# MITSUBISHI 

Mitsubishi Programmable Controller

Transition from MELSECNET/MINI-S3, A2C (I/O) to CC-Link Handbook

## MELSECNET/MINI-S3 A2C (I/O)

## - SAFETY PRECAUTIONS

(Read these precautions before using this product.)

Before using this product, please read this manual and the relevant manuals carefully and pay full attention to safety to handle the product correctly.
In this manual, the safety precautions are classified into two levels: " $\uparrow$ WARNING" and "

Under some circumstances, failure to observe the precautions given under " $\$$ CAUTION" may lead to serious consequences. Observe the precautions of both levels because they are important for personal and system safety.

Make sure that the end users read this manual and then keep the manual in a safe place for future reference.

## [Design Precautions]

## WARNING

Configure safety circuits external to the programmable controller to ensure that the entire system operates safely even when a fault occurs in the external power supply or the programmable controller. Incorrect output or malfunction due to a communication failure may result in an accident.
(1) Emergency stop circuits, protection circuits, and protective interlock circuits for conflicting operations (such as forward/reverse rotations or upper/lower limit positioning) must be configured external to the programmable controller.
(2) When the programmable controller detects the following problems, it will stop calculation and turn off all outputs in the case of (a).
In the case of (b), it will hold or turn off all outputs according to the parameter setting. Note that the A series module will turn off the output in either of cases (a) and (b).

|  | Q series module | A series module |
| :---: | :---: | :---: |
| (a) The power supply module has over current <br> protection equipment and over voltage <br> protection equipment. | Output OFF | Output OFF |
| (b) The programmable controller CPU self- <br> diagnosis functions, such as the watchdog <br> timer error, detect problems. | Hold or turn off all output <br> according to the parameter <br> setting. | Output OFF |

Also, all outputs may be turned on if an error occurs in a part, such as an I/O control part, where the CPU module cannot detect any error. To ensure safety operation in such a case, provide a safety mechanism or a fail-safe circuit external to the programmable controller. For a fail-safe circuit example, refer to the MELSEC-L CPU Module User's Manual (Hardware Design, Maintenance and Inspection).
(3) Outputs may remain on or off due to a failure of a component such as a transistor in an output circuit. Configure an external circuit for monitoring output signals that could cause a serious accident. Configure an external circuit for monitoring output signals that could cause a serious accident.

## [Design Precautions]

## WARNING

- In an output module, when a load current exceeding the rated current or an overcurrent caused by a load short-circuit flows for a long time, it may cause smoke and fire. To prevent this, configure an external safety circuit, such as a fuse.
- Configure a circuit so that the programmable controller is turned on first and then the external power supply.
If the external power supply is turned on first, an accident may occur due to an incorrect output or malfunction.
- In the case of a communication failure in the network, the status of the error station will be as follows: Check the communication status information and configure an interlock circuit in the sequence program to ensure that the entire system will operate safely.
Incorrect output or malfunction due to a communication failure may result in an accident.
(1) All inputs from remote I/O stations are turned off.
(2) All outputs from remote I/O stations are turned off.
- When connecting a peripheral with the CPU module or connecting an external device, such as a personal computer, with an intelligent function module to modify data of a running programmable controller, configure an interlock circuit in the program to ensure that the entire system will always operate safely.
For other forms of control (such as program modification or operating status change) of a running programmable controller, read the relevant manuals carefully and ensure that the operation is safe before proceeding.
Especially, when a remote programmable controller is controlled by an external device, immediate action cannot be taken if a problem occurs in the programmable controller due to a communication failure.
To prevent this, configure an interlock circuit in the program, and determine corrective actions to be taken between the external device and CPU module in case of a communication failure.

## [Design Precautions]

## \. CAUTION

- Use the programmable controller in an environment that meets the general specifications in a product manual.
Failure to do so may result in electric shock, fire, malfunction, or damage to or deterioration of the product.
- Do not install the control lines or communication cables together with the main circuit lines or power cables.
Keep a distance of 100 mm or more between them.
Failure to do so may result in malfunction due to noise.
- During control of an inductive load such as a lamp, heater, or solenoid valve through an output module, a large current (approximately ten times greater than normal) may flow when the output is turned from off to on. Therefore, use a module that has a sufficient current rating.

## [Installation Precautions]

| $\triangle$ CAUTION <br> - Connectors for external devices must be crimped with the tool specified by the manufacturer, or must be correctly soldered. Securely connect the connector to the module. <br> - Use the programmable controller in an environment that meets the general specifications in the QCPU User's Manual (Hardware Design, Maintenance and Inspection). <br> Failure to do so may result in electric shock, fire, malfunction, or damage to or deterioration of the product. <br> - To mount the module, while pressing the module mounting lever located in the lower part of the module, fully insert the module fixing projection(s) into the hole(s) in the base unit and press the module until it snaps into place. <br> Incorrect interconnection may cause malfunction, failure, or drop of the module. <br> When using the programmable controller in an environment of frequent vibrations, fix the module with a screw. <br> Tighten the screws within the specified torque range. <br> Undertightening can cause drop of the screw, short circuit, or malfunction. <br> Overtightening can damage the screw and/or module, resulting in drop, short circuit, or malfunction. <br> - When using an extension cable, connect it to the extension cable connector of the base unit securely. <br> Check the connection for looseness. <br> Poor contact may cause incorrect input or output. <br> - Shut off the external power supply (all phases) used in the system before cleaning the module. <br> Failure to do so may result in damage to the product. <br> A module can be replaced online (while power is on) on any MELSECNET/H remote I/O station or in the system where a CPU module supporting the online module change function is used. <br> Note that there are restrictions on the modules that can be replaced online, and each module has its predetermined replacement procedure. <br> For details, refer to the QCPU User's Manual (Hardware Design, Maintenance and Inspection) and the online module change in the manual for the module corresponding the online module change. <br> - Do not directly touch any conductive parts of the module. Doing so can cause malfunction or failure of the module. |
| :---: |
|  |  |

## [Wiring Precautions]

## WARNING

- Shut off the external power supply (all phases) used in the system before wiring.

Failure to do so may result in electric shock or damage to the product.

- After wiring, attach the included terminal cover to the module before turning it on for operation. Failure to do so may result in electric shock.

## CAUTION

- Individually ground the FG terminal of the programmable controller with a ground resistance of $100 \Omega$ or less. Failure to do so may result in electric shock or malfunction.
- Check the rated voltage and terminal layout before wiring to the module, and connect the cables correctly.
Connecting a power supply with a different voltage rating or incorrect wiring may cause a fire or failure.
- Connectors for external devices must be crimped or pressed with the tool specified by the manufacturer, or must be correctly soldered.
Incomplete connections may cause short circuit, fire, or malfunction.
- Tighten the screws within the specified torque range.

Undertightening can cause short circuit, fire, or malfunction.
Overtightening can damage the screw and/or module, resulting in drop, short circuit, or malfunction.

- Tighten any unused terminal screws within the specified torque range ( 42 to $50 \mathrm{~N} \cdot \mathrm{~cm}$ ).

Failure to do so may cause a short circuit due to contact with a solderless terminal.

- Use applicable solderless terminals and tighten them within the specified torque range.

If any spade solderless terminal is used, it may be disconnected when a terminal screw comes loose, resulting in failure.

- Prevent foreign matter such as dust or wire chips from entering the module.

Such foreign matter can cause a fire, failure, or malfunction.

- A protective film is attached to the top of the module to prevent foreign matter, such as wire chips, from entering the module during wiring.
Do not remove the film during wiring.
Remove it for heat dissipation before system operation.
- Place the cables in a duct or clamp them.

If not, dangling cable may swing or inadvertently be pulled, resulting in damage to the module or cables or malfunction due to poor contact.

- Do not install the control lines together with the communication cables.

Failure to do so may result in malfunction due to noise.

- When disconnecting the communication cable or power cable from the module, do not pull the cable by the cable part.
For the cable with connector, hold the connector part of the cable. Loosen the screws of a cable without a connector before disconnecting the cable. Failure to do so may result in damage to the module or cable or malfunction due to poor contact.

## [Startup and Maintenance Precautions]

## WARNING

Do not touch any terminal or connector while power is on.
Failure to do so may result in electric shock.

- Shut off the external power supply (all phases) used in the system before cleaning the module or retightening the terminal screws or module fixing screws.
Failure to do so may result in electric shock.
Undertightening can cause drop of the screw, short circuit, or malfunction.
Overtightening can damage the screw and/or module, resulting in drop, short circuit, or malfunction.

## [Startup and Maintenance Precautions]

## 〔 CAUTION

Before performing online operations (especially, program modification, forced output, and operating status change) for the running CPU module from the peripheral device connected, read relevant manuals carefully and ensure the safety.
Improper operation may damage machines or cause accidents.

- Do not disassemble or modify the module.

Doing so may cause failure, malfunction, injury, or a fire.

- Use any radio communication device such as a cellular phone or PHS (Personal Handy-phone System) more than 25 cm away in all directions from the programmable controller.
Failure to do so may cause malfunction.
- Do not drop or apply strong shock to the module.

Doing so may damage the module.

- Shut off the external power supply (all phases) used in the system before mounting or removing a module.
Failure to do so may cause the module to fail or malfunction.
- After the first use of the product, do not mount/remove the module to/from the base unit more than 50 times (IEC 61131-2 compliant) respectively.
Exceeding the limit may cause malfunction.
- Before handling the module, touch a conducting object such as a grounded metal to discharge the static electricity from the human body.
Failure to do so may cause the module to fail or malfunction.

## [Disposal Precautions]

| When disposing of this product, treat it as industrial waste. |
| :--- | :--- |

## OCONDITIONS OF USE FOR THE PRODUCT

(1) Mitsubishi programmable controller ("the PRODUCT") shall be used in conditions;
i) where any problem, fault or failure occurring in the PRODUCT, if any, shall not lead to any major or serious accident; and
ii) where the backup and fail-safe function are systematically or automatically provided outside of the PRODUCT for the case of any problem, fault or failure occurring in the PRODUCT.
(2) The PRODUCT has been designed and manufactured for the purpose of being used in general industries.
MITSUBISHI SHALL HAVE NO RESPONSIBILITY OR LIABILITY (INCLUDING, BUT NOT LIMITED TO ANY AND ALL RESPONSIBILITY OR LIABILITY BASED ON CONTRACT, WARRANTY, TORT, PRODUCT LIABILITY) FOR ANY INJURY OR DEATH TO PERSONS OR LOSS OR DAMAGE TO PROPERTY CAUSED BY the PRODUCT THAT ARE OPERATED OR USED IN APPLICATION NOT INTENDED OR EXCLUDED BY INSTRUCTIONS, PRECAUTIONS, OR WARNING CONTAINED IN MITSUBISHI'S USER, INSTRUCTION AND/OR SAFETY MANUALS, TECHNICAL BULLETINS AND GUIDELINES FOR the PRODUCT.
("Prohibited Application")
Prohibited Applications include, but not limited to, the use of the PRODUCT in;

- Nuclear Power Plants and any other power plants operated by Power companies, and/or any other cases in which the public could be affected if any problem or fault occurs in the PRODUCT.
- Railway companies or Public service purposes, and/or any other cases in which establishment of a special quality assurance system is required by the Purchaser or End User.
- Aircraft or Aerospace, Medical applications, Train equipment, transport equipment such as Elevator and Escalator, Incineration and Fuel devices, Vehicles, Manned transportation, Equipment for Recreation and Amusement, and Safety devices, handling of Nuclear or Hazardous Materials or Chemicals, Mining and Drilling, and/or other applications where there is a significant risk of injury to the public or property.

Notwithstanding the above, restrictions Mitsubishi may in its sole discretion, authorize use of the PRODUCT in one or more of the Prohibited Applications, provided that the usage of the PRODUCT is limited only for the specific applications agreed to by Mitsubishi and provided further that no special quality assurance or fail-safe, redundant or other safety features which exceed the general specifications of the PRODUCTs are required. For details, please contact the Mitsubishi representative in your region.

## REVISIONS

Appendix 2.4 Products manufactured by Mitsubishi Electric Engineering Co., Ltd. ..... -App - 18
Appendix 2.5 Products manufactured by Mitsubishi Electric System \& Service Co., Ltd. ..... -App - 18

- For the products shown in handbooks for transition, catalogues, and transition examples, refer to the manuals for the relevant products and check the detailed specifications, precautions for use, and restrictions before replacement.
For the products manufactured by Mitsubishi Electric Engineering Co., Ltd., Mitsubishi Electric System \& Service Co., Ltd., and other companies, refer to the catalogue for each product and check the detailed specifications, precautions for use, and restrictions before use.
The manuals and catalogues for our products, products manufactured by Mitsubishi Electric Engineering Co., Ltd., and Mitsubishi Electric System \& Service Co., Ltd. are shown in Appendix of each handbook for transition.
- Products shown in this handbook are subject to change without notice.

## generic terms and abbreviations

Unless otherwise specified, this handbook uses the following generic terms and abbreviations.

| Generic term/abbreviation | Description |
| :---: | :---: |
| -Series |  |
| A series | The abbreviation for large types of Mitsubishi MELSEC-A series programmable controllers |
| AnS series | The abbreviation for compact types of Mitsubishi MELSEC-A series programmable controllers |
| A/AnS series | A generic term for A series and AnS series |
| QnA series | The abbreviation for large types of Mitsubishi MELSEC-QnA series programmable controllers |
| QnAS series | The abbreviation for compact types of Mitsubishi MELSEC-QnA series programmable controllers |
| QnA/QnAS series | A generic term for QnA series and QnAS series |
| A/AnS/QnA/QnAS series | A generic term for A series, AnS series, QnA series, and QnAS series |
| Q series | The abbreviation for Mitsubishi MELSEC-Q series programmable controllers |
| ■CPU module type |  |
| CPU module | A generic term for A series, AnS series, QnA series, QnAS series, Q series, and L series CPU modules |
| Basic model QCPU | A generic term for the Q00JCPU, Q00CPU, and Q01CPU |
| High Performance model QCPU | A generic term for the Q02CPU, Q02HCPU, Q06HCPU, Q12HCPU, and Q25HCPU <br> * This handbook mainly explains the Q02CPU, Q02HCPU, Q06HCPU, and Q12HCPU. |
| Process CPU | A generic term for the Q02PHCPU, Q06PHCPU, Q12PHCPU, and Q25PHCPU |
| Redundant CPU | A generic term for the Q12PRHCPU and Q25PRHCPU |
| Universal model QCPU | A generic term for the Q00UJCPU, Q00UCPU, Q01UCPU, Q02UCPU, Q03UDCPU, Q04UDHCPU, Q06UDHCPU, Q10UDHCPU, Q13UDHCPU, Q20UDHCPU, Q26UDHCPU, Q03UDECPU, Q04UDEHCPU, Q06UDEHCPU, Q10UDEHCPU, Q13UDEHCPU, Q20UDEHCPU, Q26UDEHCPU, Q50UDEHCPU, and Q100UDEHCPU <br> * This handbook mainly explains about the Q00UJCPU, Q00UCPU, Q01UCPU, Q02UCPU, Q03UDCPU, Q04UDHCPU, and Q06UDHCPU, which can replace the AnS/QnAS series. <br> The specifications and functions of the Q10UDEHCPU to Q100UDEHCPU are the same as those of the modules described above, although the program and memory capacities increase. |
| LCPU | A generic term for the L02CPU, L02CPU-P, L26CPU-BT, and L26CPU-PBT |
| ■CPU module model |  |
| ACPU | A generic term for MELSEC-A series CPU modules |
| AnSCPU | A generic term for MELSEC-AnS series CPU modules |
| AnNCPU | A generic term for the A1NCPU, A1NCPUP21/R21, A1NCPUP21-S3, A2NCPU, A2NCPU-S1, A2NCPUP21/R21, A2NCPUP21/R21-S1, A2NCPUP21-S3(S4), A3NCPU, A3NCPUP21/R21, and A3NCPUP21-S3 |
| AnACPU | A generic term for the A2ACPU, A2ACPU-S1, A3ACPU, A2ACPUP21/R21, A2ACPUP21/R21-S1, and A3ACPUP21/R21 |
| AnUCPU | A generic term for the A2UCPU, A2UCPU-S1, A3UCPU, and A4UCPU |
| AnUS(H)CPU | A generic term for the A2USCPU, A2USCPU-S1, A2USHCPU-S1 |
| A/AnSCPU | A generic term for MELSEC-A series and -AnS series CPU modules |
| AnN/AnACPU | A generic term for the AnNCPU and AnACPU |
| AnN/AnA/AnSCPU | A generic term for the AnNCPU, AnACPU, and AnSCPU |
| QnACPU | A generic term for MELSEC-QnA series CPU modules |
| QnASCPU | A generic term for MELSEC-QnAS series CPU modules |

| Generic term/abbreviation | Description |
| :--- | :--- |
| QnA/QnASCPU | A generic term for MELSEC-QnA series and -QnAS series CPU modules |
| A/AnS/QnA/QnASCPU | A generic term for MELSEC-A series, -AnS series, -QnA series, and -QnAS series CPU <br> modules |
| QCPU | A generic term for MELSEC-Q series CPU modules |
| LCPU | A generic term for MELSEC-L series CPU modules |

### 1.1 Replacing with $\mathbf{Q}$ series

The Q series does not have a MELSECNET/MINI-S3 master module. For this reason, it is recommended to use the CC-Link system when replacing the MELSECNET/MINI-S3 system with the $Q$ series.

# 1.2 Suggestions for Replacement with the Remote I/O Module of CCLink System 

| Module before replacement (current status) | Module after replacement |  | Corresponding module (before replacement $\rightarrow$ after replacement) |
| :---: | :---: | :---: | :---: |
|  | Type | Outline |  |
| MELSECNET/MINI-S3compatible module (AJ35 $\square$ - $\square$ ) A2C (I/O) module (A $\square \mathrm{C})$ | CC-Link system compact type remote I/O module | - Reconfiguration of the system is easy. Selecting the best match model from the wide selection of modules for a module before replacement is possible. | (All models) |
|  | CC-Link system remote I/O module (A2C shape) | - Module mounting size is the same. <br> This A2C shape CC-Link I/O module has the same shape (same mounting dimensions) with A2C (I/O) module. No processing for mounting holes is required when replacing the module. <br> - I/O signal wiring is the same. Since the terminal block of the same shape is used, I/O signal wiring is the same. ${ }^{* 1}$ <br> - Optional products are available. The A6DIN1C and A2CCOM-TB (sold separately) are available. If the A2C (I/O) is used before replacement, it can be utilized. | AX41C/AX81C <br> $\rightarrow$ AJ65DBTB1-32D <br> AY51C <br> $\rightarrow$ AJ65DBTB1-32T1 <br> AX40Y50C <br> $\rightarrow$ AJ65DBTB1-32DT1 <br> AY13C <br> $\rightarrow$ AJ65DBTB1-32R <br> AX40Y10C <br> $\rightarrow$ AJ65DBTB1-32DR |
|  | CC-Link system remote I/O module | - Change in wiring is unnecessary. By using a wiring conversion adapter, terminal block of the module before replacement can be utilized to the module after replacement ${ }^{* 2}$ (regarding communication cable and power cable, wiring change is required). | AJ35TB1-16D <br> $\rightarrow$ AJ65BTB1-16D <br> AJ35TB2-16D <br> $\rightarrow$ AJ65BTB2-16D <br> AJ35TB1-16T <br> $\rightarrow$ AJ65BTB1-16T |

*1 Man-hour taken for wiring change can be reduced since wiring to the external device can also be used by partially changing the wiring of power cable and communication cable.

Remove the wiring terminal block from existing I/O module.

*2 Image figure of replacement using wiring conversion adapter

### 1.3 Suggestions for Replacement with Renewal tool for A0J2

### 1.3.1 Advantages of using renewal tool for A0J2 (manufactured by Mitsubishi Electric System \& Service Co., Ltd.)

(1) The MELSECNET/MINI-S3 system can be replaced with CC-Link without changing existing wiring.

Although the CPU module, A/QnA series is replaced with the Q series, the external wiring terminal block attached to the existing MELSECNET/MINI-S3 I/O module*1 can be utilized to the interface module. It allows to replace the modules without external wiring change. (The module is replaced with FCN connector type DC input/output module of CC-Link.)
Also, new wiring is unnecessary since the CC-Link I/O module is connected to the interface module with dedicated cable.
*1: The MELSECNET/MINI-S3 compact type remote I/O module is the target module.
(Before replacement)

(After replacement)

## ©POINT

For specifications comparison and functional comparison between the existing MELSECNET/MINI-S3 compact type remote I/O module and the renewal tool for A0J2 after replacement, refer to APPENDICES.

## (2) Processing the mounting holes is unnecessary.

Mounting dimensions of the base adapter included with renewal tool for A0J2 is the same with dimensions of existing A0J2 I/O module. Replacement without processing the mounting holes is possible.
(3) I/O address change is unnecessary.

By replacing the MELSECNET/MINI-S3 compact type remote I/O module with FCN connector type DC input/output module of CC-Link, the I/O address assignment of the MELSECNET/MINI-S3 compact type remote I/O module can be utilized.
It eliminates I/O address change and allows substantial reduction of program correction.

## QPOINT

1) Renewal tool for A0J2

This tool is used for the following replacement.

- Replacing the A0J2 (H) system with Q series
- Replacing the A0J2 (H) system with AnS series
- Replacing the MELSECNET/MINI-S3 compact type remote I/O module with FCN connector type DC input/output module of CC-Link
It is composed of interface module to which wiring terminal block of existing I/O module can be attached and base adapter for utilizing the existing mounting hole, etc. Installation method can be selected according to the installation space.

2) Interface module

This module has the conversion function that converts DC output into relay output or AC input into DC input. Therefore, it can be replaced in combination with FCN connector type DC input/output module of CC-Link.
Wire between the interface module and the CC-Link I/O module with dedicated connection cable. (List of models supporting interface module)

| Discontinued modules (MELSECNET/MINI(-S3)) |  | Alternative modules (CC-Link) |  |
| :--- | :--- | :--- | :--- |
| Product name | Model name | Alternative programmable controller I/O module | Interface module |
| Output module | AJ35PTF-24R | AJ65SBTCF1-32T | SC-A0JQIF24R |
|  | AJ35PTF-28DR | AJ65SBTCF1-32D, AJ65SBTCF1-32T | SC-A0JQIF28DR |
|  | AJ35PTF-28DT | AJ65SBTCF1-32D, AJ65SBTCF1-32T | SC-A0JQIF28DT |
|  | AJ35PTF-56AR | AJ65SBTCF1-32D, AJ65SBTCF1-32T | SC-A0JQIF56AR |
|  | AJ35PTF-56DR | AJ65SBTCF1-32D, AJ65SBTCF1-32T | SC-A0JQIF56DR |
|  | AJ35PTF-56DT | AJ65SBTCF1-32D, AJ65SBTCF1-32T | SC-A0JQIF56DT |

### 1.3.2 Proposal of replacement with renewal tool for A0J2

## (1) Building-up type

The CC-Link I/O module can be built up to the existing panel if there is room for depth in front of existing module, and can be installed on the installation surface of the existing panel.
(Before replacement)

(After replacement) ${ }^{* 1}$

*1: Up to two interface modules can be used for each renewal tool for A0J2.

## (2) Horizontal type

The CC-Link I/O module can be installed horizontally, if there is room above the existing module.

*1: Up to two interface modules can be used for each renewal tool for A0J2.

## (3) Separate type

Only the CC-Link I/O module can be installed separately (Only this method is available for the AnS series).

## Remark

Other than CC-Link, replacement to the QCPU or AnSCPU is possible.
For details, contact your local Mitsubishi sales representative. (refer to Section 1.5).

### 1.4 Precautions for Replacement

(a) Before replacing MELSECNET/MINI-S3 with CC-Link, be sure to refer to the manuals for each of the CC-Link modules, and confirm the functions, specifications and methods of use of the modules.
(b) For replacement using renewal tool for $\mathbf{A 0 J} 2$, always refer to the following manual. Select correct products after checking the functions, specifications, and usage. (Reference manual)

- Renewal tool for A0J2 series transition from MELSEC-A0J2(H) series to renewal system using renewal tool (Refer to Appendix 2.5.)
(c) When stations installing a MELSECNET/MINI-S3 - CC-Link module wiring conversion adapter to the CC-Link remote I/O module (AJ65BTB1-16D, AJ65BTB2-16D or AJ65BTB116 T ) is mixed, the maximum number of connected modules is 32 with the use of a version 1.10 compatible CC-Link dedicated cable.
(No restrictions when using cables other than a version 1.10 compatible CC-Link dedicated cable.)
(d) After replacing MELSECNET/MINI-S3 with CC-Link, be sure to check operation of the entire system before starting actual operation.

### 1.5 Contact of the Relevant Products

Renewal tool manufactured by Mitsubishi Electric Engineering Co., Ltd.
For products manufactured by Mitsubishi Electric Engineering Co., Ltd., contact your local sales representative.

```
Introduction of "replacement of MELSEC-A series, system renewal service, and renewal tool for
A0J2"
For replacement of MELSEC-A series and system renewal service, contact your local sales
representative.
```

## PERFORMANCE SPECIFICATIONS COMPARISONS

### 2.1 Performance Specifications Comparisons between MELSECNET/MINI-S3 and CC-Link

| Item | Specifications |  | Compatibility | Precautions for replacement |
| :---: | :---: | :---: | :---: | :---: |
|  | MELSECNET/MINI-S3 | CC-Link |  |  |
|  | 64 stations (8 points/station) | 64 stations (32 points/station) | O |  |
|  | 1024 points *1 | 4096 points + 512 words | $\bigcirc$ |  |
| Number of master modules mounted | Max. 64 modules (according to the specifications for the CPU module used.) | When setting parameters with GX <br> Developer: 8 modules ${ }^{*} 2^{*} 3^{*} 4$ <br> When setting parameters with dedicated instructions: Max. 64 modules (according to the specifications for the CPU module used.) | O |  |
| Communication speed | 1.5 Mbps | 156k/625k/2.5M/5M/10Mbps | $\bigcirc$ |  |
| Transmission method | Ring | Bus | $\times$ | New cable must be laid. |
| Overall cable distance | No restriction | 1200 m (at 156kbps) | $\times$ | When the transmission distance exceeds 1200m, use a CC-Link repeater module. |
| Max. transmission distance between stations | Optical data link: $50 \mathrm{~m}(35 \mathrm{~m})^{* 5}$ <br> Twisted pair data link: $100 \mathrm{~m}(50 \mathrm{~m})^{* 6}$ | 1200 m (at 156kbps) | $\bigcirc$ |  |
| Number of occupied I/O points per stations | In I/O dedicated mode: 32 points In extended mode: 48 points | 32 points | $\bigcirc$ |  |

## 2 <br> PERFORMANCE SPECIFICATIONS COMPARISONS

*1: When 16 separate refresh type remote I/O modules AJ35PTF-128DT (number of occupied stations: 4) are connected, 1024 I/O points each can be controlled.
*2: The following CPU modules have the restriction of the number of modules mounted.

- Q00J/Q00/Q01CPU: 2
- Q00UJ/Q00U/Q01UCPU: 2
- Q02UCPU: 4
*3: When more than 4 modules are used by the parameter setting in GX Developer, refer to the following to check the version for the CPU module and GX Developer.
- MELSEC-Q CC-Link System Master/Local Module User's Manual
*4: Total number of CC-Link master stations and local stations.
*5: When a 2VTPE-1 optical combined vinyl-insulated sheath cable (manufactured by Mitsubishi Cable Industries, Ltd.) is used, the max. transmission distance between stations is 35 m .
*6: The max. transmission distance between stations varies according to the size of the twisted pair cable.
$0.2 \mathrm{~mm}^{2}$ or more to less than $0.5 \mathrm{~mm}^{2} \ldots 50 \mathrm{~m}$,
$0.5 \mathrm{~mm}^{2}$ or more ... 100 m

### 2.2 Wiring in CC-Link

New cables must be laid when replacing MELSECNET/MINI-S3 with CC-Link as the two systems differ in the applicable cable types.

### 2.2.1 CC-Link Ver. 1.00 cable specifications

(1) Connection method

In the CC-Link system, the terminal resistor to be connected varies according to the cable to be used.

| Cable type | Terminal resistor |
| :--- | :---: |
| CC-Link dedicated cable | $110 \Omega \quad 1 / 2 \mathrm{~W}$ (brown/brown/brown) |
| CC-Link dedicated high-performance cable | $130 \Omega \quad 1 / 2 \mathrm{~W}$ (brown/orange/brown) |

(2) Cable length between stations, max. overall cable length

1) When the system is composed of only remote $I / O$ stations and remote device stations

*1: Cable length between remote I/O stations or remote device stations
*2: Cable length between master station and next stations

CC-Link dedicated cable (110 $\Omega$ used as terminal resistor)

| Transmission speed | Cable length between stations |  | Max. overall cable length |
| :---: | :---: | :---: | :---: |
|  | *1 | *2 |  |
| 156kbps | 30 cm or more | 1 m or more | 1200m |
| 625kbps |  |  | 600m |
| 2.5Mbps |  |  | 200m |
| 5Mbps | 30 cm to $59 \mathrm{~cm}{ }^{*}$ |  | 110m |
|  | 60 cm or more |  | 150m |
| 10Mbps | 30 cm to $59 \mathrm{~cm}{ }^{*}$ |  | 50 m |
|  | 60 cm to $99 \mathrm{~cm} *$ |  | 80m |
|  | 1 m or more |  | 100m |

CC-Link dedicated high-performance cable (130 $\Omega$ used as terminal resistor)

| Transmission speed |  | Cable length between stations |  | Max. overall cable length |
| :---: | :---: | :---: | :---: | :---: |
|  |  | *1 | *2 |  |
|  |  | 30 cm or more | 1 m or more | 1200m |
|  |  |  |  | 900m |
|  |  |  |  | 400m |
|  |  |  |  | 150m |
| 10Mbps | Number of connected modules :1 to 32 |  |  | 100m |
|  | Number of | 30 cm to $39 \mathrm{~cm} *$ |  | 80m |
|  | connected <br> modules : 33 to 48 | 40 cm or more |  | 100m |
|  | Number of | 30 cm to $39 \mathrm{~cm} *$ |  | 20m |
|  | connected | 40 cm to 69 cm * |  | 30 m |
|  | modules :49 to 64 | 70 cm or more |  | 100m |

* When an actual cable length between remote I/O stations or remote device stations is in this range at even one location, the above max. overall cable length applies.

2) When the system is composed of remote I/O stations, remote device stations, local stations, and intelligent device stations

*1: Cable length between remote I/O stations or remote device stations
*2: Cable length between master/local stations or intelligent device stations and next stations

CC-Link dedicated cable ( $110 \Omega$ used as terminal resistor)

| Transmission speed | Cable length between stations |  | Max. overall cable length |
| :---: | :---: | :---: | :---: |
|  | ${ }^{*} 1$ | *2 |  |
| 156kbps | 30 cm or more | 2 m or more | 1200m |
| 625kbps |  |  | 600m |
| 2.5 Mbps |  |  | 200m |
| 5Mbps | 30 cm to 59cm* |  | 110m |
|  | 60 cm or more |  | 150m |
| 10Mbps | 30 cm to $59 \mathrm{~cm} *$ |  | 50m |
|  | 60 cm to 99 cm * |  | 80m |
|  | 1 m or more |  | 100m |

CC-Link dedicated high-performance cable ( $130 \Omega$ used as terminal resistor)

| Transmission speed | Cable length between stations |  | Max. overall cable length |
| :---: | :---: | :---: | :---: |

| 10Mbps | 70 cm to $99 \mathrm{~cm}{ }^{*}$ |  | 50m |
|  | 1 m or more |  | 80m |

* When an actual cable length between remote I/O stations or remote device stations is in this range at even one location, the above max. overall cable length applies.

PERFORMANCE SPECIFICATIONS COMPARISONS

### 2.2.2 CC-Link Ver.1.10 cable specifications

## (1) Connection method

| Cable type | Terminal resistor |
| :---: | :---: |
| Ver1.10-compatible CC-Link dedicated cable | $110 \Omega 1 / 2 \mathrm{~W}$ (brown/brown/brown) |

(2) Cable length between stations, max. overall cable length

Ver.1.10-compatible CC-Link dedicated cable ( $110 \Omega$ used as terminal resistor)

| Transmission speed | Cable length between stations | Max. overall cable length |
| :---: | :---: | :---: |
| 156 kbps | 1200 m |  |
| 625 kbps |  | 900 m |
| 2.5 Mbps |  | 400 m |
| 5 Mbps |  | 160 m |
| 10 Mbps |  | 100 m |

## FUNCTIONAL COMPARISONS

### 3.1 Functional Comparisons between MELSECNET/MINI-S3 and CC-Link

| Item |  | Specifications |  | Compati- <br> bility | Precautions for replacement |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | MELSECNET/MINI-S3 | CC-Link |  |  |
| Communication with remote station |  | Communication with batch refresh type remote I/O modules, separate refresh type remote I/O modules and remote terminal modules is possible. | Communication with remote I/O stations, remote device stations, local stations, and intelligent device stations is possible. | $\times$ | Create new programs as the two systems are not compatible in the program. |
|  |  | Communications with all stations sometimes is discontinued when an error occurs on even one station. The faulty station is detected on the master station and is stored to buffer memory. | Only the faulty station is disconnected, and communication with other stations is continued normally. <br> The faulty station is detected on the master station and is stored to buffer memory. | $\triangle$ | The method of confirmation is different. Review the program. |
|  | $\begin{aligned} & \stackrel{\rightharpoonup}{0} \\ & \stackrel{0}{0} \\ & \stackrel{\otimes}{\leftrightharpoons} \end{aligned}$ | Breakage of the optical cables and twisted pair cables can be checked by changing the operation mode of the master station. | Breakage of twisted pair cables can be checked by changing the operation mode of the master station. | $\triangle$ |  |
| Others | Monitor <br> station <br> function | The I/O status of the remote I/O module can be monitored by the LEDs on the master station. | None | $\times$ | Connect the programming tool and check by the device monitor. |

## 4 <br> REPLACING MASTER MODULE/REMOTE MODULE

### 4.1 Replacing Master Module

### 4.1.1 List of alternative master module models

| MELSECNET <br> di | NI-S3 models to be ontinued | Alternative model for CC-Link |  |
| :---: | :---: | :---: | :---: |
| Product name | Model name | Model name | Remarks (restrictions) |
| Master module | AJ71PT32-S3 | QJ61BT11N | Examine replacement with CC-Link. <br> For details, refer to the User's Manual for the respective module. |
|  | AJ71T32-S3 |  |  |
|  | A1SJ71PT32-S3 |  |  |
|  | A1SJ71T32-S3 |  |  |

### 4.2 Replacing Remote Module

CC-Link does not have a remote module that uses a building block type I/O module. When changing the remote module, it is recommended to replace with the respective remote modules or a local station (QCPU+QJ61BT11N) of CC-Link.

### 4.2.1 List of alternative remote module models

| MELSECNET/MINI-S3 models to be <br> discontinued |  | Alternative models for CC-Link |  |
| :---: | :--- | :--- | :--- |
| Product name | Model name | Model name | Remarks (restrictions) |
| Remote module | AJ72PT35 | None | It is recommended to replace with the respective remote <br> module or a local station*1 <br> Link. |
|  | AJCPU+QJ31BT11N) of CC- |  |  |

*1: A program is required for local station QJ61BT11N as it cannot directly control I/O modules.
For this reason, the following system changes are required.

## REPLACING I/O MODULE

### 5.1 List of Aternative I/O Module Models

### 5.2 I/O Module Specifications Comparison

### 5.2.1 Input module specifications comparison

(1) Specifications comparison between AX11C and AJ65SBTB2N-16A

| Specifications |  | AX11C | AJ65SBTB2N-16A | Compatibility | Precautions for replacement |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Number of input points |  | 32 points | 16 points | $\times$ | When seventeen or more points are used, use two AJ65SBTB2N-16A modules. |
| Insulation method |  | Photocoupler | Photocoupler | $\bigcirc$ |  |
| Rated input voltage |  | 100-120VAC, $50 / 60 \mathrm{~Hz}$ | 100-120VAC, $50 / 60 \mathrm{~Hz}$ | $\bigcirc$ |  |
| Rated input current |  | Approx. 6mA (100VAC, 60Hz) | Approx. 7 mA (100VAC, 60Hz) | $\bigcirc$ |  |
| Operating voltage range |  | $\begin{gathered} 85 \text { to 132VAC } \\ (50 / 60 \mathrm{~Hz} \pm 5 \%) \end{gathered}$ | 85 to 132 VAC $(50 / 60 \mathrm{~Hz} \pm 3 \%$, distortion rate $5 \%$ within) | O |  |
| Maximum number of simultaneous input points |  | $75 \%$ simultaneously ON (at 110VAC) | 100\% simultaneously ON <br> (at 110VAC) <br> 60\% simultaneously ON (at 132VAC) | O |  |
| Inrush current |  | Max. 200 mA , within 1 ms (with 132VAC) | Max. 200 mA , within 1 ms (with 132VAC) | $\bigcirc$ |  |
| ON voltage/ON current |  | 80 V or more/5mA or more | 80 V or more/5mA or more | $\bigcirc$ |  |
| OFF voltage/OFF current |  | 30 V or less/1mA or less | 30 V or less/ 1.7 mA or less | $\bigcirc$ |  |
| Input impedance |  | Approx. $18 \mathrm{k} \Omega(60 \mathrm{~Hz})$, <br> Approx. $21 \mathrm{k} \Omega(50 \mathrm{~Hz})$ | Approx. $15 \mathrm{k} \Omega(60 \mathrm{~Hz})$, <br> Approx. $18 \mathrm{k} \Omega(50 \mathrm{~Hz})$ | $\bigcirc$ |  |
| Response time | $\mathrm{OFF} \rightarrow \mathrm{ON}$ | 15 ms or less ( $100 \mathrm{VAC}, 60 \mathrm{~Hz}$ ) | 20 ms or less ( $100 \mathrm{VAC}, 60 \mathrm{~Hz}$ ) | $\bigcirc$ |  |
|  | ON $\rightarrow$ OFF | 30 ms or less (100VAC, 60Hz) | 20 ms or less (100VAC, 60Hz) | $\bigcirc$ |  |
| Common terminal arrangement |  | 16 points/common | 16 points/common (2-wire type) | $\bigcirc$ |  |
| Number of occupied stations (number of occupied points) |  | 4 stations <br> (4 stations $\times 8$ points) | $\begin{gathered} 1 \text { station } \\ (1 \text { station } \times 32 \text { points }) \end{gathered}$ | $\times$ | The number of points assigned per module is not changed. |
| Operation indication |  | ON indication (LED) | ON indication (LED) | $\bigcirc$ |  |
| External connection method |  | 50-point terminal block <br> (M3.5 $\times 7$ screws) <br> Transmission circuit part included | Transmission/module power supply parts: <br> 7-point terminal block (M3 $\times 5.2$ screws) I/O part: <br> 34-point terminal block (M3 $\times 5.2$ screws) | $\times$ | Change in wiring is required. |

### 5.3 Precautions for Replacement of I/O Module

## (1) Wiring

(a) Wire gauge and size of solderless terminals

As CC-Link supports compact modules and terminal blocks, the wire gauge and size of the solderless terminals applicable to terminal blocks differ from those that can be used on the MELSECNET/MINI-S3, A2C(I/O).
For this reason, when replacing the existing system with CC-Link, use wires and solderless terminals that meet the CC-Link specifications.
(b) Input method

Contents of the "Input method" item in the "Specifications" column for input modules and I/O modules in Section 5.2 are described below.
Positive common (Sink type) : means that DC power + is connected to the common terminal.
Negative common (Source type) : means that DC power - is connected to the common terminal.
Positive/negative common shared type (Sink/source shared type):
means that either DC power + or DC power - is connected to the common terminal.
(c) Using wiring conversion adapter

When installing a MELSECNET/MINI-S3-CC-Link module wiring conversion adapter to the CC-Link remote I/O module (AJ65BTB1-16D, AJ65BTB2-16D or AJ65BTB1-16T), the external dimensions are increased by 5.1 mm ( 0.20 inch ) (height) and 28.5 mm (1.12inch) (depth).
If the connected cable is not long enough, wiring to the CC-Link remote I/O module cannot be made.
(2) External wiring connector
(a) Purchasing external wiring connectors

At the CC-Link 32-point connector type I/O module, the external wiring connector is not included in the package. The external wiring connector (A6CON $\square$ ) must be purchased separately.
(3) Tightening module mounting screws and terminal block screws

Tighten module mounting screws and terminal block screws within the range described below. Tightening screws too much may cause damage to the module case. For details, refer to each product manual.
(a) CC-Link system compact type remote I/O module

For terminal block type, one-touch connector type, and FCN connector type remote I/O module

| Screw | Tightening torque range |
| :--- | :---: |
| Module mounting screw (M4 screw with plain washer finished round) | 78 to $108 \mathrm{~N} \cdot \mathrm{~cm}$ |
| Terminal block screw (M3 screw) | 59 to $88 \mathrm{~N} \cdot \mathrm{~cm}$ |
| Terminal block mounting screw (M3.5 screw) | 68 to $98 \mathrm{~N} \cdot \mathrm{~cm}$ |

(b) CC-Link system remote I/O module (A2C shape)

| Screw | Tightening torque range |
| :--- | :---: |
| Module mounting screw (M4 screw with plain washer finished round) | 78 to $108 \mathrm{~N} \cdot \mathrm{~cm}$ |
| Terminal block screw (M3.5 screw) | 68 to $92 \mathrm{~N} \cdot \mathrm{~cm}$ |
| Terminal block mounting screw (M4 screw) | 102 to $138 \mathrm{~N} \cdot \mathrm{~cm}$ |

(c) CC-Link system remote I/O module

| Screw | Tightening torque range |
| :--- | :---: |
| Module mounting screw (M4 screw) | 78 to $118 \mathrm{~N} \cdot \mathrm{~cm}$ |
| Terminal block screw (M3.5 screw) | 59 to $88 \mathrm{~N} \cdot \mathrm{~cm}$ |
| Terminal block mounting screw (M4 screw) | 78 to $118 \mathrm{~N} \cdot \mathrm{~cm}$ |

(d) Wiring conversion adapter

| Screw | Tightening torque range |
| :--- | :---: |
| Adapter, Terminal block mounting screw (M4 screw) | 78 to $118 \mathrm{~N} \cdot \mathrm{~cm}$ |
| CTL + terminal screw (M3 screw) | 49 to $78.4 \mathrm{~N} \cdot \mathrm{~cm}$ |

(4) Precautions for input module (specifications change)
(a) The rated input current

Some CC-Link modules support a smaller rated input current than MELSECNET/MINI-S3,A2C(I/O) modules do. Confirm the specifications of the sensors or switches to be connected before use.
(b) The rated voltage value

CC-Link's DC input module is dedicated for use at 24VDC.
Confirm the specifications of the sensors or switches to be connected before use.
(c) The common terminal arrangement

Use caution when using voltages that differ depending on each common as the common terminal arrangement may differ between the CC-Link and the MELSECNET/MINI-S3, A2C(I/O).

## (5) Precautions for output module (specifications change)

(a) The output current values

Some CC-Link modules support a smaller output current than MELSECNET/MINI-S3,A2C(I/O) modules do. Before using an output module having a smaller output current on CC-Link, confirm the specifications on the load side.
(b) The common terminal arrangement

Use caution when using voltages that differ depending on each common as the common terminal arrangement may differ between the CC-Link and the MELSECNET/MINI-S3, A2C(I/O).
(c) The common maximum load current

Sometimes the maximum load current per common differs between CC-Link and MELSECNET/ MINI-S3,A2C(I/O). Check the maximum load current per common before use.

## REPLACING ANALOG I/O MODULE

### 6.1 List of Alternative Analog I/O Module Models

| MELSECNET/MINI-S3, A2C models to be discontinued |  | Replacement to CC-Link |  |

## (b) Functional comparisons

| Item | A68ADC | AJ65BT-64AD | Compatibility | Precautions for replacement |
| :---: | :---: | :---: | :---: | :---: |
| Averaging <br> processing A/D <br> conversion <br> system | A/D conversion is performed according to set times or set processing time on a channel, which is specified for the averaging processing to be performed on by the programmable controller CPU. After the conversion, the maximum and minimum values are removed, and the remaining total is averaged and the results are stored in the buffer memory. | A/D conversion is performed according to the preset number of times or preset time on each channel, the A/D conversion data obtained during that time is averaged, and the average value is stored to the remote register as a digital output value. | $\bigcirc$ |  |
| Specification of channel to use | The A68ADC has an 8 channels of the A/ D conversion circuit. Execution/nonexecution of the A/D conversion can be specified on each of those channels. With the programmable controller CPU, the channel to execute A/D conversion on is specified to address 0 (specification of channel to use) of the buffer memory. | Enable (execute)/disable (do not execute) $A / D$ conversion is specified on each channel. (default: execution on all channels disabled) <br> By making unused channels conversion prohibited, sampling time can be shortened. | $\bigcirc$ |  |
| Offset/gain setting | Changes the I/O conversion characteristics. | Changes the I/O conversion characteristics. For that, offset/gain settings can be configured for each channel without a aid of a various register. | $\bigcirc$ |  |

(c) Programmable controller CPU I/O signal comparisons

I/O signal is different, so the sequence program must be changed.
For details on I/O signals and sequence programs, refer to the User's Manual.

### 6.2.2 Analog output module comparison

(1) Comparisons between A64DAVC and AJ65BT-64DAV
(a) Performance specifications comparisons

O : Compatible, $\triangle$ : Partial change required, $\times$ : Not compatible

(b) Functional comparisons

| Item | A64DAVC | AJ65BT-64DAV | Compatibility | Precautions for replacement |
| :---: | :---: | :---: | :---: | :---: |
| Analog output enable signal | With the analog output enable signals $(\mathrm{Yn}+18$ to $\mathrm{Yn}+1 \mathrm{~B})$, it is possible to select the type of output values at each channel from D/A converted analog values and output offset values. | By turning the analog output enable signal ON or OFF with the sequence program, it is possible to select the type of output values at each channel from D/ A converted analog values and output offset values. <br> Note, however, that the D/A conversion time (conversion speed) is fixed regardless of the setting of the analog output enable signal. | $\bigcirc$ |  |
| Analog output enable/disable setting | Stores the channel to disable analog output from ( $0 \mathrm{~V} / 0 \mathrm{~mA}$ ) in the buffer memory of the A64DAVC. | By writing "0" or "1" to the address of the remote register using the sequence program, it is possible to select on each channel whether to enable or disable outputs of analog values. | $\bigcirc$ |  |
| HOLD/CLEAR setting | In preparation for the event that the programmable controller CPU enters a stop status or an error status, select HOLD or CLEAR (offset values or OV/ 0 mA ) analog values that are stored before a stop or an error occurrence using the HOLD/CLEAR terminal. | In preparation for the event that the programmable controller CPU enters a stop status or the AJ65BT-64DAV stops D/A conversion due to an error, the HLD/CLR terminal can be used to select whether to hold or clear analog values (output offset values) that are being output from each channel right before those stops. The HLD/CLR terminal is provided on the front of the module and this selection can be made on all channels at once. <br> (Including the case of the disconnections of link communication) | O |  |
| Offset/gain setting | Changes the I/O conversion characteristics. | I/O conversion characteristics can be changed as desired when the detailed ones are required. To do this, short the test mode terminal to enter a test mode, and configure the offset/gain settings for each channel without a aid of a various register. Also, if detailed I/O conversion characteristics are not required, the default offset/gain values can be used by turning on the I/O signal RYn4 (offset/ gain selection) to the master station. | $\bigcirc$ |  |

## (c) Programmable controller CPU I/O signal comparisons

I/O signal is different, so the sequence program must be changed.
For details on I/O signals and sequence programs, refer to the User's Manual.

## (4) Comparisons between A64DAIC and AJ65BT-64DAI

(a) Performance specifications comparisons

O : Compatible, $\triangle$ : Partial change required, $\times$ : Not compatible

(b) Functional comparisons

O: Compatible, $\triangle$ : Partial change required, $x$ : Not compatible

| Item | A64DAIC | AJ65BT-64DAI | Compatibility | Precautions for replacement |
| :---: | :---: | :---: | :---: | :---: |
| Analog output enable signal | With the analog output enable signals ( $\mathrm{Y} \mathrm{n}+18$ to $\mathrm{Yn}+1 \mathrm{~B}$ ), it is possible to select the type of output values at each channel from D/A converted analog values and output offset values. | By turning the analog output enable signal ON or OFF with the sequence program, it is possible to select the type of output values at each channel from D/ A converted analog values and output offset values. <br> Note, however, that the D/A conversion time (conversion speed) is fixed regardless of the setting of the analog output enable signal. | O |  |
| Analog output enable/disable setting | Stores the channel to disable analog output from ( $0 \mathrm{~V} / 0 \mathrm{~mA}$ ) in the buffer memory of the A64DAIC. | By writing "0" or "1" to the address of the remote register using the sequence program, it is possible to select on each channel whether to enable or disable outputs of analog values. | O |  |
| HOLD/CLEAR setting | In preparation for the event that the programmable controller CPU enters a stop status or an error status, the HOLD/ CLEAR terminal can be used to select HOLD or CLEAR (offset values or OV/ OmA) analog values that are stored before a stop or an error occurrence. | In preparation for the event that the programmable controller CPU enters a stop status or the AJ65BT-64DAI stops D/A conversion due to an error, the HLD/CLR terminal can be used to select whether to hold or clear analog values (output offset values) that are being output from each channel right before those stops. The HLD/CLR terminal is provided on the front of the module and this selection can be made on all channels at once. (Including the case of the disconnections of link communication) | O |  |
| Offset/gain setting | Changes the I/O conversion characteristics. | I/O conversion characteristics can be changed as desired when the detailed ones are required. To do this, short the test mode terminal to enter a test mode, and configure the offset/gain settings for each channel without a aid of a various register. Also, if detailed I/O conversion characteristics are not required, the default offset/gain values can be used by turning on the I/O signal RYn4 (offset/ gain selection) to the master station. | O |  |

## (c) Programmable controller CPU I/O signal comparisons

I/O signal is different, so the sequence program must be changed.
For details on I/O signals and sequence programs, refer to the User's Manual.

## REPLACING THE HIGH-SPEED COUNTER MODULE

### 7.1 List of Alternative High-speed Counter Module Models

| MELSECNET/MINI-S3, A2C models to be discontinued |  | Alternative model for CC-Link |  |
| :---: | :---: | :---: | :---: |
| Product name | Model name | Model name | Remarks (restrictions) |
| High-speed counter module | AD61C | AJ65BT-D62 | 1) Change in external wiring: Wiring change due to differences in terminal blocks, communication cable change to CC-Link dedicated cable, applicable wire size change of signal wire <br> 2) Change in number of modules: Not required <br> 3) Change in program: Change to programs for CC-Link <br> 4) Change in performance specifications: Change in interface specifications of coincidence output <br> 5) Change in functional specifications: Not required <br> 6) Change in dimensions for mounting to the panel: Required |
|  | AD62C |  | 1) Change in external wiring: Wiring change due to differences in terminal blocks, communication cable change to CC-Link dedicated cable, applicable wire size of signal lead change <br> 2) Change in number of modules: Not required <br> 3) Change in program: Change to programs for CC-Link <br> 4) Change in performance specifications: Counting range change, external output specifications change <br> 5) Change in functional specifications: Limit switch output function not provided <br> 6) Change in dimensions for mounting to the panel: Required |

### 7.2 High-speed Counter Module Comparison

(1) Comparison between AD61C and AJ65BT-D62
(a) Performance specifications comparisons

## (b) Functional comparisons

$O$ : Compatible, $\triangle$ : Partial change required, $x$ : Not compatible

| Item | AD61C | AJ65BT-D62 | Compatibility | Precautions for replacement |
| :---: | :---: | :---: | :---: | :---: |
| Count function at 1-phase/ 2-phase pulse input | - Captures 1-phase or 2-phase pulses from a pulse generator, and counts each of these pulses at its rise and fall. 1-phase input . . . Two counts are performed on a single pulse. 2-phase input . . . Four counts are performed on a single pulse at each of the $A$ and $B$ phases. <br> - Specifies the addition and subtraction counts in buffer memory during 1 -phase input. During 2-phase input, it is automatically judged to perform addition when the A phase pulse comes before the B phase pulse, and perform subtraction when the $B$ phase pulse comes before the A phase pulse. | - Captures 1-phase or 2-phase pulses from a pulse generator, and counts each of these pulses at its rise and fall. <br> 1-phase input . . . Two counts are performed on a single pulse. 2-phase input . . . Four counts are performed on a single pulse at each of the $A$ and $B$ phases. <br> - Specifies the addition and subtraction counts to RY during 1-phase input. During 2-phase input, it is automatically judged to perform addition when the A phase pulse comes before the $B$ phase pulse, and perform subtraction when the $B$ phase pulse comes before the A phase pulse. | $\bigcirc$ |  |
| Comparison signal output function for counter value | - Compares the counter value with the set value, and outputs result signals of small, large (>, <), or coincidence ( $=$ ) to the programmable controller CPU. <br> - Performs external outputs of the coincidence signal to the external (EQU) terminal when the set value coincides with the count value. Note, however, that to do this the coincidence signal output enable flag must be turned ON beforehand by the sequence program. | Sets the output status of any channel in advance, and compares it with the current value to output ON/OFF signals. | O |  |
| Preset function | - Changes the current counter value <br> - Execution of a preset is performed an external preset. | to the specified value. by the sequence program or input of | O |  |
| Ring counter function | - Outputs the coincidence signal when the set value matches the counter value, and set the current value as the preset value. Note, however, that to do this the ring counter switch must be turned ON. | Counts repeatedly between the ring counter value and the preset value by the ring counter command. | $\bigcirc$ |  |
| Count start/ stop function by external input | - Starts or stops counting by the external disable (DIS) terminal turning ON/OFF. | - | $\triangle$ | This is performed on the function start terminal. |
| Hardware reset function | - Initializes (clears data and sets default value) AD61C I/O signals and buffer memory by the reset switch on the front of the AD61C. | - | $\times$ | This function is not available. |
| Error detection function | - Stores the first error to buffer memory if any errors are found in communication (FROM/TO instructions) from the programmable controller CPU to buffer memory on AD61C. | - | $\times$ | This function is not available. |

## (c) Programmable controller CPU I/O signal comparisons

The sequence program must be changed as the I/O signals differ.
For details on I/O signals and sequence programs, refer to the User's Manual.

*1, *2: These input signals are used on the A2CCPU side.
(d) Buffer memory addresses comparisons

The sequence program must be changed as the buffer memory assignments differ.
For details on buffer memory and sequence programs, refer to the User's Manual.

REPLACING THE COMMUNICATION MODULES

### 8.1 List of Alternative Communication Module Models

| MELSECNET/MINI-S3, A2C models to be discontinued |  | Alternative models for CC-Link |  |
| :---: | :---: | :---: | :---: |
| Product name | Model name | Model name | Remarks (restrictions) |
| Serial Communication | AJ35PTF-R2 | AJ65BT-R2N | 1) Change in RS-232C cable ( 25 -pin $\rightarrow 9$-pin) <br> 2) Change in general-purpose I/O specifications (power voltage range, number of points) <br> 3) Change is required as the program is not compatible. |
| Operating box | AJ35T-OPB-P1-S3 | None | Transition to GOT is recommended. |
|  | AJ35PT-OPB-M1-S3 | None |  |
| Cable for operating box | AC30MINI | None |  |
| Joint box | AJ35T-JB-S3 | None |  |
| Transmission converter | AJ35PTC-CNV | AJ65SBT-RPS | New cable must be used as the two systems differ in cable types. |

### 8.2 Serial Communication Module Comparisons

(1) Comparisons between AJ35PTF-R2 and AJ65BT-R2N
(a) Performance specifications comparisons

| Item |  |  | Specifications |  | Compatibility | Precautions for replacement |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  | AJ35PTF-R2 | AJ65BT-R2N |  |  |
| Interface specifications |  |  | RS-232C-compliant (25-pin) <br> $\times 1$ channel | RS-232C-compliant (9-pin) $\times 1$ channel | $\triangle$ | For differences in the RS-232C interface specifications, refer to 1). |
| Communication method |  |  | Full-duplex communication system (nonprocedural) | Full-duplex communication system (nonprocedural) | $\bigcirc$ |  |
| Synchronization method |  |  | Asynchronous method | Asynchronous method | $\bigcirc$ |  |
| Transmission speed |  |  | $300,600,1200,2400$, <br> 4800, 9600, 19200 bps | $\begin{gathered} 300,600,1200,2400, \\ 4800,9600,19200,38400,57600, \\ 115200 \text { bps }^{* 1} \end{gathered}$ | O |  |
| Data <br> type |  | bit | 1 | 1 | $\bigcirc$ |  |
|  |  | a bit | 7 or 8 | 7 or 8 | $\bigcirc$ |  |
|  |  | ty bit | 1 or 0 (none) | 1 or 0 (none) | $\bigcirc$ |  |
|  |  | bit | 1 or 2 | 1 or 2 | $\bigcirc$ |  |
| Error detection |  |  | Parity check (Odd or Even) | Parity check (Odd or Even) | $\bigcirc$ |  |
| Communication control |  |  | DTR/DSR (ER/DR) control | DTR/DSR (ER/DR) control | $\bigcirc$ |  |
|  |  |  | XON/XOFF (DC1/DC3) control | DC1/DC3 control | $\bigcirc$ |  |
| Transmission distance |  |  | 15m | Up to 15m | $\bigcirc$ |  |
| OS receive buffer |  |  | 2048 bytes | 5120 bytes | $\bigcirc$ |  |
| Generalpurpose I/O |  | Input | 12/24VDC (sink type) $\times 4$ points | 24VDC (sink type) $\times 2$ points |  | For differences in the generalpurpose I/O specifications, refer to 2) and 3). |
|  |  | Output | Transistor output (sink type) <br> 12/24VDC $\times 4$ points | Transistor output (sink type) <br> 12/24VDC $\times 2$ points | $\Delta$ |  |
| Number of occupied stations |  |  | 4 stations | 1 station | $\times$ | The number of occupied stations is different. |
| Power supply voltage |  |  | 15.6 to 31.2VDC | 24VDC | $\bigcirc$ |  |
| Current consumption |  |  | $130 \mathrm{~mA}(24 \mathrm{~V})$ | $110 \mathrm{~mA}(24 \mathrm{~V})$ | $\bigcirc$ |  |
| Weight |  |  | 0.71 kg | 0.40 kg | $\bigcirc$ |  |
| Max. size of send/ receive buffer |  |  | 1000 bytes each for send/receive (1000 bytes for total of send and receive) | (1536 words for total of send and receive) | $\bigcirc$ |  |
| External dimensions |  |  | $250(\mathrm{H}) \times 132(\mathrm{~W}) \times 41(\mathrm{D}) \mathrm{mm}$ | $80(\mathrm{H}) \times 170(\mathrm{~W}) \times 47(\mathrm{D}) \mathrm{mm}$ | $\times$ | The overall size differs. <br> Pay attention to the mounting dimensions. |

## 1) RS-232 interface specifications comparisons

The RS-232C cable must be changed as the RS-232C interface specifications are different between the AJ35PTF-R2 and AJ65BT-R2N.
[AJ35PTF-R2]

|  | Pin No. | Name | Signal code | Signal direction <br> AJ35PTF-R2 $\leftrightarrows$ External device |
| :---: | :---: | :---: | :---: | :---: |

| 6 | Data set ready | DR(DSR) | $\longleftrightarrow$ |
| 7 | Request to send | RS(RTS) | $\longleftrightarrow$ |
| 8 | Clear to send | CS(CTS) | $\longleftarrow$ |
| 9 | - | - | - |

## 8 <br> REPLACING THE COMMUNICATION MODULES

2) General-purpose input specifications comparisons
[AJ35PTF-R2]

[AJ65BT-R2N]

## 3) General-purpose output specifications comparisons

[AJ35PTF-R2]

## 8 <br> REPLACING THE COMMUNICATION MODULES

## [AJ65BT-R2N]

## (b) Functional comparisons

The following table shows serial communication module comparisons between MELSECNET/MINIS3 and CC-Link.

| Item | Functions |  | Compatibility | Precautions for replacement |
| :---: | :---: | :---: | :---: | :---: |
|  | AJ35PTF-R2 | AJ65BT-R2N |  |  |
| Barcode reading | Actually required data only can be read to the programmable controller CPU regardless of the data communication protocol of the compatible barcode reader. | None | $\times$ | Utilize nonprocedural communication. |
| ID card reading/ writing | Data can be read from and written to a programmable controller CPU by setting the MINI standard protocol for communication with the compatible ID card controller. | None | $\times$ | Utilize nonprocedural communication. |
| Nonprocedural communication | Nonprocedural communication with external devices is available. | Nonprocedural communication with external devices is available. There are two methods for nonprocedural communications: the automatic buffer memory update function and the RIWT (RISEND) and RIRD (RIRCV) instructions. | $\Delta$ | Create new programs as there is no compatibility in programs. |

(c) Switch comparisons

The switch settings on the serial communication module are not compatible as MELSECNET/MINIS3 and CC-Link are different networks.
For details, refer to the User's Manual for each module.
(d) Parameter comparisons

The parameter settings on the serial communication module are not compatible as MELSECNET/ MINI-S3 and CC-Link are different networks.
For details, refer to the User's Manual for each module.

## (e)Program Comparisons

The I/O signals and buffer memory on the serial communication module are not compatible as MELSECNET/MINI-S3 and CC-Link are different networks.
For details, refer to the User's Manual for each module.

## EXTERNAL DIMENSIONS

### 9.1 External Dimensions of MELSECNET/MINI-S3, A2C (I/O)

(1) AJ71PT32-S3, AJ71T32-S3

## (3) A2C I/O module

The following shows the external dimensions of the $\mathrm{AX} \square \mathrm{C}, \mathrm{AY} \square \mathrm{C}$, and $\mathrm{AX} \square \mathrm{Y} \square \mathrm{C}$.

(4) Remote terminal block I/O module, remote connector I/O module
(a) External dimensions of 26-point terminal block module type

(b) External dimensions of 34-point terminal block module type

Unit : mm (inch)
(c) External dimensions of AJ35TC1-32ם

(5) Stand-alone remote I/O module
(a) External dimensions of AJ35 $\square \mathrm{J}-8 \square$

(6) Compact type remote I/O module
(a) External dimensions of AJ35PTF-32, 28, 24■

The figure below shows the external dimensions of AJ35PTF-32口. The external dimensions of the AJ35PTF-28 $\square \square$ and AJ35PTF-24■ are the same.

Use M4 mounting screws with a length of $18(0.71)$ to $20(0.79)(m m(i n c h))$.

Unit : mm (inch)

## APPENDICES

## Appendix 1 Performance Specifications Comparison between MELSECNET/MINI-S3 I/O Module and Renewal Tool for A0J2

This section shows the performance specifications comparison between MELSECNET/MINI-S3 compact type remote I/O module and interface module of renewal tool for AOJ2 described in Section 1.2.

1) Specifications comparison between AJ35PTF-28DR and interface module (SC-AOJQIF28DR)

O: Compatible, $\triangle$ : Partially changed, $x$ : Incompatible

| Specifications |  | AJ35PTF-28DR input specifications | SC-A0JQIF28DR input specifications | Compatibility | Precautions for replacement |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Number of input points |  | 16 points | 16 points | $\bigcirc$ |  |
| Insulation method |  | Photocoupler | Photocoupler | $\bigcirc$ |  |
| Rated input voltage |  | 12VDC/24VDC | 12VDC/24VDC | $\bigcirc$ |  |
| Rated input current |  | Approx. 3mA/Approx. 7 mA | Approx. 3mA/Approx. 7 mA | $\bigcirc$ |  |
| Operating voltage range |  | 10.2 to 31.2 VDC (Ripple ratio within 5\%) | $\begin{gathered} 10.2 \text { to } 26.4 \mathrm{VDC} \\ \text { (Ripple ratio within } 5 \% \text { ) } \end{gathered}$ | $\Delta$ | The operating voltage range differs. |
| Maximum number of simultaneous input points |  | 100\% (16 points/common) simultaneously ON | 100\% (16 points/common) simultaneously ON | $\bigcirc$ |  |
| ON voltage/ON current |  | 9.5 VDC or more/2.6mA or more | 9.5 VDC or more/2.6mA or more | $\bigcirc$ |  |
| OFF voltage/OFF current |  | 6 VDC or less/1.0mA or less | 6 VDC or less/1.0mA or less | $\bigcirc$ |  |
| Input resistance |  | Approx. $3.4 \mathrm{k} \Omega$ | Approx. $3.3 \mathrm{k} \Omega$ | $\bigcirc$ | Input resistance is smaller. |
| Input form |  | Sink input (Input current flows off.) | Sink input (Input current flows off.) | $\bigcirc$ |  |
| Response time | $\mathrm{OFF} \rightarrow \mathrm{ON}$ | 10 ms or less (6ms TYP.) | 5 ms or less (1ms TYP.) | $\Delta$ | In combination with CC-Link input module: <br> 6.5 ms or less ( 2.5 ms TYP.) ${ }^{* 1}$ |
|  | $\mathrm{ON} \rightarrow \mathrm{OFF}$ | 10 ms or less ( $7.5 \mathrm{~ms} \mathrm{TYP)}$. | 5 ms or less (1ms TYP.) | $\Delta$ | In combination with CC-Link input module: <br> 6.5 ms or less ( 2.5 ms TYP.) $)^{* 1}$ |
| Common terminal arrangement |  | 16 points/common (Common terminal: TB17) | 16 points/common (Common terminal: TB17) | $\bigcirc$ |  |
| Operation indication |  | Available <br> (Turning ON the input turns LED ON) | None | $\Delta$ | Operation indication can be checked with CC-Link input module. |

O: Compatible, $\Delta$ : Partially changed, x : Incompatible

| Specifications |  | AJ35PTF-28DR output specifications | SC-A0JQIF28DR output specifications | Compatibility | Precautions for replacement |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Number of output points |  | 12 points | 12 points | O |  |
| Insulation method |  | Photocoupler | None | $\triangle$ | Photocoupler is provided on CCLink output module side. |
| Rated switching voltage/ current |  | 24VDC 2A (Resistance load)/point 240VAC 2A (COS $\phi=1$ )/point 5A/common | 24VDC 2A (Resistance load)/point 240VAC 2A (COS $\phi=1$ )/point 5A/common | $\bigcirc$ |  |
| Minimum switching load |  | $5 \mathrm{VDC} \mathrm{1mA}$ | $5 \mathrm{VDC} \mathrm{1mA}$ | $\bigcirc$ |  |

|  | Current | 150mA | 210 mA | $\Delta$ | If the voltage exceeds existing power capacity, add 24VDC power supply separately. |
| External connection method |  | 36-point terminal block connector <br> (M3 $\times 6$ screws) 2 pieces | 36-point terminal block connector (M3 $\times 6$ screws) 2 pieces | $\bigcirc$ |  |
| Applicable wire size |  | 0.75 to $2 \mathrm{~mm}^{2}$ (Applicable tightening torque $69 \mathrm{~N} \cdot \mathrm{~cm}$ ) | 0.75 to $2 \mathrm{~mm}^{2}$ (Applicable tightening torque $69 \mathrm{~N} . \mathrm{cm}$ ) | $\bigcirc$ |  |
| Applicable solderless terminal |  | R1.25-3, R2-3, <br> RAV1.25-3, RAV2-3 | ```1.25-3, 1.25-YS3A, 2-S3, 2-YS3A, V1.25-3, V1.25-YS3A, V2-S3, V2-YS3A``` | O |  |
| Number of occupied stations (number of occupied points) |  | 8 stations <br> (8 stations $\times 8$ points) | - | - | When using the AJ65SBTCF132D and AJ65SBTCF1-32T, the number of occupied stations is 2 stations (When using CC-Link, it is 1 station $\times 32$ points). |
| Weight |  | 1.20 kg | 0.66kg | $\Delta$ | Also consider the weight of fixed stand of programmable controller. ${ }^{*} 4$ |
| External dimensions |  | $250(\mathrm{H}) \times 190(\mathrm{~W}) \times 41(\mathrm{D}) \mathrm{mm}^{* 5}$ | $182(\mathrm{H}) \times 190(\mathrm{~W}) \times 41(\mathrm{D}) \mathrm{mm}^{*} 6$ | $\times$ | Check the dimensions since they depend on the installation type (building-up/horizontal/separate type). |

*1: Check that the specifications of leakage current of the used sensor and switches are equal to or less than the OFF current value.
If leakage current is equal to or more than the OFF current specifications, take measures against it with referring to "Input Module Troubleshooting" in the following handbook.
(Handbook for replacement)
Renewal tool for A0J2 series Transition from MELSEC-A0J2(H) series to renewal system using renewal tool (refer to Appendix 2.5.)
*2: A value when using the AJ65SBTCF1-32D.
*3: A value when using the AJ65SBTCF1-32T.
*4: The weight of fixed stand of programmable controller depends on replacement type of renewal tool for A0J2.
*5: External dimensions of the AJ35PTF-56AR does not include dimensions of the optical fiber cable connector.
*6: The external dimensions of the SC-A0JQIF56AR do not include those of its projection.

## WARRANTY

Please confirm the following product warranty details before using this product.

## 1. Gratis Warranty Term and Gratis Warranty Range

If any faults or defects (hereinafter "Failure") found to be the responsibility of Mitsubishi occurs during use of the product within the gratis warranty term, the product shall be repaired at no cost via the sales representative or Mitsubishi Service Company.
However, if repairs are required onsite at domestic or overseas location, expenses to send an engineer will be solely at the customer's discretion. Mitsubishi shall not be held responsible for any re-commissioning, maintenance, or testing on-site that involves replacement of the failed module.
[Gratis Warranty Term]
The gratis warranty term of the product shall be for one year after the date of purchase or delivery to a designated place.
Note that after manufacture and shipment from Mitsubishi, the maximum distribution period shall be six (6) months, and the longest gratis warranty term after manufacturing shall be eighteen (18) months. The gratis warranty term of repair parts shall not exceed the gratis warranty term before repairs.
[Gratis Warranty Range]
(1) The range shall be limited to normal use within the usage state, usage methods and usage environment, etc., which follow the conditions and precautions, etc., given in the instruction manual, user's manual and caution labels on the product.
(2) Even within the gratis warranty term, repairs shall be charged for in the following cases.

1. Failure occurring from inappropriate storage or handling, carelessness or negligence by the user. Failure caused by the user's hardware or software design.
2. Failure caused by unapproved modifications, etc., to the product by the user.
3. When the Mitsubishi product is assembled into a user's device, Failure that could have been avoided if functions or structures, judged as necessary in the legal safety measures the user's device is subject to or as necessary by industry standards, had been provided.
4. Failure that could have been avoided if consumable parts (battery, backlight, fuse, etc.) designated in the instruction manual had been correctly serviced or replaced.
5. Failure caused by external irresistible forces such as fires or abnormal voltages, and Failure caused by force majeure such as earthquakes, lightning, wind and water damage.
6. Failure caused by reasons unpredictable by scientific technology standards at time of shipment from Mitsubishi.
7. Any other failure found not to be the responsibility of Mitsubishi or that admitted not to be so by the user.

## 2. Onerous repair term after discontinuation of production

(1) Mitsubishi shall accept onerous product repairs for seven (7) years after production of the product is discontinued.
Discontinuation of production shall be notified with Mitsubishi Technical Bulletins, etc.
(2) Product supply (including repair parts) is not available after production is discontinued.

## 3. Overseas service

Overseas, repairs shall be accepted by Mitsubishi's local overseas FA Center. Note that the repair conditions at each FA Center may differ.
4. Exclusion of loss in opportunity and secondary loss from warranty liability

Regardless of the gratis warranty term, Mitsubishi shall not be liable for compensation of damages caused by any cause found not to be the responsibility of Mitsubishi, loss in opportunity, lost profits incurred to the user by Failures of Mitsubishi products, special damages and secondary damages whether foreseeable or not, compensation for accidents, and compensation for damages to products other than Mitsubishi products, replacement by the user, maintenance of on-site equipment, start-up test run and other tasks.

## 5. Changes in product specifications

The specifications given in the catalogs, manuals or technical documents are subject to change without prior notice.
