in a batch
- Change action settings and fonts
- Copy and paste multiple cells
- Sort and narrow down items by using devices and keywords

<Copy/paste of multiple cells> Change names of Go To Screen switches to Main Menu (screen No.1) from "Menu" to "Main Menu" on all screens.

# Data checking and correction work is now so easy

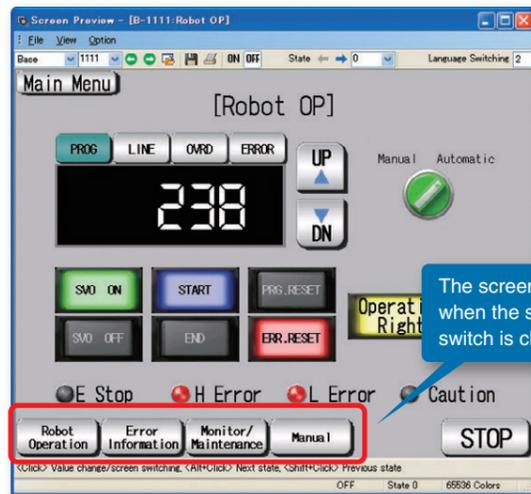

## Easily check the screen switching and ON/OFF displays!

Editor 3

### Simple simulation with "Screen Preview"

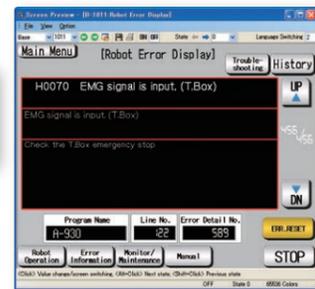

Simple simulation and screen switching can be checked in the Screen Preview window. By turning certain switches ON/OFF, entering device values, and printing/saving specific screen images, you can easily create specification documents and operation manuals.

<Confirmation of screen selection switches>

The screen display can be switched in the Screen Preview. The editing screen can be opened in sequence with the preview screen so modifications can be made and then viewed in real-time on the preview screen.

The screen will change when the screen selection switch is clicked.

<Switching lamp/switch display (ON/OFF)>

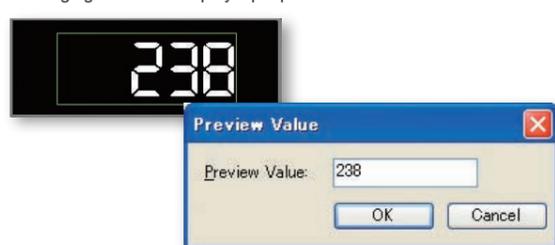

Lamp/switch displays (ON/OFF, states) can be changed for each object separately.

The state can also be switched by pressing Alt key + click (next state) or Shift key + click (previous state).

<Switching lamp/switch display (states)>

<Changing numerical display/input preview value>

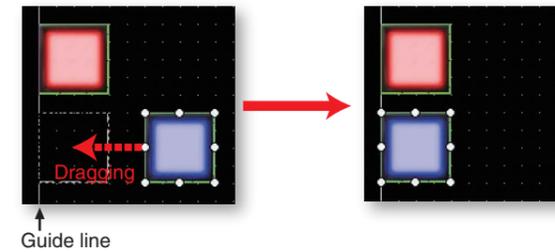

Preview values of numerical display/input and ASCII display/input objects can be changed.

## To place an object using only the mouse

Editor 4

### Correct positioning along a guide line

Drag the object to display the guide line -- Place the object using the mouse.

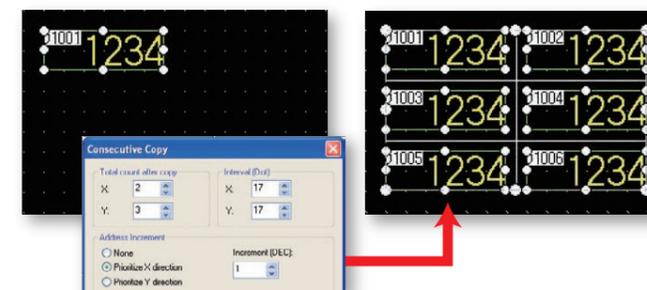

Guide lines can be displayed to the left/right, center, or top/bottom of figures and objects.

The guide lines can also be displayed at the center of the screen and the boundary between the screen display area and the temporary area. **NEW**

## To lay out multiple figures and objects

Editor 5

### Use the continuous copy function to lay things out!

Copy the specified number of figures or objects all at once. When copying objects containing devices, assign device numbers by setting the increment.

## To change settings for multiple figures or objects at the same time

Editor 6

### Easy correction with batch change and width/height/coordinate input functions!

Batch corrections including devices, colors, figures and channel numbers can be done all at once.

With the width/height/coordinate input function, change the size of selected objects and rearrange them all at the same time by inputting width, height, and coordinates.

	Before	After
1	Red	Green
2	Yellow	Cyan
3		

< Batch correction -- changing color >

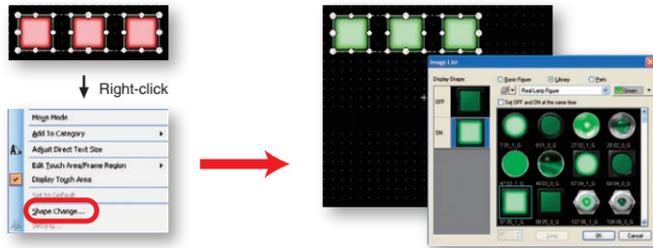

Coordinate/Size  
X: 64, Y: 64, Width: 129, Height: 64  
< Width/height/coordinate input >

To effortlessly change figures

Editor 7

**Change figures by just right-clicking**

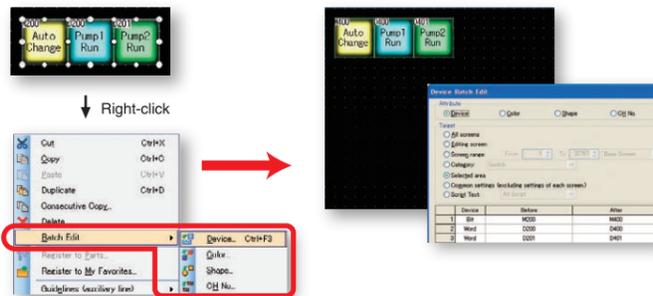

Change multiple figures easily with one operation while checking images of switches and lamps.

If only batch changes could be made more easily

Editor 8

**NEW Make batch changes with a single right-click!**

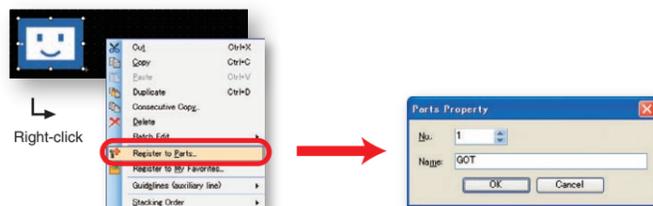

When multiple objects are selected and the right-button is clicked, the batch change menu will appear. This menu simplifies the batch change of devices, colors, figures and channel numbers.

With so many parts to register, it just takes too much time...

Editor 9

**NEW Register parts with a single right-click!**

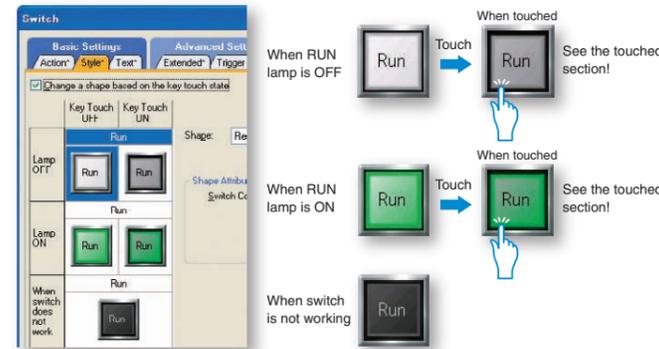

Easily register parts by selecting the required figure and right-clicking.

Is there an intuitive way to find out the operation state?

Editor 10

**Use a switch to display four states and indicate an invalid state!**

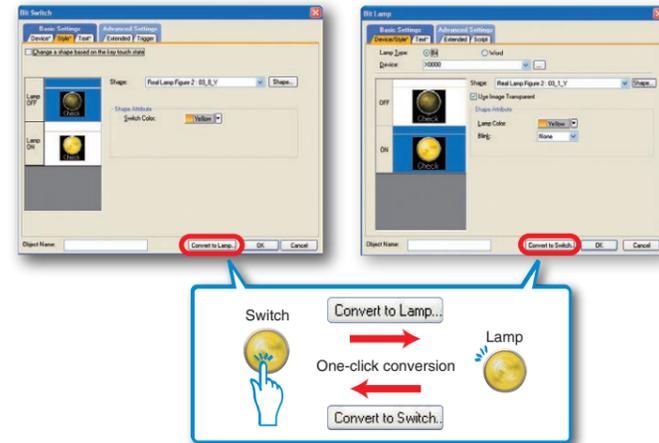

Four different states can be indicated by combining touch states and device states of a touch switch.

The style and the text can also be specified for the state when the switch does not work. **NEW**

To efficiently change objects

Editor 11

**A single click toggles a switch and lamp!**

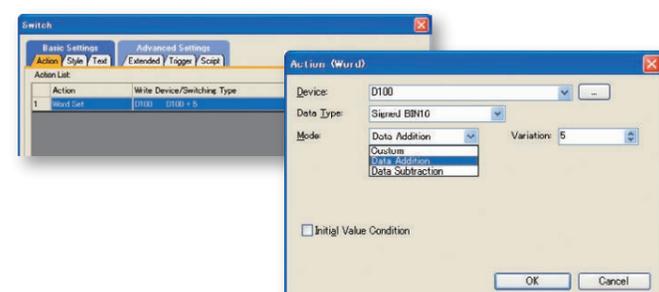

Convert switch and lamp objects easily with just one click.

Create frequently used switches as easily as possible

Editor 12

**NEW Easily create addition and subtraction word switches!**

Word switches which add or subtract values can be created easily. Addition and subtraction are possible even when the data format is "unsigned BIN" or "BCD".

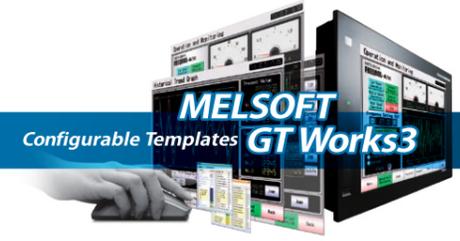

SIMPLE

SIMPLE

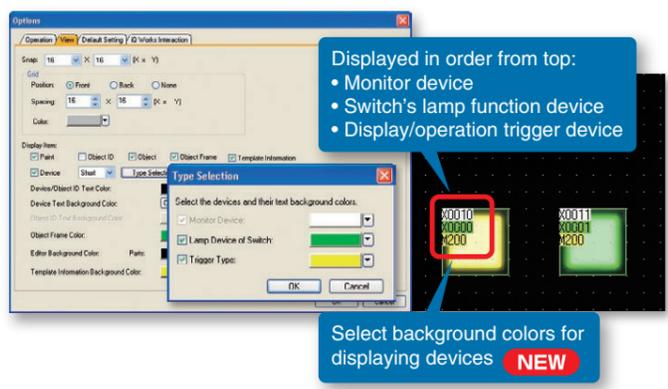

EASY

EASY

# Simple, one-click operations are your effective tool for checking and transferring data

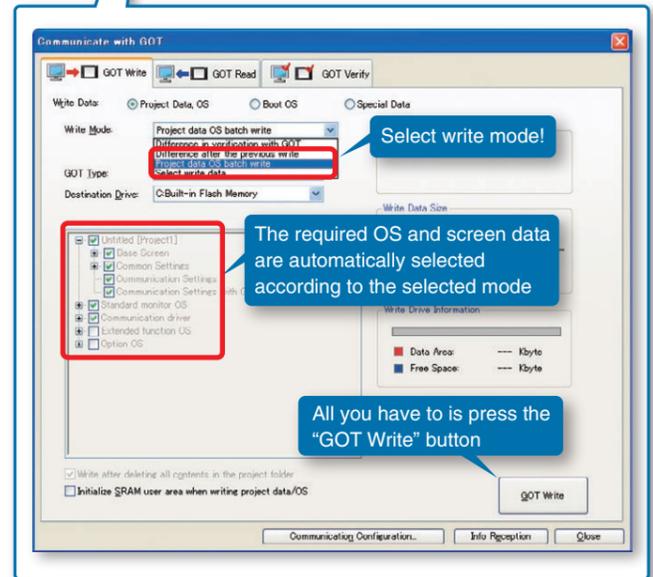

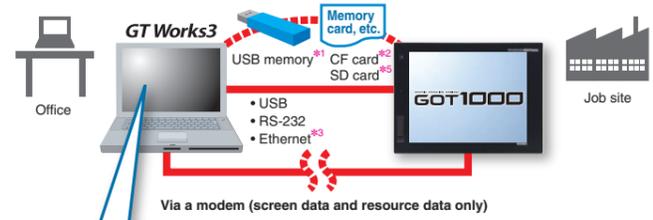

## Is there any way to see specified devices at a glance? **Editor** Display lamp function devices and trigger devices of switches!

In addition to the monitor device, the switch's lamp function device and display/action trigger device can be displayed. The setting details for the entire screen can be checked at a glance without opening setting dialogs or checking property sheets. Use this easy function to prevent device setting mistakes.

## Does the software really check the OS automatically when transferring data to the GOT? **Communication with GOT** Select the OS and transfer data with a single click!

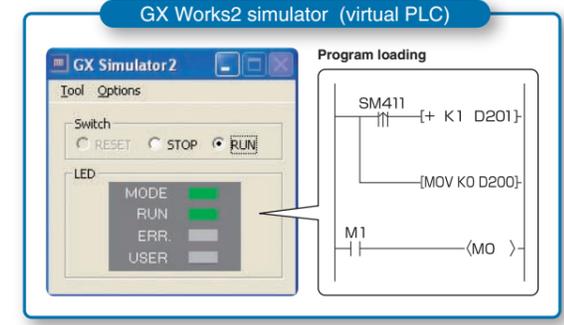

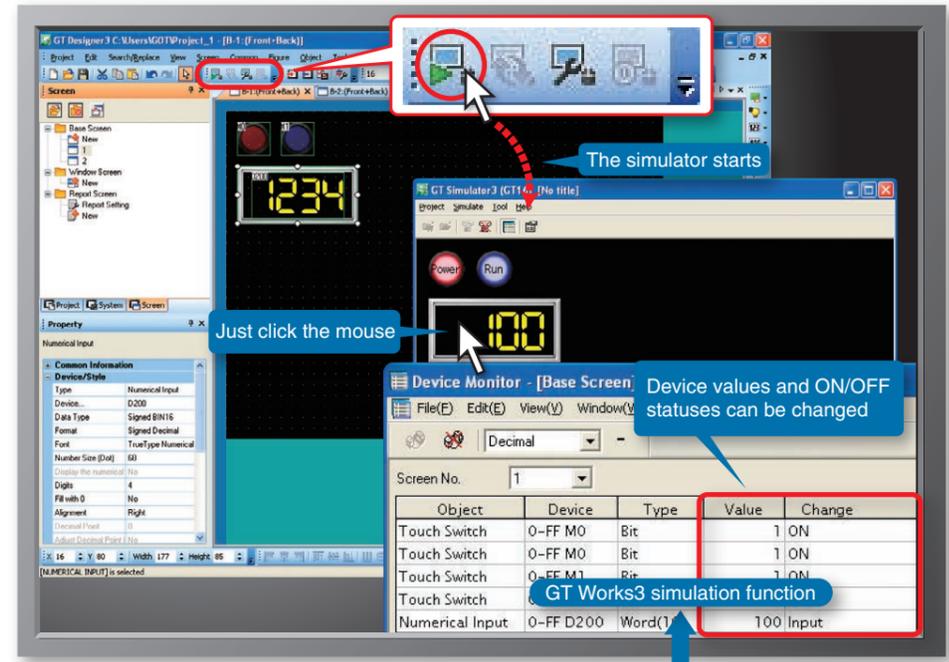

The "write mode" can be selected when transferring data. By selecting "project data OS batch write", the OSs\*4 required by the GOT are automatically selected according to the contents of the screen data. The selected OSs are transferred together with the screen data to the GOT.

- "Project data OS batch write": The required data is automatically selected according to the contents of the screen data. Use this convenient function when transferring data to the GOT for the first time.
- "Difference in verification with GOT", "Difference after the previous write": Since only difference data is selected, the communication time can be shortened. This is convenient for debugging and making corrections.
- "Select write data": Data can be selected freely.

\*1: GT16/GT14 only.  
\*2: Excluding GT14/GT10. GT105□/GT104□ can transmit data using GT10-50FNB and GT1030/GT1020 by using GT10-LDR.  
\*3: GT16/GT15/GT14/GT12 only. If the IP address is unknown, GOTs in the Ethernet network can be searched. (GT16 only).  
\*4: Dedicated system files required for using GOT.  
\*5: GT14 only.

## To check created data without the actual machine! **Simulator** Simulation with a click!

Use your PC to check screen data operation -- check alarms and monitor screen changes and devices. Debug data while correcting the screen. Start and update the simulator with one click and test devices easily. The simulator stores screen images in BMP and JPEG formats -- convenient for preparing operating manuals. All GOT1000 models including GT14 **NEW**, GT12, and GT10 can be simulated.

\*: GX Works2 or GX Simulator is required separately.

SIMPLE

SIMPLE

EASY

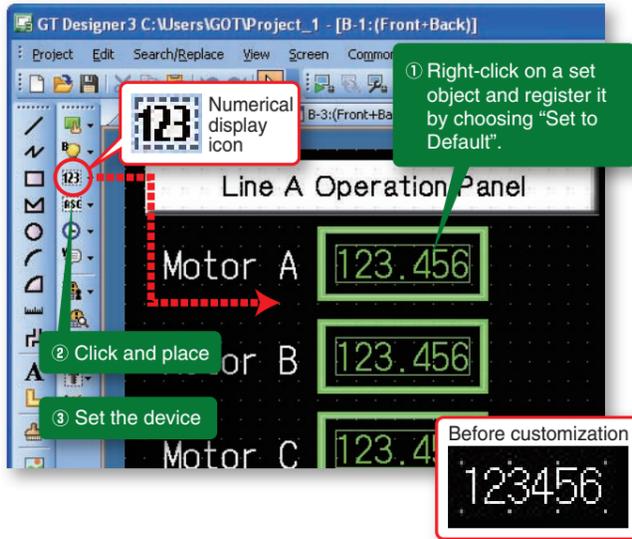

EASY

# Personalize the screen design environment to further reduce screen creation time

## Instantly suit your preferences

### Change initial settings as you like

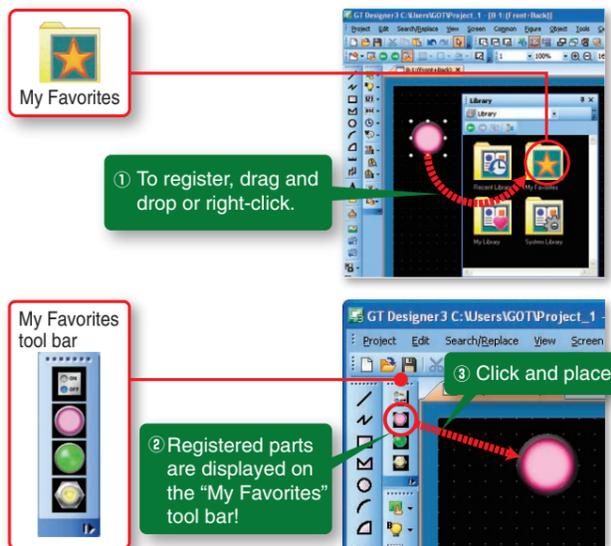

Initial settings for objects and figures can be tailored to suit the individual programmer or designer. Frequently used objects can be pre-loaded and pre-configured to reduce the time to configure.

Registered data is sharable with other projects and personal computers to design screens efficiently.

## To reuse the same parts often

### Select your favorite parts directly from the tool bar!

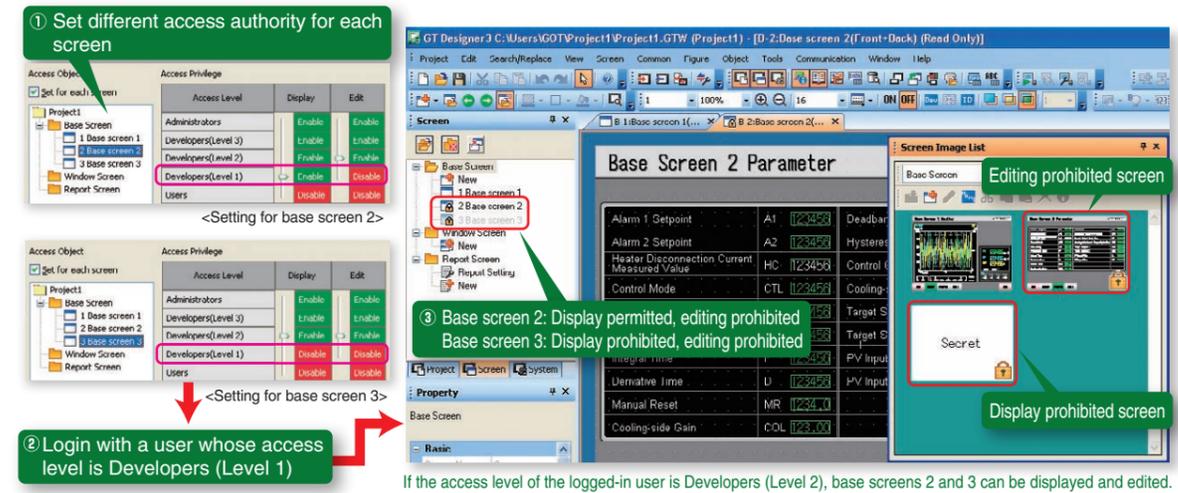

Objects on the "My Favorites" tool folder in the library are displayed on the "My Favorites" tool bar. An object can be added to the "My Favorites" folder just by drag and drop, or by right click **NEW** on the object. Place it by clicking on the tool bar.

## Protect your valuable screen assets!

### **NEW** The User (OEM/End User) Security Function prevents your valuable data from being leaked or changed!

Protect your project data by setting access authority (availability of displaying and editing a project) with a five-stage access level not only for the project but also for screens. When the several people are involved in designing the screen, a specific screen can be protected by setting different access authority for each screen. The availability of displaying or editing the project can be confirmed with the work tree or the screen image list.

\*: Project data having security set with GT Works3 Version 1.45X or later cannot be handled with a version older than GT Works3 Versions 1.45X.

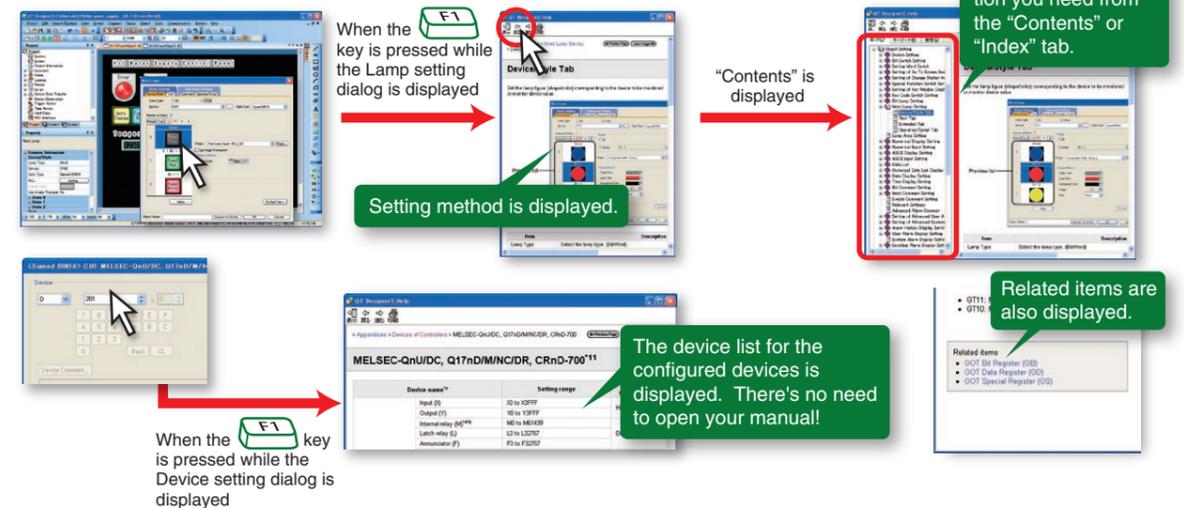

If the access level of the logged-in user is Developers (Level 2), base screens 2 and 3 can be displayed and edited.

## Find the information you need at your fingertips!

### The Help Function eliminates the need for manuals

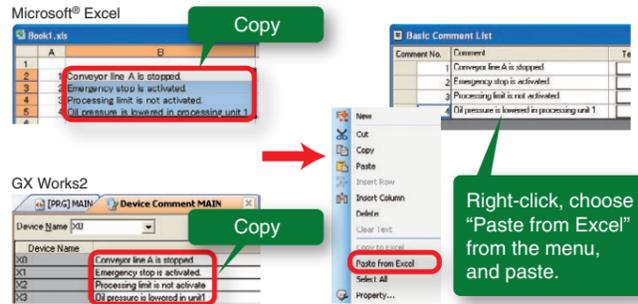

When the F1 key is pressed, help for the currently active dialog opens immediately! Easily check the information you need.

# Streamlined data manipulation goes beyond conventional screen design software

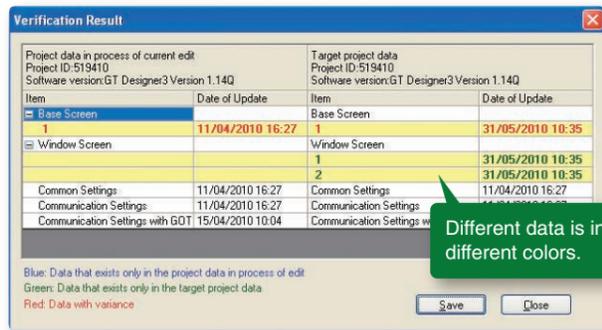

## To enter comments and create recipe data quickly Improve work efficiency working with other applications

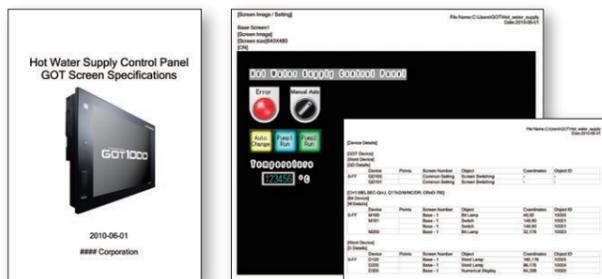

Select comments in Microsoft® Excel or GX Works2 and paste them into a comment list. Import and export are also available for the data created in CSV/Unicode text file format.

## How do these two pieces of data differ? Verifying project data

- Verify project data.
- 1 Verifying project data between data on GOT and data on a personal computer.
  - 2 Verifying project data being edited on a personal computer with other project data.

## Preparing specifications Printing to prepare specifications easily

The cover, screen images, and the list of set devices can be printed or output to a file. Prepare specifications and operation manuals easily.

## What can I do with MELSOFT iQ Works? MELSOFT iQ Works lets you design systems more efficiently

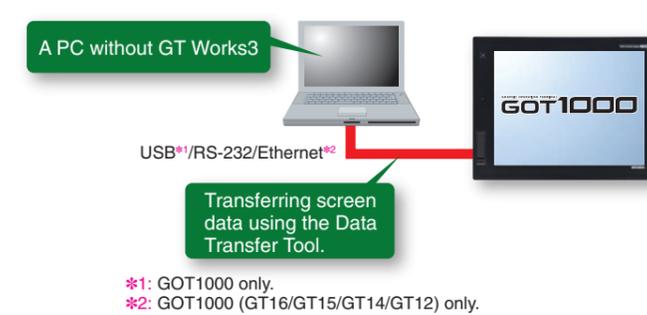

Configure a system combining GOT and PLCs and set up GOT I/F and communication drivers using MELSOFT Navigator, the system management software for the FA integrated engineering software package MELSOFT iQ Works.

System labels set by MELSOFT Navigator can be used in GT Works3.

**What is MELSOFT Navigator?**  
MELSOFT Navigator is a MELSOFT iQ Works software application enabling you to create system configurations, set up GOT I/F and communication drivers, check power supply capacity and the number of input/output points, as well as set parameters including I/O assignment.

**What is a system label?**  
A system label makes names of devices in connected equipment easy to understand. System labels can be shared with PLC/motion controller programs of MELSOFT iQ Works. For details, see the MELSOFT iQ Works catalog <L(NA)08232ENG>.

## Do I need to install screen design software on my PC? Data transfer tool

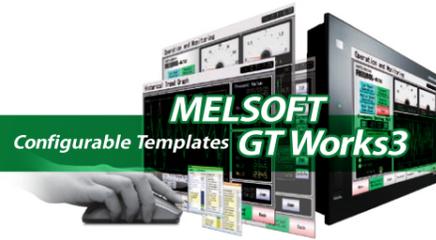

Use the Data Transfer Tool to transfer screen data from a PC without GT Works3.

- Applicable GOTs  
GOT800, GO900 and GOT1000
- Transferable data  
Project data  
Resource data (GOT1000 only)

\*1: GOT1000 only.  
\*2: GOT1000 (GT16/GT15/GT14/GT12) only.

Supporting your screen design work by making much use of existing data assets

How do I edit GOT900 Series screen data?

GT Designer2 Classic

Data is edited using GT Designer2 Classic!

GOT900 Series screen data is edited using GT Designer2 Classic provided with GT Works3!

Can I use screen data for the GOT800 Series?

GT Converter2

Data can be converted into the GOT1000 format with GT Converter2

GT Converter2 converts project data created by previous screen design software applications to GT Works3 compatible data.

**Supported screen design software**

GOT800 Series screen design software (SW3NIW-A8GOTP)  
Digital Electronics Corporation (Pro-face) screen design software (GP-PRO/PB III Series)

\*: Some data and functions may not be convertible.

**MELSOFT GT Works3 (English version) operating environment**

\*1: Use GT Simulator3, GX Developer, GX Simulator, and GX Works2 of the same language version.

\*2: The GOT-A900 cannot be simulated.

\*3: May be required when the simulation function is used.

**[Cautions]**

- The software installation and the GOT-A900 simulation require administrator authority.
- Using GT Works3 application requires an account with higher privileges than the standard user in Windows® 7 and Windows Vista®.
- To use GT Works3 alongside another application in Windows® 7 and Windows Vista®, use an administrator account to run it if an administrator account is used to run the other application.
- The following functions are not supported in Windows® 7, Windows Vista®, or Windows® XP. Running Applications in Windows® Compatibility Mode, Fast User Switching, Desktop Theme (Font Size) Change, Remote Desktop, DPI Setting other than 100%.
- Windows XP Mode, Windows Touch features are not supported in Windows® 7.

# Mitsubishi iQ Platform Compatible GOT1000 Screen Design Software MELSOFT GT Works3

## Precautions for Choosing the Products

This catalog explains the typical features and functions of MELSOFT GT Works3 and does not provide restrictions and other information on usage and module combinations.

When using the products, always read the user's manuals of the products.

Mitsubishi Electric will not be held liable for damage caused by factors found not to be the cause of Mitsubishi Electric; machine damage or lost profits caused by faults in the Mitsubishi Electric products; damage, secondary damage, accident compensation caused by special factors unpredictable by Mitsubishi Electric; damages to products other than Mitsubishi Electric products; and to other duties.

## For safe use

- To use the products given in this catalog properly, always read the related manuals before starting to use them.
- The products within this catalog have been manufactured as general-purpose parts for general industries and have not been designed or manufactured to be incorporated into any devices or systems used in purpose related to human life.
- Before using any product for special purposes such as nuclear power, electric power, aerospace, medicine or passenger movement vehicles, consult with Mitsubishi.
- The products within this catalog have been manufactured under strict quality control. However, when installing the product where major accidents or losses could occur if the product fails, install appropriate backup or failsafe functions in the system.
