Changes for the Better

## Programmable Controller

# Transition from MELSECNET/MINI-S3, A2C (I/O) to CC-Link Handbook 

## MELSECNET/MINI-S3 A2C (I/O)

## - SAFETY PRECAUTIONS

(Read these precautions before using this product.)

Before using this product, please read this handbook and the relevant manuals carefully and pay full attention to safety to handle the product correctly.
The precautions given in this handbook are concerned with this product only. For the safety precautions of the programmable controller system, refer to the user's manual for the CPU module used.

In this handbook, the safety precautions are classified into two levels: " ! WARNING" and " $\uparrow$ CAUTION".

Under some circumstances, failure to observe the precautions given under " $\$$ CAUTION" may lead to serious consequences. Observe the precautions of both levels because they are important for personal and system safety.

Make sure that the end users read this handbook and then keep the manual in a safe place for future reference.

## OWhen replacing with the $Q$ series

## [Design Precautions]

#### Abstract

WARNING - For the operating status of each station after a communication failure in the data link, refer to the MELSEC-Q CC-Link System Master/Local Module User's Manual. Failure to do so may result in an accident due to an incorrect output or malfunction. - When connecting a peripheral with the CPU module or connecting an external device, such as a personal computer, with an intelligent function module to modify data of a running programmable controller, configure an interlock circuit in the program to ensure that the entire system will always operate safely. For other forms of control (such as program modification or operating status change) of a running programmable controller, read the relevant manuals carefully and ensure that the operation is safe before proceeding. Especially, when a remote programmable controller is controlled by an external device, immediate action cannot be taken if a problem occurs in the programmable controller due to a communication failure. To prevent this, configure an interlock circuit in the program, and determine corrective actions to be taken between the external device and CPU module in case of a communication failure. - Do not write any data to the "system area" of the buffer memory in the intelligent function module. Also, do not use any "use prohibited" signal as an output signal from the CPU module to the intelligent function module. Doing so may cause malfunction of the programmable controller system. - To set a refresh device in the network parameter, select the device Y for the remote output (RY) refresh device ("Remote Output (RY)"). If a device other than Y , such as M and L , is selected, the CPU module holds the device status even after its status is changed to STOP. For how to stop data link, refer to the MELSEC-Q CC-Link System Master/Local Module User's Manual. - If a CC-Link dedicated cable is disconnected, the network may be unstable, resulting in a communication failure of multiple stations. Configure an interlock circuit in the program to ensure that the entire system will always operate safely even if communications fail. Failure to do so may result in an accident due to an incorrect output or malfunction.

## [Design Precautions]

## $\triangle$ CAUTION

Do not install the control lines or communication cables together with the main circuit lines or power cables. Keep a distance of 100 mm or more between them. Failure to do so may result in malfunction due to noise.

## [Installation Precautions]

## 1 CAUTION

Use the programmable controller in an environment that meets the general specifications in the user's manual for the CPU module used. Failure to do so may result in electric shock, fire, malfunction, or damage to or deterioration of the product.

- To mount the module, while pressing the module mounting lever located in the lower part of the module, fully insert the module fixing projection(s) into the hole(s) in the base unit and press the module until it snaps into place. Incorrect mounting may cause malfunction, failure or drop of the module. When using the programmable controller in an environment of frequent vibrations, fix the module with a screw.
Tighten the screws within the specified torque range. Undertightening can cause drop of the screw, short circuit or malfunction. Overtightening can damage the screw and/or module, resulting in drop, short circuit, or malfunction. Shut off the external power supply (all phases) used in the system before mounting or removing the module. Failure to do so may result in damage to the product.
- Shut off the external power supply (all phases) used in the system before mounting or removing the module. Failure to do so may result in damage to the product.
- Do not directly touch any conductive parts and electronic components of the module. Doing so can cause malfunction or failure of the module.

## \ WARNING

Shut off the external power supply (all phases) used in the system before installation and wiring. Failure to do so may result in electric shock or damage to the product.

- After wiring, attach the included terminal cover to the module before turning it on for operation. Failure to do so may result in electric shock.

## [Wiring Precautions]

## $\triangle$ CAUTION

Use applicable solderless terminals and tighten them within the specified torque range. If any spade solderless terminal is used, it may be disconnected when the terminal screw comes loose, resulting in failure.

- Tighten the terminal screws within the specified torque range. Undertightening can cause short circuit, fire, or malfunction. Overtightening can damage the screw and/or module, resulting in drop, short circuit, or malfunction.
- Do not install the control lines or communication cables together with the main circuit lines or power cables. Failure to do so may result in malfunction due to noise.
- Prevent foreign matter such as dust or wire chips from entering the module. Such foreign matter can cause a fire, failure, or malfunction.
- A protective film is attached to the top of the module to prevent foreign matter, such as wire chips, from entering the module during wiring. Do not remove the film during wiring. Remove it for heat dissipation before system operation.
- Use CC-Link dedicated cables for a CC-Link system. If not, the performance of the CC-Link system is not guaranteed. For the maximum station-to-station distance and the overall cable distance, follow the specifications in Section 2.2 and the MELSEC-Q CC-Link System Master/Local Module User's Manual. If not, normal data transmission is not guaranteed.
- Place the cables in a duct or clamp them. If not, dangling cable may swing or inadvertently be pulled, resulting in damage to the module or cables or malfunction due to poor contact.
- When disconnecting the cable from the module, do not pull the cable by the cable part. For the cable with connector, hold the connector part of the cable. For the cable connected to the terminal block, loosen the terminal screw. Pulling the cable connected to the module may result in malfunction or damage to the module or cable.

## [Startup and Maintenance Precautions]

## WARNING

Do not touch any terminal while power is on. Doing so will cause electric shock or malfunction.

- Shut off the external power supply (all phases) used in the system before cleaning the module or retightening the terminal screws or module fixing screws. Failure to do so may result in electric shock or cause the module to fail or malfunction. Undertightening can cause drop of the screw, short circuit or malfunction. Overtightening can damage the screw and/or module, resulting in drop, short circuit, or malfunction.

## [Startup and Maintenance Precautions]

## CAUTION

Do not disassemble or modify the modules. Doing so may cause failure, malfunction, injury, or a fire.

- Shut off the external power supply (all phases) used in the system before mounting or removing the module. Failure to do so may cause the module to fail or malfunction.
- After the first use of the product, do not mount/remove the module to/from the base unit, and the terminal block to/from the module more than 50 times (IEC 61131-2 compliant) respectively. Exceeding the limit of 50 times may cause malfunction.
- Before handling the module, touch a grounded metal object to discharge the static electricity from the human body. Failure to do so may cause the module to fail or malfunction.

## [Disposal Precautions]

| When disposing of this product, treat it as industrial waste. |
| :--- | :--- |

## OWhen replacing with the $L$ series

[Design Precautions]

## [Design Precautions]

## $\triangle$ CAUTION

Do not install the control lines or communication cables together with the main circuit lines or power cables.
Keep a distance of 100 mm or more between them.
Failure to do so may result in malfunction due to noise.

## [Installation Precautions]

## WARNING

Shut off the external power supply (all phases) used in the system before mounting or removing a module.
Failure to do so may result in electric shock or cause the module to fail or malfunction.

## [Installation Precautions]

## CAUTION

Use the programmable controller in an environment that meets the general specifications in the Safety Guidelines provided with the CPU module or head module.
Failure to do so may result in electric shock, fire, malfunction, or damage to or deterioration of the product.

- To interconnect modules, engage the respective connectors and securely lock the module joint levers until they click.
Incorrect interconnection may cause malfunction, failure, or drop of the module.
- Do not directly touch any conductive parts and electronic components of the module. Doing so can cause malfunction or failure of the module.

## [Wiring Precautions]

#### Abstract

WARNING Shut off the external power supply (all phases) used in the system before wiring. Failure to do so may result in electric shock or cause the module to fail or malfunction. - After installation and wiring, attach the included terminal cover to the module before turning it on for operation. Failure to do so may result in electric shock.

## . CAUTION

- Use applicable solderless terminals and tighten them within the specified torque range.

If any spade solderless terminal is used, it may be disconnected when a terminal block screw comes loose, resulting in failure.

- Do not install the control lines or communication cables together with the main circuit lines or power cables.
Failure to do so may result in malfunction due to noise.
- Place the cables in a duct or clamp them.

If not, dangling cable may swing or inadvertently be pulled, resulting in damage to the module or cables or malfunction due to poor contact.

- Tighten the terminal block screws within the specified torque range.

Undertightening can cause short circuit or malfunction.
Overtightening can damage the screw and/or module, resulting in drop, short circuit, fire, or malfunction.

- When disconnecting the cable from the module, do not pull the cable by the cable part.

For the cable with connector, hold the connector part of the cable.
For the cable connected to the terminal block, loosen the terminal screw.
Pulling the cable connected to the module may result in malfunction or damage to the module or cable.

- Prevent foreign matter such as dust or wire chips from entering the module.

Such foreign matter can cause a fire, failure, or malfunction.

- A protective film is attached to the top of the module to prevent foreign matter, such as wire chips, from entering the module during wiring.
Do not remove the film during wiring.
Remove it for heat dissipation before system operation.
- For the CC-Link system, use dedicated cables that are specified by the manufacturer.

If not, the performance of the CC-Link system is not guaranteed.
Also, the maximum overall cable length and the station-to-station cable length must meet those specified in Section 2.2 and the MELSEC-L CC-Link System Master/Local Module User's Manual. If not, normal data transmission is not guaranteed.

## [Startup and Maintenance Precautions]

## WARNING

Do not touch any terminal while power is on.
Doing so will cause electric shock or malfunction.

- Shut off the external power supply (all phases) used in the system before cleaning the module or retightening the terminal block screws.
Failure to do so may result in electric shock.

## [Startup and Maintenance Precautions]

## $\triangle$ CAUTION

Do not disassemble or modify the modules.
Doing so may cause failure, malfunction, injury, or a fire.

- Shut off the external power supply (all phases) used in the system before mounting or removing a module.
Failure to do so may cause the module to fail or malfunction.
- Tighten the terminal block screws within the specified torque range.

Undertightening can cause drop of the component or wire, short circuit, or malfunction.
Overtightening can damage the screw and/or module, resulting in drop, short circuit, or malfunction.

- After the first use of the product (module and terminal block), do not connect/disconnect the product more than 50 times (in accordance with IEC 61131-2).
Exceeding the limit may cause malfunction.
- Before handling the module, touch a conducting object such as a grounded metal to discharge the static electricity from the human body.
Failure to do so may cause the module to fail or malfunction.

## [Disposal Precautions]

## $\triangle$ CAUTION

When disposing of this product, treat it as industrial waste.

## CONDITIONS OF USE FOR THE PRODUCT

(1) Mitsubishi programmable controller ("the PRODUCT") shall be used in conditions;
i) where any problem, fault or failure occurring in the PRODUCT, if any, shall not lead to any major or serious accident; and
ii) where the backup and fail-safe function are systematically or automatically provided outside of the PRODUCT for the case of any problem, fault or failure occurring in the PRODUCT.
(2) The PRODUCT has been designed and manufactured for the purpose of being used in general industries.

MITSUBISHI SHALL HAVE NO RESPONSIBILITY OR LIABILITY (INCLUDING, BUT NOT LIMITED TO ANY AND ALL RESPONSIBILITY OR LIABILITY BASED ON CONTRACT, WARRANTY, TORT, PRODUCT LIABILITY) FOR ANY INJURY OR DEATH TO PERSONS OR LOSS OR DAMAGE TO PROPERTY CAUSED BY the PRODUCT THAT ARE OPERATED OR USED IN APPLICATION NOT INTENDED OR EXCLUDED BY INSTRUCTIONS, PRECAUTIONS, OR WARNING CONTAINED IN MITSUBISHI'S USER, INSTRUCTION AND/OR SAFETY MANUALS, TECHNICAL BULLETINS AND GUIDELINES FOR the PRODUCT.
("Prohibited Application")
Prohibited Applications include, but not limited to, the use of the PRODUCT in;

- Nuclear Power Plants and any other power plants operated by Power companies, and/or any other cases in which the public could be affected if any problem or fault occurs in the PRODUCT.
- Railway companies or Public service purposes, and/or any other cases in which establishment of a special quality assurance system is required by the Purchaser or End User.
- Aircraft or Aerospace, Medical applications, Train equipment, transport equipment such as Elevator and Escalator, Incineration and Fuel devices, Vehicles, Manned transportation, Equipment for Recreation and Amusement, and Safety devices, handling of Nuclear or Hazardous Materials or Chemicals, Mining and Drilling, and/or other applications where there is a significant risk of injury to the public or property.
Notwithstanding the above restrictions, Mitsubishi may in its sole discretion, authorize use of the PRODUCT in one or more of the Prohibited Applications, provided that the usage of the PRODUCT is limited only for the specific applications agreed to by Mitsubishi and provided further that no special quality assurance or fail-safe, redundant or other safety features which exceed the general specifications of the PRODUCTs are required. For details, please contact the Mitsubishi representative in your region.

- For the products shown in handbooks for transition, catalogues, and transition examples, refer to the manuals for the relevant products and check the detailed specifications, precautions for use, and restrictions before replacement.
For the products manufactured by Mitsubishi Electric Engineering Co., Ltd., Mitsubishi Electric System \& Service Co., Ltd., and other companies, refer to the catalogue for each product and check the detailed specifications, precautions for use, and restrictions before use.
The manuals and catalogues for our products, products manufactured by Mitsubishi Electric Engineering Co., Ltd., and Mitsubishi Electric System \& Service Co., Ltd. are shown in Appendix of each handbook for transition.
- Products shown in this handbook are subject to change without notice.

## GENERIC TERMS AND ABBREVIATIONS

Unless otherwise specified, this handbook uses the following generic terms and abbreviations.

| Generic term/abbreviation | Description |
| :---: | :---: |
| -Series |  |
| A series | An abbreviation for large types of Mitsubishi Electric MELSEC-A series programmable controllers |
| AnS series | An abbreviation for compact types of Mitsubishi Electric MELSEC-A series programmable controllers |
| A/AnS series | A generic term for A series and AnS series |
| QnA series | An abbreviation for large types of Mitsubishi Electric MELSEC-QnA series programmable controllers |
| QnAS series | An abbreviation for compact types of Mitsubishi Electric MELSEC-QnA series programmable controllers |
| QnA/QnAS series | A generic term for QnA series and QnAS series |
| A/AnS/QnA/QnAS series | A generic term for A series, AnS series, QnA series, and QnAS series |
| Q series | An abbreviation for Mitsubishi Electric MELSEC-Q series programmable controllers |
| L series | An abbreviation for Mitsubishi Electric MELSEC-L series programmable controllers |
| ■CPU module type |  |
| CPU module | A generic term for A series, AnS series, QnA series, QnAS series, Q series, and L series CPU modules |
| Process CPU | A generic term for the Q02PHCPU, Q06PHCPU, Q12PHCPU, and Q25PHCPU |
| Redundant CPU | A generic term for the Q12PRHCPU and Q25PRHCPU |
| Universal model QCPU | A generic term for the Q00UJCPU, Q00UCPU, Q01UCPU, Q02UCPU, Q03UDCPU, Q03UDVCPU, Q03UDECPU, Q04UDHCPU, Q04UDVCPU, Q04UDEHCPU, Q06UDHCPU, Q06UDVCPU, Q06UDEHCPU, Q10UDHCPU, Q10UDEHCPU, Q13UDHCPU, Q13UDVCPU, Q13UDEHCPU, Q20UDHCPU, Q20UDEHCPU, Q26UDHCPU, Q26UDVCPU, and Q26UDEHCPU |
| LCPU | A generic term for the L02SCPU, L02SCPU-P, L02CPU, L02CPU-P, L06CPU, L06CPU-P, L26CPU, L26CPU-P, L26CPU-BT, and L26CPU-PBT |
| Built-in CC-Link function | The abbreviation for the L26CPU-BT/L26CPU-PBT built-in CC-Link system master/local function |
| ■CPU module model |  |
| ACPU | A generic term for MELSEC-A series CPU modules |
| AnSCPU | A generic term for MELSEC-AnS series CPU modules |
| AnNCPU | A generic term for the A1NCPU, A1NCPUP21/R21, A1NCPUP21-S3, A2NCPU, A2NCPU-S1, A2NCPUP21/R21, A2NCPUP21/R21-S1, A2NCPUP21-S3(S4), A3NCPU, A3NCPUP21/R21, and A3NCPUP21-S3 |
| AnACPU | A generic term for the A2ACPU, A2ACPU-S1, A3ACPU, A2ACPUP21/R21, A2ACPUP21/R21-S1, and A3ACPUP21/R21 |
| AnUCPU | A generic term for the A2UCPU, A2UCPU-S1, A3UCPU, and A4UCPU |
| AnUS(H)CPU | A generic term for the A2USCPU, A2USCPU-S1, A2USHCPU-S1 |
| A/AnSCPU | A generic term for MELSEC-A series and -AnS series CPU modules |
| AnN/AnACPU | A generic term for the AnNCPU and AnACPU |
| AnN/AnA/AnSCPU | A generic term for the AnNCPU, AnACPU, and AnSCPU |
| A2CCPU | A generic term for the A2CCPU, A2CCPU-DC24V, A2CCPUP21/R21, A2CCPUC24(PRF), and A2CJCPU |
| QnACPU | A generic term for MELSEC-QnA series CPU modules |
| QnASCPU | A generic term for MELSEC-QnAS series CPU modules |
| QnA/QnASCPU | A generic term for MELSEC-QnA series and -QnAS series CPU modules |
| A/AnS/QnA/QnASCPU | A generic term for MELSEC-A series, -AnS series, -QnA series, and -QnAS series CPU modules |
| QCPU | A generic term for MELSEC-Q series CPU modules |
| LCPU | A generic term for MELSEC-L series CPU modules |

A. 16

## INTRODUCTION

### 1.1 Replacing with MELSEC-Q/L series

The MELSEC-Q/L series does not have a MELSECNET/MINI-S3 master module. For this reason, it is recommended to use the CC-Link system when replacing the MELSECNET/MINI-S3 system using the MELSEC-Q/L series.
(Before replacement)

- Configuration example of MELSECNET/MINI

- Configuration example of A2CCPU

(After replacement)
- Configuration example of when the CPU module is replaced with the QCPU
- Configuration example of when the CPU module is replaced with the LCPU

# 1.2 Suggestions for Replacement with the Remote I/O Module of CCLink System 

| Module before replacement (current status) | Module after replacement |  | Corresponding module (before replacement $\rightarrow$ after replacement) |
| :---: | :---: | :---: | :---: |
|  | Type | Outline |  |
| MELSECNET/MINI-S3compatible module (AJ35 $\square$ - $\square$ ) A2C (I/O) module (A $\square \mathrm{C})$ | CC-Link system compact type remote I/O module | - Reconfiguration of the system is easy. Selecting the best match model from the wide selection of modules for a module before replacement is possible. | (All models) |
|  | CC-Link system remote I/O module (A2C shape) | - Module mounting size is the same. <br> This A2C shape CC-Link I/O module has the same shape (same mounting dimensions) with A2C (I/O) module. No processing for mounting holes is required when replacing the module. <br> - I/O signal wiring is the same. Since the terminal block of the same shape is used, I/O signal wiring is the same. ${ }^{* 1}$ <br> - Optional products are available. The A6DIN1C and A2CCOM-TB (sold separately) are available. If the A2C (I/O) is used before replacement, it can be utilized. | AX41C/AX81C <br> $\rightarrow$ AJ65DBTB1-32D <br> AY51C <br> $\rightarrow$ AJ65DBTB1-32T1 <br> AX40Y50C <br> $\rightarrow$ AJ65DBTB1-32DT1 <br> AY13C <br> $\rightarrow$ AJ65DBTB1-32R <br> AX40Y10C/AX80Y10C <br> $\rightarrow$ AJ65DBTB1-32DR |
|  | CC-Link system remote I/O module | - Change in wiring is unnecessary. <br> By using a wiring conversion adapter, terminal block of the module before replacement can be utilized to the module after replacement ${ }^{* 2}$ (regarding communication cable and power cable, wiring change is required). | AJ35TB1-16D <br> $\rightarrow$ AJ65BTB1-16D <br> AJ35TB2-16D <br> $\rightarrow$ AJ65BTB2-16D <br> AJ35TB1-16T <br> $\rightarrow$ AJ65BTB1-16T |

*1 Man-hour taken for wiring change can be reduced since wiring to the external device can also be used by partially changing the wiring of power cable and communication cable.

After replacing the module,

## Remove the wiring

 terminal block from existing I/O module.

INTRODUCTION

### 1.3 Suggestions for Replacement with Renewal tool for A0J2

### 1.3.1 Advantages of using renewal tool for A0J2 (manufactured by Mitsubishi Electric System \& Service Co., Ltd.)

## (1) Renewal tool for A0J2

This tool is for replacing the existing MELSECNET/MINI-S3 compact type I/O module with a CC-Link module. It is composed of the interface module to which wiring terminal block of existing I/O module can be attached, components for a programmable controller, and connection cable.
Also, the interface module has the conversion function that converts AC input into DC input and DC output into relay output and triac output. The interface module can be replaced with the 40-pin connector type DC I/O module.
(a) Configuration example of Renewal tool for A0J2

For details on the renewal tool for A0J2, interface modules, and mounting dimensions, refer to the following.

- Renewal tool for A0J2 series Transition from MELSEC-A0J2(H) series to renewal system using renewal tool
(Issued by Mitsubishi Electric System \& Service Co., Ltd.)

## (2) Using existing cables

Although the $A / Q n A$ series CPU module is replaced with the Q series CPU module, the external wiring terminal block attached to the existing MELSECNET/MINI-S3 compact type remote I/O module can be utilized to the interface module. It allows to replace the modules without external wiring change. (The module is replaced with 40-pin connector type DC I/O module of CC-Link.)
Also, new wiring is unnecessary since the CC-Link I/O module is connected to the interface module with dedicated cable.
(Before replacement)

(After replacement)

## XPOINT

For specifications comparison and functional comparison between the existing MELSECNET/MINI-S3 compact type remote I/O module and the renewal tool for A0J2 after replacement, refer to APPENDICES.
(3) Processing the mounting holes is unnecessary.

Mounting dimensions of the base adapter included with renewal tool for AOJ2 is the same with dimensions of existing AOJ2 I/O module. Replacement without processing the mounting holes is possible.
(4) I/O address change is unnecessary.

By replacing the MELSECNET/MINI-S3 compact type remote I/O module with 40-pin connector type DC input/output module of CC-Link, the I/O address assignment of the MELSECNET/MINI-S3 compact type remote I/O module can be utilized.
It eliminates I/O address change and allows substantial reduction of program correction.
(5) List of alternative models

| Model to be discontinued (MELSECNET/ MINI-S3) |  | Alternative model (CC-Link/renewal tool for A0J2) |  |  |
| :---: | :---: | :---: | :---: | :---: |
| Product | Model | CC-Link | Renewal tool for A0J2* |  |
|  |  |  | Interface module | Fixed stand kit of programmable controller ${ }^{\text {2 }}$ /3 |
| Input module | AJ35PTF-32A | AJ65SBTCF1-32D | SC-A0JQIF32A | SC-A0JQSES-U1 (Building-up type, single) SC-AOJQSES-F (Horizontal type, single) SC-AOJQBSS (Separate type, single) |
|  | AJ35PTF-32D |  | SC-A0JQIF32D |  |
| Output module | AJ35PTF-24R | AJ65SBTCF1-32T | SC-A0JQIF24R |  |
|  | AJ35PTF-24S |  | SC-A0JQIF24S |  |
|  | AJ35PTF-24T |  | SC-A0JQIF24T |  |
| I/O module | AJ35PTF-28AR | AJ65SBTCF1-32D+ <br> AJ65SBTCF1-32T | SC-A0JQIF28AR |  |
|  | AJ35PTF-28AS |  | SC-A0JQIF28AS |  |
|  | AJ35PTF-28DR |  | SC-A0JQIF28DR |  |
|  | AJ35PTF-28DS |  | SC-A0JQIF28DS |  |
|  | AJ35PTF-28DT |  | SC-A0JQIF28DT |  |
|  | AJ35PTF-56AR |  | SC-A0JQIF56AR | SC-A0JQSEL-U1 (Building-up type, single) SC-A0JQSEL-U2 (Building-up type, double) SC-AOJQSEL-F (Horizontal type, single/double) SC-AOJQBSL (Separate type, single/double) |
|  | AJ35PTF-56AS |  | SC-A0JQIF56AS |  |
|  | AJ35PTF-56DR |  | SC-A0JQIF56DR |  |
|  | AJ35PTF-56DS |  | SC-A0JQIF56DS |  |
|  | AJ35PTF-56DT |  | SC-A0JQIF56DT |  |
| *1 | The renewal tool for A0J2 series Interface module and the cable for connecting the CC-Link I/O module (SC-A0JQCDDM) are also required. |  |  |  |
| *2 | The fixed stand of programmable controller is equipped with a Q33B mounting plate as standard equipment. A separatelysold mounting plate (SC-A0JQPT2) is required to use CC-Link modules. |  |  |  |
| *3 | To use fixed stands of programmable controller for double stack, arrange the CC-Link module for the second stand on a location different from the installation surface of the existing panel. (Up to two CC-Link modules can be mounted on the existing space.) |  |  |  |
|  | For details, refer to the related catalogs and manuals issued by Mitsubishi Electric System \& Service Co., Ltd. |  |  |  |

### 1.3.2 Proposal of replacement with renewal tool for A0J2

## (1) Building-up type

The CC-Link I/O module can be built up to the existing panel if there is room for depth in front of existing module, and can be installed on the installation surface of the existing panel.
(Before replacement)

(After replacement) ${ }^{* 1}$

*1: Up to two CC-Link I/O modules can be used for a renewal tool for AOJ2. Install the third CC-Link I/O module or later separately.

## (2) Horizontal type

The CC-Link I/O module can be installed horizontally, if there is room above the existing module.

*1: Up to two CC-Link I/O modules can be used for a renewal tool for AOJ2. Install the third CC-Link I/O module or later separately.

## (3) Separate type

When CC-Link I/O modules cannot be stacked or installed horizontally, install them separately.

## Remark

Other than CC-Link, replacement to the QCPU or AnSCPU is possible.
For details, contact your local Mitsubishi sales representative. (refer to Section 1.5).

### 1.4 Precautions for Replacement

(a) Before replacing MELSECNET/MINI-S3 with CC-Link, be sure to refer to the manuals for each of the CC-Link modules, and confirm the functions, specifications, grounding method and methods of use of the modules.
(b) For replacement using renewal tool for A0J2, always refer to the following manual. Select correct products after checking the functions, specifications, and usage. (Reference manual)

- Renewal tool for A0J2 series transition from MELSEC-A0J2(H) series to renewal system using renewal tool (Refer to Appendix 2.5.)
(c) When stations installing a MELSECNET/MINI-S3-CC-Link module wiring conversion adapter to the CC-Link remote I/O module (AJ65BTB1-16D, AJ65BTB2-16D or AJ65BTB1$16 T$ ) is mixed, the maximum number of connected modules is 32 with the use of a version 1.10 compatible CC-Link dedicated cable.
(No restrictions when using cables other than a version 1.10 compatible CC-Link dedicated cable.)
(d) After replacing MELSECNET/MINI-S3 with CC-Link, be sure to check operation of the entire system before starting actual operation.

## XPOINT

Before replacement, make sure again that the frame ground of the programmable controller system is securely grounded.
The noise tolerance of programmable controllers is secured by diverting noise to ground via the frame ground as an EMC measure.
For this reason, the system might be affected by noise according to reconfiguring the system if grounding is insufficient.
Also, consider the following as a provisional measure when checking grounding status is difficult.
(1) Change the ground of the system into an exclusive ground.
(2) Add on a ferrite core between the ground wire and the module FG terminal.

### 1.5 Contact of the Relevant Products

Renewal tool manufactured by Mitsubishi Electric Engineering Co., Ltd.
For products manufactured by Mitsubishi Electric Engineering Co., Ltd., contact your local sales representative.

Introduction of "replacement of MELSEC-A series, system renewal service, and renewal tool for A0J2"
For replacement of MELSEC-A series and system renewal service, contact your local sales representative.

## PERFORMANCE SPECIFICATIONS COMPARISONS

### 2.1 Performance Specifications Comparisons between MELSECNET/MINI-S3 and CC-Link

O: Compatible, $\Delta$ : Partial change required, $\times$ : Not compatible

| Item |  | Specifications |  |  | Compatibility | Precautions for replacement |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | MELSECNET/MINI-S3 | A2CCPU | CC-Link |  |  |
|  | Max. <br> number of link stations | 64 stations (8 points/station) |  | 64 stations (32 points/ station) | O |  |
|  | Maximum control I/O points | 1024 points *1 | 512 points | 4096 points + 512 words | $\bigcirc$ |  |
| Number of master modules mounted |  | Max. 64 modules (according to the specifications for the CPU module used.) | The CPU has specifications equivalent to those of a master module. | When setting parameters with GX Works2/GX <br> Developer: Max. 8 modules ${ }^{*}{ }^{2} 3$ <br> When setting parameters with dedicated instructions: Max. 64 modules ${ }^{* 3}$ (according to the specifications for the CPU module used.) | O |  |
| Commun | ation speed | 1.5 Mbps |  | $\begin{gathered} 156 \mathrm{k} / 625 \mathrm{k} / 2.5 \mathrm{M} / 5 \mathrm{M} / \\ 10 \mathrm{Mbps} \\ \hline \end{gathered}$ | $\bigcirc$ |  |
| Transmi | on method | Ring |  | Bus | $\times$ | New cable must be laid. |
| Overall | le distance | No restriction |  | 1200 m (at 156kbps) | $\times$ | When the transmission distance exceeds 1200m, use a CCLink repeater module. |
| Max. tra distance stations | mission <br> tween | Optical data link: 50 m $(35 m)^{* 4}$ <br> Twisted pair data link: 100 m $(50 \mathrm{~m})^{*}{ }^{*}$ | Twisted pair data link: 100 m $(50 \mathrm{~m})^{* 5}$ | 1200 m (at 156kbps) | $\bigcirc$ |  |
| Number <br> O points | occupied I/ <br> er stations | In I/O dedicated mode: 32 points In extended mode: 48 points | --- | 32 points | $\triangle$ | For the extended mode, the number of occupied points changes. |

*1: When 16 separate refresh type remote I/O modules AJ35PTF-128DT (number of occupied stations: 4) are connected, 1024 I/O points each can be controlled.
*2: The following CPU modules have the restriction of the number of modules mounted.

- Q00UJ/Q00U/Q01UCPU: 2
- Q02UCPU: 4
- L02S/L02CPU(-P): 2
- L06/L26CPU(-P): 4
- L26CPU-(P)BT: Built-in CC-Link function + 3
*3: Total number of CC-Link master stations and local stations.
*4: When a 2VTPE-1 optical combined vinyl-insulated sheath cable (manufactured by Mitsubishi Cable Industries, Ltd.) is used, the max. transmission distance between stations is 35 m .
*5: The max. transmission distance between stations varies according to the size of the twisted pair cable.
$0.2 \mathrm{~mm}^{2}$ or more to less than $0.5 \mathrm{~mm}^{2} \ldots 50 \mathrm{~m}$,
$0.5 \mathrm{~mm}^{2}$ or more ... 100 m

## 2 <br> PERFORMANCE SPECIFICATIONS COMPARISONS

### 2.2 Wiring in CC-Link

New cables must be laid when replacing MELSECNET/MINI-S3 with CC-Link as the two systems differ in the applicable cable types.

### 2.2.1 CC-Link Ver. 1.00 cable specifications

(1) Connection method

In the CC-Link system, the terminal resistor to be connected varies according to the cable to be used.

| Cable type | Terminal resistor |
| :--- | :---: |
| CC-Link dedicated cable | $110 \Omega 1 / 2 \mathrm{~W}$ (brown/brown/brown) |
| CC-Link dedicated high-performance cable | $130 \Omega 1 / 2 \mathrm{~W}$ (brown/orange/brown) |

(2) Cable length between stations, max. overall cable length

1) When the system is composed of only remote $I / O$ stations and remote device stations

*1: Cable length between remote I/O stations or remote device stations
*2: Cable length between master station and next stations

CC-Link dedicated cable ( $110 \Omega$ used as terminal resistor)

| Transmission speed | Cable length between stations |  | Max. overall cable length |
| :---: | :---: | :---: | :---: |
|  | *1 | *2 |  |
| 156kbps | 30 cm or more | 1 m or more | 1200m |
| 625kbps |  |  | 600m |
| 2.5 Mbps |  |  | 200m |
| 5Mbps | 30 cm to $59 \mathrm{~cm}{ }^{*}$ |  | 110m |
|  | 60 cm or more |  | 150m |
| 10Mbps | 30 cm to 59 cm * |  | 50 m |
|  | 60 cm to $99 \mathrm{~cm} *$ |  | 80m |
|  | 1 m or more |  | 100m |

CC-Link dedicated high-performance cable (130 $\Omega$ used as terminal resistor)

| Transmission speed |  | Cable length between stations |  | Max. overall cable length |
| :---: | :---: | :---: | :---: | :---: |
|  |  | *1 | *2 |  |
|  |  | 30 cm or more | 1 m or more | 1200m |
|  |  |  |  | 900m |
|  |  |  |  | 400m |
|  |  |  |  | 150m |
| 10Mbps | Number of connected modules :1 to 32 |  |  | 100m |
|  | Number of | 30 cm to $39 \mathrm{~cm}{ }^{*}$ |  | 80m |
|  | connected modules : 33 to 48 | 40 cm or more |  | 100m |
|  | Number of | 30 cm to $39 \mathrm{~cm}{ }^{*}$ |  | 20m |
|  | connected | 40 cm to $69 \mathrm{~cm}{ }^{*}$ |  | 30m |
|  | modules :49 to 64 | 70 cm or more |  | 100m |

* When an actual cable length between remote I/O stations or remote device stations is in this range at even one location, the above max. overall cable length applies.

2) When the system is composed of remote $I / O$ stations, remote device stations, local stations, and intelligent device stations

*1: Cable length between remote I/O stations or remote device stations
*2: Cable length between master/local stations or intelligent device stations and next stations

CC-Link dedicated cable ( $110 \Omega$ used as terminal resistor)

| Transmission speed | Cable length between stations |  | Max. overall cable length |
| :---: | :---: | :---: | :---: |
|  | *1 | *2 |  |
| 156kbps | 30 cm or more | 2 m or more | 1200m |

| 10 Mbps |  |  |

## FUNCTIONAL COMPARISONS

### 3.1 Functional Comparisons between MELSECNET/MINI-S3 and CC-Link

| Item |  | Specifications |  | Compati <br> bility | Precautions for replacement |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | MELSECNET/MINI-S3 | CC-Link |  |  |
| Communication with remote station |  | Communication with batch refresh type remote I/O modules, separate refresh type remote I/O modules and remote terminal modules is possible. | Communication with remote I/O stations, remote device stations, local stations, and intelligent device stations is possible. | $\times$ | Create new programs as the two systems are not compatible in the program. |
|  |  | Communications with all stations sometimes is discontinued when an error occurs on even one station. <br> The faulty station is detected on the master station and is stored to buffer memory. | Only the faulty station is disconnected, and communication with other stations is continued normally. <br> The faulty station is detected on the master station and is stored to buffer memory. | $\triangle$ | The method of confirmation is different. Review the program. |
|  |  | Breakage of the optical cables and twisted pair cables can be checked by changing the operation mode of the master station. | Breakage of twisted pair cables can be checked by changing the operation mode of the master station. | $\triangle$ |  |
| Others | Monitor station function | The I/O status of the remote I/O module can be monitored by the LEDs on the master station. | None | $\times$ | Connect the programming tool and check by the device monitor. |

## 4 <br> REPLACING MASTER MODULE/REMOTE MODULE

### 4.1 Replacing Master Module

### 4.1.1 List of alternative master module models

| MELSECNET/MINI-S3 models to be discontinued |  | Alternative model for CC-Link |  |
| :---: | :---: | :---: | :---: |
| Product name | Model name | Model name | Remarks (restrictions) |
| Master module | AJ71PT32-S3 | QJ61BT11N/LJ61BT11/ <br> L26CPU-(P)BT <br> (Built-in CC-Link function) | Examine replacement with CC-Link. <br> For details, refer to the User's Manual for the respective module. |
|  | AJ71T32-S3 |  |  |
|  | A1SJ71PT32-S3 |  |  |
|  | A1SJ71T32-S3 |  |  |

### 4.1.2 List of alternative models for the A2CCPU

### 4.2 Replacing Remote Module

CC-Link does not have a remote module that uses a building block type I/O module. When replacing a remote module, consider replacing it with each CC-Link remote module or a local station.

### 4.2.1 List of alternative remote module models

| MELSECNET/MINI-S3 models to be <br> discontinued |  | Alternative models for CC-Link |  |
| :--- | :--- | :--- | :--- |
| Product name | Model name | Model name | Remarks (restrictions) |
| Remote module | AJ72PT35 | None | Consider replacing it with each CC-Link remote module <br> or a local station |
|  | AJ72T35 | None |  |

*1: A program is required for a CC-Link local station as it cannot directly control I/O modules.
For this reason, the following system changes are required.

MELSECNET/MINI-S3 remote station

- When the local station is configured with the QCPU + QJ61BT11N

CC-Link local station

- When the local station is configured with the LCPU + LJ61BT11 or L26CPU-(P)BT with built-in CC-Link function

CC-Link local station

## REPLACING I/O MODULE

### 5.1 List of Alternative I/O Module Models

### 5.2 I/O Module Specifications Comparison

### 5.2.1 Input module specifications comparison

(1) Specifications comparison between AX11C and AJ65SBTB2N-16A

| Specifications |  | AX11C | AJ65SBTB2N-16A | Compatibility | Precautions for replacement |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Number of input points |  | 32 points | 16 points | $\times$ | When seventeen or more points are used, use two AJ65SBTB2N-16A modules |
| Insulation method |  | Photocoupler | Photocoupler | $\bigcirc$ |  |
| Rated input voltage |  | 100-120VAC, $50 / 60 \mathrm{~Hz}$ | 100-120VAC, $50 / 60 \mathrm{~Hz}$ | $\bigcirc$ |  |
| Rated input current |  | Approx. 6mA (100VAC, 60Hz) | Approx. 7 mA (100VAC, 60 Hz ) | $\bigcirc$ |  |
| Operating voltage range |  | $\begin{gathered} 85 \text { to } 132 \text { VAC } \\ (50 / 60 \mathrm{~Hz} \pm 5 \%) \end{gathered}$ | 85 to 132 VAC $(50 / 60 \mathrm{~Hz} \pm 3 \%$, distortion rate $5 \%$ within) | O |  |
| Maximum number of simultaneous input points |  | $75 \%$ simultaneously ON (at 110VAC) | 100\% simultaneously ON (at 110VAC) <br> 60\% simultaneously ON (at 132VAC) | $\bigcirc$ |  |
| Inrush current |  | Max. 200 mA , within 1 ms (with 132VAC) | Max. 200 mA , within 1 ms (with 132VAC) | $\bigcirc$ |  |
| ON voltage/ON current |  | 80 V or more/5mA or more | 80 V or more/5mA or more | $\bigcirc$ |  |
| OFF voltage/OFF current |  | 30 V or less/1mA or less | 30 V or less/1.7mA or less | $\bigcirc$ |  |
| Input impedance |  | Approx. $18 \mathrm{k} \Omega(60 \mathrm{~Hz})$, <br> Approx. $21 \mathrm{k} \Omega(50 \mathrm{~Hz})$ | Approx. $15 \mathrm{k} \Omega(60 \mathrm{~Hz})$, <br> Approx. $18 \mathrm{k} \Omega(50 \mathrm{~Hz})$ | O |  |
| Response time | $\mathrm{OFF} \rightarrow \mathrm{ON}$ | $15 \mathrm{~ms} \mathrm{or} \mathrm{less} \mathrm{(100VAC}$,60 Hz ) | $20 \mathrm{~ms} \mathrm{or} \mathrm{less} \mathrm{(100VAC}$,60 Hz ) | $\bigcirc$ |  |
|  | ON $\rightarrow$ OFF | $30 \mathrm{~ms} \mathrm{or} \mathrm{less} \mathrm{(100VAC}$,60 Hz ) | $20 \mathrm{~ms} \mathrm{or} \mathrm{less} \mathrm{(100VAC}$,60 Hz ) | $\bigcirc$ |  |
| Common terminal arrangement |  | 16 points/common | 16 points/common (2-wire type) | $\bigcirc$ |  |
| Number of occupied stations (number of occupied points) |  | 4 stations <br> (4 stations $\times 8$ points) | 1 station ( 1 station $\times 32$ points $\times 2$ modules) | $\times$ | The number of occupied points increases. The assignment of the entire system needs to be reconsidered. |
| Operation indication |  | ON indication (LED) | ON indication (LED) | $\bigcirc$ |  |
| External connection method |  | 50-point terminal block <br> (M3.5 $\times 7$ screws) <br> Transmission circuit part included | Transmission/module power supply parts: <br> 7-point terminal block (M3 $\times 5.2$ screws) <br> I/O part: <br> 34-point terminal block $(\mathrm{M} 3 \times 5.2 \text { screws })$ | $\times$ | Change in wiring is required. |
| Applicable wire size |  | 0.75 to $2 \mathrm{~mm}^{2}$ | 0.3 to $2 \mathrm{~mm}^{2}$ | $\bigcirc$ |  |
| Applicable solderless terminal |  | R1.25-3.5, R2-3.5 RAV1.25-3.5, RAV2-3.5 | RAV1.25-3 (Conforming to JIS C 2805) V2-MS3, RAP2-3SL, TGV2-3N | $\times$ | Change in wiring is required. |
| I/O module power supply | Voltage | 15.6 to 31.2VDC | 20.4 to 26.4 VDC (ripple ratio within 5\%) | $\Delta$ | The operating voltage range differs. |
|  | Current | 56 mA (at 24V TYP.) | 40 mA or less <br> (24VDC when all points are ON) | $\Delta$ | The current consumption increases by using two AJ65SBTB2N-16As. The current capacity needs to be reconsidered. |
| External dimensions |  | $170(\mathrm{H}) \times 64(\mathrm{~W}) \times 80(\mathrm{D}) \mathrm{mm}$ | $54(\mathrm{H}) \times 179(\mathrm{~W}) \times 40(\mathrm{D}) \mathrm{mm}$ | $\times$ | The overall size differs. Pay attention to the mounting dimensions. |
| Weight |  | 0.62 kg | 0.25kg | $\Delta$ |  |

## (2) Specifications comparison between AX31C and AJ65SBTB1-32D

| Specifications |  | AX31C |  | AJ65SBTB1-32D | Compatibility | Precautions for replacement |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Number of input points |  | 32 points |  | 32 points | $\bigcirc$ |  |
| Insulation method |  | Photocoupler |  | Photocoupler | $\bigcirc$ |  |
| Rated input voltage |  | 12/24VDC | $\begin{gathered} \hline 12 / 24 \mathrm{VAC} \\ 50 / 60 \mathrm{~Hz} \end{gathered}$ | 24VDC | $\Delta$ | 12/24VAC, 12VDC cannot be used. ${ }^{*}{ }^{1}$ |
| Rated input current |  | 4mA (12VAC/DC), <br> 8.5 mA (24VAC/DC) |  | Approx. 7 mA | $\triangle$ | Rated input current is smaller. ${ }^{* 2}$ |
| Operating voltage range |  | $\begin{gathered} 10.2 \text { to } \\ 26.4 \mathrm{VDC} \end{gathered}$ <br> (ripple ratio within 5\%) | $\begin{aligned} & 10.2 \text { to } 26.4 \mathrm{VAC} \\ & (50 / 60 \mathrm{~Hz} \pm 5 \%) \end{aligned}$ | 19.2 to 26.4 VDC <br> (ripple ratio within 5\%) | $\Delta$ | 12/24VAC, 12VDC cannot be used. ${ }^{* 1}$ |
| Maximum number of simultaneous input points |  | 70\% simultaneously ON (at 26.4VAC) |  | 100\% simultaneously ON | $\bigcirc$ |  |
| ON voltage/ON current |  | 7 V or more/ 2 mA or more |  | 14 V or more/3.5mA or more | $\Delta$ | 12/24VAC, 12VDC cannot be used. ${ }^{*}$ |
| OFF voltage/OFF current |  | 2.5 V or more <br> 0.7 mA or less |  | 6 V or less/1.7mA or less | $\Delta$ | 12/24VAC, 12VDC cannot be used. ${ }^{*}$ |
| Input resistance (Input impedance) |  | Approx $2.7 \mathrm{k} \Omega$ |  | Approx. 3.3k $\Omega$ | $\Delta$ | Input resistance is increased. ${ }^{* 2}$ |
| Response time | $\mathrm{OFF} \rightarrow \mathrm{ON}$ | 30 ms or less (12/24VDC) | $\begin{gathered} \hline 35 \mathrm{~ms} \text { or less } \\ (12 / 24 \mathrm{VAC}, \\ 60 \mathrm{~Hz}) \\ \hline \end{gathered}$ | 1.5 ms or less (at 24 VDC ) | $\Delta$ | The response times differ. |
|  | $\mathrm{ON} \rightarrow$ OFF | 30 ms or less (12/24VDC) | 35 ms or less $\begin{gathered} (12 / 24 \mathrm{VAC}, \\ 60 \mathrm{~Hz}) \end{gathered}$ | 1.5 ms or less (at 24 VDC ) | $\Delta$ |  |
| Common terminal arrangement |  | 16 points/common |  | 32 points/common | $\Delta$ | As common terminal arrangement changes from 16 points/common to 32 points/ common, wiring with a different voltage per common is not possible. |
| Number of occupied stations (number of occupied points) |  | 4 stations <br> (4 stations $\times 8$ points) |  | 1 station <br> (1 station $\times 32$ points) | O |  |
| Operation indication |  | ON indication (LED) |  | ON indication (LED) | O |  |

*1: Consider the characteristics of the triac and observe the necessary precautions by referring to Section 5.3 (5) before replacing the modules.
*2: Install a fuse for each external terminal point to prevent the burnout of the external devices and modules during load shorts. In addition, when a fuse blown indication is necessary, configure an external circuit.

## (13) Specifications comparison between AJ35PTF-24T and AJ65SBTB1-32T1

*1 Consider the characteristics of the triac and observe the necessary precautions by referring to Section 5.3 (5) before replacing the modules.
*2 Install a fuse for each external terminal point to prevent the burnout of the external devices and modules during load shorts. In addition, when a fuse blown indication is necessary, configure an external circuit.

*1: Confirm the specifications of the sensors or switches to be connected to the AJ65SBTCF1-32D.
*2: For details on the response time, refer to the MELSECNET/MINI-S3 Master Module Type AJ71PT32-S3, AJ71T32-S3, A1SJ71PT32-S3, A1SJ71T32-S3 User's Manual.

### 5.3 Precautions for Replacement of I/O Module

## (1) Wiring

(a) Wire gauge and size of solderless terminals

As CC-Link supports compact modules and terminal blocks, the wire gauge and size of the solderless terminals applicable to terminal blocks differ from those that can be used on the MELSECNET/MINI-S3, A2C(I/O).
For this reason, when replacing the existing system with CC-Link, use wires and solderless terminals that meet the CC-Link specifications.
(b) Input method

Contents of the "Input method" item in the "Specifications" column for input modules and I/O modules in Section 5.2 are described below.
Positive common (Sink type) : means that DC power + is connected to the common terminal.
Negative common (Source type) : means that DC power - is connected to the common terminal.
Positive/negative common shared type (Sink/source shared type):
means that either DC power + or DC power - is connected to the common terminal.
(c) Using wiring conversion adapter

When installing a MELSECNET/MINI-S3-CC-Link module wiring conversion adapter to the CC-Link remote I/O module (AJ65BTB1-16D, AJ65BTB2-16D or AJ65BTB1-16T), the external dimensions are increased by 5.1 mm (height) and 28.5 mm (depth).
If the connected cable is not long enough, wiring to the CC-Link remote I/O module cannot be made.

## (2) External wiring connector

(a) Purchasing external wiring connectors

At the CC-Link 32-point connector type I/O module, the external wiring connector is not included in the package. The external wiring connector (A6CON■) must be purchased separately.

## (3) Tightening module mounting screws and terminal block screws

Tighten module mounting screws and terminal block screws within the range described below. Tightening screws too much may cause damage to the module case. For details, refer to each product manual.
(a) CC-Link system compact type remote I/O module

For terminal block type, one-touch connector type, and 40-pin connector type remote I/O module

| Screw | Tightening torque range |
| :--- | :---: |
| Module mounting screw (M4 screw with plain washer finished round) | 78 to $108 \mathrm{~N} \cdot \mathrm{~cm}$ |
| Terminal block screw (M3 screw) | 59 to $88 \mathrm{~N} \cdot \mathrm{~cm}$ |
| Terminal block mounting screw (M3.5 screw) | 68 to $98 \mathrm{~N} \cdot \mathrm{~cm}$ |

(b) CC-Link system remote I/O module (A2C shape)

| Screw | Tightening torque range |
| :--- | :---: |
| Module mounting screw (M4 screw with plain washer finished round) | 78 to $108 \mathrm{~N} \cdot \mathrm{~cm}$ |
| Terminal block screw (M3.5 screw) | 68 to $92 \mathrm{~N} \cdot \mathrm{~cm}$ |
| Terminal block mounting screw (M4 screw) | 102 to $138 \mathrm{~N} \cdot \mathrm{~cm}$ |

(c) CC-Link system remote I/O module

| Screw | Tightening torque range |
| :--- | :---: |
| Module mounting screw (M4 screw) | 78 to $118 \mathrm{~N} \cdot \mathrm{~cm}$ |
| Terminal block screw (M3.5 screw) | 59 to $88 \mathrm{~N} \cdot \mathrm{~cm}$ |
| Terminal block mounting screw (M4 screw) | 78 to $118 \mathrm{~N} \cdot \mathrm{~cm}$ |

(d) Wiring conversion adapter

| Screw | Tightening torque range |
| :--- | :---: |
| Adapter, Terminal block mounting screw (M4 screw) | 78 to $118 \mathrm{~N} \cdot \mathrm{~cm}$ |
| CTL + terminal screw (M3 screw) | 49 to $78.4 \mathrm{~N} \cdot \mathrm{~cm}$ |

## (4) Precautions for input module (specifications change)

(a) The rated input current

Some CC-Link modules support a smaller rated input current than MELSECNET/MINI-S3,A2C(I/O) modules do. Confirm the specifications of the sensors or switches to be connected before use.
(b) The rated voltage value

CC-Link's DC input module is dedicated for use at 24VDC.
Confirm the specifications of the sensors or switches to be connected before use.
(c) The common terminal arrangement

Use caution when using voltages that differ depending on each common as the common terminal arrangement may differ between the CC-Link and the MELSECNET/MINI-S3, A2C(I/O).

## (5) Precautions for output module (specifications change)

(a) The output current values

Some CC-Link modules support a smaller output current than MELSECNET/MINI-S3,A2C(I/O) modules do. Before using an output module having a smaller output current on CC-Link, confirm the specifications on the load side.
(b) The common terminal arrangement

Use caution when using voltages that differ depending on each common as the common terminal arrangement may differ between the CC-Link and the MELSECNET/MINI-S3, A2C(I/O).
(c) The common maximum load current

Sometimes the maximum load current per common differs between CC-Link and MELSECNET/ MINI-S3,A2C(I/O). Check the maximum load current per common before use.
(d) Precautions when using the triac output module

Operation of the triac that is used on the triac output module may be unstable when a sudden change occurs in the voltage and current due to component characteristics.
Problems due to voltage and current fluctuation might become obvious depending on individual differences between components. For this reason, refer to the following manual and check for any corresponding items in the precautions.

- I/O Module Type Building Block User's Manual

## REPLACING ANALOG I/O MODULE

### 6.1 List of Alternative Analog I/O Module Models

| MELSECNET/MINI-S3, A2C models to be discontinued |  | Replacement to CC-Link |  |

### 6.2 List of Alternative Master Module Models

### 6.2.1 Comparisons of analog input module

(1) Comparisons between A68ADC and AJ65BT-64AD
(a) Performance specifications comparisons

O : Compatible, $\triangle$ : Partial change required, $\times$ : Not compatible

| Item | A68ADC | AJ65BT-64AD | Compati- <br> bility | Precautions for <br> replacement |
| :--- | :---: | :---: | :---: | :--- | :--- |
| Number of occupied <br> I/O stations (number of <br> points) | 4 stations (4 stations $\times 8$ points) |  |  |  |

(b) Functional comparisons

O: Compatible, $\Delta$ : Partial change required, $\times$ : Not compatible

| Item | A68ADC | AJ65BT-64AD | Compatibility | Precautions for replacement |
| :---: | :---: | :---: | :---: | :---: |
| Averaging processing A/D conversion system | A/D conversion is performed according to set times or set processing time on a channel, which is specified for the averaging processing to be performed on by the programmable controller CPU. After the conversion, the maximum and minimum values are removed, and the remaining total is averaged and the results are stored in the buffer memory. | A/D conversion is performed according to the preset number of times or preset time on each channel, the A/D conversion data obtained during that time is averaged, and the average value is stored to the remote register as a digital output value. | $\bigcirc$ |  |
| Specification of channel to use | The A68ADC has an 8 channels of the A/D conversion circuit. Execution/nonexecution of the A/D conversion can be specified on each of those channels. With the programmable controller CPU, the channel to execute A/D conversion on is specified to address 0 (specification of channel to use) of the buffer memory. | Enable (execute)/disable (do not execute) A/D conversion is specified on each channel. (default: execution on all channels disabled) By making unused channels conversion prohibited, sampling time can be shortened. | $\bigcirc$ |  |
| Offset/gain setting | Changes the I/O conversion characteristics. | Changes the I/O conversion characteristics. For that, offset/gain settings can be configured for each channel without a aid of a various register. | $\bigcirc$ |  |

(c) Programmable controller CPU I/O signal comparisons

I/O signal is different, so the sequence program must be changed.
For details on I/O signals and sequence programs, refer to the User's Manual.

| A68ADC |  |  |  | AJ65BT-64AD |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Device No. | Description | Device No. | Description | Device No. | Description | Device No. | Description |

### 6.2.2 Analog output module comparison

## (1) Comparisons between A64DAVC and AJ65BT-64DAV

(a) Performance specifications comparisons

O: Compatible, $\Delta$ : Partial change required, $\times:$ Not compatible

## (b) Functional comparisons

O: Compatible, $\triangle$ : Partial change required, $\times$ : Not compatible

| Item | A64DAVC | AJ65BT-64DAV | Compatibility | Precautions for replacement |
| :---: | :---: | :---: | :---: | :---: |
| Analog output enable signal | With the analog output enable signals ( $\mathrm{Yn}+18$ to $\mathrm{Yn}+1 \mathrm{~B}$ ), it is possible to select the type of output values at each channel from D/A converted analog values and output offset values. | By turning the analog output enable signal ON or OFF with the sequence program, it is possible to select the type of output values at each channel from D/A converted analog values and output offset values. <br> Note, however, that the D/A conversion time (conversion speed) is fixed regardless of the setting of the analog output enable signal. | O |  |
| Analog output enable/disable setting | Stores the channel to disable analog output from ( $0 \mathrm{~V} / 0 \mathrm{~mA}$ ) in the buffer memory of the A64DAVC. | By writing " 0 " or " 1 " to the address of the remote register using the sequence program, it is possible to select on each channel whether to enable or disable outputs of analog values. | O |  |
| HOLD/CLEAR setting | In preparation for the event that the programmable controller CPU enters a stop status or an error status, select HOLD or CLEAR (offset values or $0 \mathrm{~V} / 0 \mathrm{~mA}$ ) analog values that are stored before a stop or an error occurrence using the HOLD/CLEAR terminal. | In preparation for the event that the programmable controller CPU enters a stop status or the AJ65BT64DAV stops D/A conversion due to an error, the HLD/CLR terminal can be used to select whether to hold or clear analog values (output offset values) that are being output from each channel right before those stops. The HLD/CLR terminal is provided on the front of the module and this selection can be made on all channels at once. (Including the case of the disconnections of link communication) | O |  |
| Offset/gain setting | Changes the I/O conversion characteristics. | I/O conversion characteristics can be changed as desired when the detailed ones are required. To do this, short the test mode terminal to enter a test mode, and configure the offset/gain settings for each channel without a aid of a various register. Also, if detailed I/O conversion characteristics are not required, the default offset/gain values can be used by turning on the I/O signal RYn4 (offset/gain selection) to the master station. | O |  |

(c) Programmable controller CPU I/O signal comparisons

I/O signal is different, so the sequence program must be changed.
For details on I/O signals and sequence programs, refer to the User's Manual.

## (b) Functional comparisons

O: Compatible, $\triangle$ : Partial change required, $\times$ : Not compatible

| Item | A64DAIC | AJ65BT-64DAI | Compatibility | Precautions for replacement |
| :---: | :---: | :---: | :---: | :---: |
| Analog output enable signal | With the analog output enable signals ( $\mathrm{Yn}+18$ to $\mathrm{Yn}+1 \mathrm{~B}$ ), it is possible to select the type of output values at each channel from D/A converted analog values and output offset values. | By turning the analog output enable signal ON or OFF with the sequence program, it is possible to select the type of output values at each channel from D/A converted analog values and output offset values. <br> Note, however, that the D/A conversion time (conversion speed) is fixed regardless of the setting of the analog output enable signal. | O |  |
| Analog output enable/disable setting | Stores the channel to disable analog output from ( $0 \mathrm{~V} / 0 \mathrm{~mA}$ ) in the buffer memory of the A64DAIC. | By writing " 0 " or " 1 " to the address of the remote register using the sequence program, it is possible to select on each channel whether to enable or disable outputs of analog values. | O |  |
| HOLD/CLEAR setting | In preparation for the event that the programmable controller CPU enters a stop status or an error status, the HOLD/CLEAR terminal can be used to select HOLD or CLEAR (offset values or $0 \mathrm{~V} / 0 \mathrm{~mA}$ ) analog values that are stored before a stop or an error occurrence. | In preparation for the event that the programmable controller CPU enters a stop status or the AJ65BT64DAI stops D/A conversion due to an error, the HLD/CLR terminal can be used to select whether to hold or clear analog values (output offset values) that are being output from each channel right before those stops. The HLD/CLR terminal is provided on the front of the module and this selection can be made on all channels at once. (Including the case of the disconnections of link communication) | O |  |
| Offset/gain setting | Changes the I/O conversion characteristics. | I/O conversion characteristics can be changed as desired when the detailed ones are required. To do this, short the test mode terminal to enter a test mode, and configure the offset/gain settings for each channel without a aid of a various register. Also, if detailed I/O conversion characteristics are not required, the default offset/gain values can be used by turning on the I/O signal RYn4 (offset/gain selection) to the master station. | O |  |

## (c) Programmable controller CPU I/O signal comparisons

I/O signal is different, so the sequence program must be changed.
For details on I/O signals and sequence programs, refer to the User's Manual.

### 6.2.3 Comparison of temperature input module

## (1) Comparisons between A64RD3C and AJ65BT-64RD3

## (a) Performance specifications comparisons

O: Compatible, $\triangle$ : Partial change required, $\times$ : Not compatible

| Item | A64RD3C | AJ65BT-64RD3 | Compatibility | Precautions for replacement |
| :---: | :---: | :---: | :---: | :---: |
| Measurement method | 3 -wire type |  | $\bigcirc$ |  |
| Connectable platinum resistance thermometer | Pt100 (JIS C 1604-1989, DIN43760-1980) | Pt100, JPt100 | $\bigcirc$ |  |
|  | JPt100 (JIS C 1604-1981) |  | $\bigcirc$ |  |
| Temperature input range | $\begin{gathered} \mathrm{Pt} 100:-180\left[{ }^{\circ} \mathrm{C}\right] \text { to }+600\left[{ }^{\circ} \mathrm{C}\right] \\ (27.08 \Omega \text { to } 313.59 \Omega) \end{gathered}$ | $-180\left[{ }^{\circ} \mathrm{C}\right]$ to $600\left[{ }^{\circ} \mathrm{C}\right]$ | $\bigcirc$ |  |
|  | $\begin{gathered} \mathrm{Pt100}:-180\left[{ }^{\circ} \mathrm{C}\right] \text { to }+600\left[{ }^{\circ} \mathrm{C}\right] \\ (25.8 \Omega \text { to } 317.28 \Omega) \end{gathered}$ |  | $\bigcirc$ |  |
| Detected temperature value | 16bits signed binary-1800 to +6000(down to 1 decimal place $\times 10$ ) |  | $\bigcirc$ |  |
|  | 32bits signed binary-180000 to +600000(down to 3 decimal places $\times 1000$ ) |  | $\bigcirc$ |  |
| Resolution |  | $0.025^{\circ} \mathrm{C}$ | $\bigcirc$ |  |
| Overall accuracy | $\begin{gathered} \pm 1 \% \\ \text { (accuracy relative to full-scale) } \end{gathered}$ | Ambient temperature $\left(25 \pm 5^{\circ} \mathrm{C}\right): \pm 0.1 \%$ <br> (accuracy relative to maximum value) <br> Ambient temperature <br> ( $20^{\circ} \mathrm{C}$ or less, $30^{\circ} \mathrm{C}$ or more): $\pm 0.25 \%$ (accuracy relative to maximum value) | $\bigcirc$ |  |
| Conversion speed | 40ms/channel |  | $\bigcirc$ |  |
| Number of temperature input points | 4 channels/module |  | $\bigcirc$ |  |
| Output current for temperature detection | 4.2 mA (MIN.), 4.7mA (MAX.) | 1 mA | $\times$ | The temperature detecting output current has been changed. |
| Insulation method | Between input terminal and programmable controller: <br> Photocoupler isolation (non-isolated between channels) | Between platinum resistance thermometer input and CC- <br> Link transmission line: <br> Photocoupler isolation <br> (non-isolated between channels) | $\bigcirc$ |  |
| Number of occupied stations (number of occupied points) | 4 stations (4 stations $\times 8$ points) | 4 stations (4 stations $\times 32$ points) <br> (RX/RY 128 points each, RWw/RWr 16 points each) | $\times$ | The number of occupied points increases. The assignment of the entire system needs to be reconsidered. |
| Connected terminal block | 47-point terminal block | 27-point terminal block | $\times$ | Change in wiring is required. |
| Applicable wire size | 0.75 to $2.00 \mathrm{~mm}^{2}$ |  | $\bigcirc$ |  |
| Applicable solderless terminal | $\begin{gathered} \text { V1.25-3, V1.25-YS3A, } \\ \text { V2-S3, V2-YS3A } \end{gathered}$ | RAV 1.25-3.5, RAV 2-3.5 (conforming to JIS C 2805) | x | Change in wiring is required. |

O : Compatible, $\triangle$ : Partial change required, $\times:$ Not compatible

| Item | A64RD3C | AJ65BT-64RD3 | Compatibility | Precautions for replacement |
| :---: | :---: | :---: | :---: | :---: |
| 24VDC internal current consumption | 0.2A | 0.17A | O |  |
| Weight | 0.81 kg | 0.38 kg | $\Delta$ |  |
| External dimensions | $170(\mathrm{H}) \times 100(\mathrm{~W}) \times 80(\mathrm{D}) \mathrm{mm}$ | $65(\mathrm{H}) \times 151.9(\mathrm{~W}) \times 63(\mathrm{D}) \mathrm{mm}$ | $\times$ | The overall size differs. <br> Pay attention to the mounting dimensions. |

## (b) Functional comparisons

O: Compatible, $\Delta$ : Partial change required, $\times:$ Not compatible

| Item | A64RD3C | AJ65BT-64RD3 | Compatibility | Precautions for replacement |
| :---: | :---: | :---: | :---: | :---: |
| Conversion enable/disable specification for each channel | Selects on each channel whether to enable or disable temperature detection. |  | $\bigcirc$ |  |
| Sampling/avera ging processing specification | Performs processing on a detected temperature in the specified processing method, and stores the processed data to the buffer memory. <br> The following three processing methods are available: <br> - Sampling processing <br> - Time averaging processing <br> - Count averaging processing | Selects on each channel whether to perform the sampling processing or movement averaging processing. (default $\cdots$ sampling processing) | $\triangle$ | The AJ65BT64RD4 has been provided the movement averaging processing instead of the averaging processing on A64RD3C. |
| Storage of detected temperature value | The value down to the 1st decimal place and the value down to the 3rd decimal place are stored to the buffer memory. <br> - Value down to 1st decimal place (16-bit signed binary) Example) 53.8( ${ }^{\circ} \mathrm{C}$ ) $\rightarrow 538$ <br> - Value down to 3rd decimal place (32-bit signed binary) Example) $216.025\left({ }^{\circ} \mathrm{C}\right) \rightarrow 216025$ | The value down to the 1 st decimal place and the value down to the 3rd decimal place are stored to the remote register. | $\bigcirc$ |  |
| Wire break detection | Detects wire breaks on the connected Pt100 or cable. <br> Wire breaks on each channel are detected, and the wire break detection flag (X19 to X 1 A ) corresponding to each channel is turned ON. | Detects wires breaks on the connected platinum resistance thermometer for each channel. | O |  |
| Specification of platinum temperature measuring resistor type | Specifies platinum temperature measuring resistor type to be used. <br> The following two types of platinum temperature measuring resistors can be used: <br> - Pt100…new JIS . DIN type (JIS C 1604-1989, DIN43760-1980) <br> - JPt100 $\cdots$ conventional JIS type (JIS C 1604-1981) | Specifies platinum temperature measuring resistor type to be used. <br> The following two types of platinum temperature measuring resistors can be used: <br> - Pt100 ......new JIS, IEC type (JIS C 1604-1997, IEC 751 1983) <br> - JPt100 $\cdots$ conventional JIS type (JIS C 1604-1981) | $\bigcirc$ |  |

## (c) Programmable controller CPU I/O signal comparisons

The sequence program must be changed as the I/O signals differ.
For details on I/O signals and sequence programs, refer to the User's Manual.

## (3) Comparisons between A64RD4C and AJ65BT-64RD4

## (a) Performance specifications comparisons

O : Compatible, $\triangle$ : Partial change required, $\times$ : Not compatible

| Item | A64RD4C | AJ65BT-64RD4 | Compatibility | Precautions for replacement |
| :---: | :---: | :---: | :---: | :---: |
| Measuring method | 4-wire type |  | O |  |
| Connectable platinum | Pt100 <br> (JIS C 1604-1989, DIN43760-1980) | Pt100, JPt100 | O |  |
| measuring resistor | JPt100 (JIS C 1604-1981) |  | O |  |
| Temperature input range | $\begin{gathered} \text { Pt100: }-180\left[{ }^{\circ} \mathrm{C}\right] \text { to }+600\left[{ }^{\circ} \mathrm{C}\right] \\ (27.08 \Omega \text { to } 313.59 \Omega) \end{gathered}$ | $-180\left[{ }^{\circ} \mathrm{C}\right]$ to $600\left[{ }^{\circ} \mathrm{C}\right]$ | O |  |
|  | JPt100: - $180\left[{ }^{\circ} \mathrm{C}\right.$ ] to $+600\left[{ }^{\circ} \mathrm{C}\right]$ ( $25.8 \Omega$ to $317.28 \Omega$ ) |  | O |  |
| Detected temperature value | 16bits signed binary $-1800 \text { to }+6000$ <br> (down to 1 decimal place $\times 10$ ) |  | O |  |
|  | 32bits signed binary-180000 to +600000(down to 3 decimal places $\times 1000$ ) |  | O |  |
| Resolution | $0.025^{\circ} \mathrm{C}$ |  | $\bigcirc$ |  |
| Overall accuracy | $\begin{gathered} \pm 1 \% \\ \text { (accuracy relative to full-scale) } \end{gathered}$ | Ambient temperature: $\left(25 \pm 5^{\circ} \mathrm{C}\right)$ $\pm 0.1 \%$ <br> (accuracy relative to maximum value) <br> Ambient temperature <br> $\left(20^{\circ} \mathrm{C}\right.$ or less, $30^{\circ} \mathrm{C}$ or more): $\pm 0.25 \%$ <br> (accuracy relative to maximum value) | O |  |
| Conversion speed | 40ms/channel |  | $\bigcirc$ |  |
| Number of temperature input points | 4 channels/module |  | O |  |
| Output current for temperature detection | 4.2 mA (MIN.), 4.7mA (MAX.) | 1 mA | $\times$ | The temperature detecting output current has been changed. |
| Insulation method | Between input terminal and programmable controller: <br> Photocoupler isolation (non-isolated between channels) | Between platinum temperature measuring resistor input and CC-Link transmission line: <br> Photocoupler isolation (non-isolated between channels) | O |  |
| Number of occupied stations (number of occupied points) | 4 stations (4 stations $\times 8$ points) | 4 stations ( 4 stations $\times 32$ points) <br> (RX/RY 128 points each, RWw/RWr 16 points each) | $\times$ | The number of occupied points increases. The assignment of the entire system needs to be reconsidered. |
| Connected terminal block | 47-point terminal block | 27-point terminal block | $\times$ | Change in wiring is required. |
| Applicable wire size | 0.75 to $2.00 \mathrm{~mm}^{2}$ |  | $\bigcirc$ |  |
| Applicable <br> solderless <br> terminal | $\begin{gathered} \text { V1.25-3, V1.25-YS3A, } \\ \text { V2-S3, V2-YS3A } \end{gathered}$ | RAV 1.25-3.5, RAV 2-3.5 (conforming to JIS C 2805) | $\times$ |  |

O: Compatible, $\triangle$ : Partial change required, $\times$ : Not compatible

| Item | A64RD4C | AJ65BT-64RD4 | Compatibility | Precautions for replacement |
| :---: | :---: | :---: | :---: | :---: |
| 24VDC <br> internal current consumption | 0.15A | 0.17A | $\Delta$ | The current consumption increases. The current capacity needs to be reconsidered. |
| Weight | 0.81 kg | 0.38 kg | $\triangle$ |  |
| External dimensions | $170(\mathrm{H}) \times 100(\mathrm{~W}) \times 80(\mathrm{D}) \mathrm{mm}$ | $65(\mathrm{H}) \times 151.9(\mathrm{~W}) \times 63(\mathrm{D}) \mathrm{mm}$ | $\times$ | The overall size differs. Pay attention to the mounting dimensions. |

## (b) Functional comparisons

O: Compatible, $\Delta$ : Partial change required, $\times:$ Not compatible

| Item | A64RD4C | AJ65BT-64RD4 | Compatibility | Precautions for replacement |
| :---: | :---: | :---: | :---: | :---: |
| Conversion enable/disable specification for each channel | Selects on each channel whether to enable or disable temperature detection. |  | $\bigcirc$ |  |
| Sampling/avera ging processing specification | Performs processing on a detected temperature in the specified processing method, and stores the processed data to the buffer memory. <br> The following three processing methods are available: <br> - Sampling processing <br> - Time averaging processing <br> - Count averaging processing | Selects on each channel whether to perform the sampling processing or movement averaging processing. <br> (default $\cdots$ sampling processing) | $\triangle$ | The AJ65BT64RD4 has been provided the movement averaging processing instead of the averaging processing on A64RD3C. |
| Storage of detected temperature value | The value down to the 1st decimal place and the value down to the 3rd decimal place are stored to the buffer memory. <br> - Value down to 1st decimal place (16-bit signed binary) Example) $53.8\left({ }^{\circ} \mathrm{C}\right) \rightarrow 538$ <br> - Value down to 3rd decimal place (32-bit signed binary) Example) $216.025\left({ }^{\circ} \mathrm{C}\right) \rightarrow 216025$ | The value down to the 1 st decimal place and the value down to the 3rd decimal place are stored to the remote register. | $\bigcirc$ |  |
| Wire break detection | Detects wire breaks on the connected Pt100 or cable. <br> A wire break on a wire on a channel is detected, turning the $\Sigma$ wire break detection flag (X19) ON. | Detects wires breaks on the connected platinum temperature measuring resistor for each channel. | $\bigcirc$ |  |
| Specification of platinum temperature measuring resistor type | Specifies the platinum temperature measuring resistor type to be used. The following two types of platinum temperature measuring resistor can be used: <br> - Pt100…new JIS . DIN type (JIS C 1604-1989, DIN43760-1980) <br> - JPt100 $\cdots$ conventional JIS type (JIS C 1604-1981) | Specifies the platinum temperature measuring resistor type to be used. <br> The following two types of platinum temperature measuring resistor can be used: <br> - Pt100 ......new JIS, IEC type (JIS C 1604-1997, IEC 751 1983) <br> - JPt100 $\cdots$ conventional JIS type (JIS C 1604-1981) | $\bigcirc$ |  |

## (c) Programmable controller CPU I/O signal comparisons

The sequence program must be changed as the I/O signals differ.

## (b) Functional comparisons

O: Compatible, $\triangle$ : Partial change required, $\times$ : Not compatible

| Item | AD61C | AJ65BT-D62 | Compatibility | Precautions for replacement |
| :---: | :---: | :---: | :---: | :---: |
| Count function at 1-phase/ 2-phase pulse input | - Captures 1-phase or 2-phase pulses from a pulse generator, and counts each of these pulses at its rise and fall. 1-phase input . . . Two counts are performed on a single pulse. 2-phase input . . . Four counts are performed on a single pulse at each of the $A$ and $B$ phases. <br> - Specifies the addition and subtraction counts in buffer memory during 1 -phase input. During 2-phase input, it is automatically judged to perform addition when the A phase pulse comes before the B phase pulse, and perform subtraction when the $B$ phase pulse comes before the A phase pulse. | - Captures 1-phase or 2-phase pulses from a pulse generator, and counts each of these pulses at its rise and fall. <br> 1-phase input . . . Two counts are performed on a single pulse. 2-phase input. . . Four counts are performed on a single pulse at each of the $A$ and $B$ phases. <br> - Specifies the addition and subtraction counts to RY during 1-phase input. During 2-phase input, it is automatically judged to perform addition when the A phase pulse comes before the B phase pulse, and perform subtraction when the B phase pulse comes before the A phase pulse. | $\bigcirc$ |  |
| Comparison signal output function for counter value | - Compares the counter value with the set value, and outputs result signals of small, large (>, <), or coincidence ( $=$ ) to the programmable controller CPU. <br> - Performs external outputs of the coincidence signal to the external (EQU) terminal when the set value coincides with the count value. Note, however, that to do this the coincidence signal output enable flag must be turned ON beforehand by the sequence program. | Sets the output status of any channel in advance, and compares it with the current value to output ON/OFF signals. | $\bigcirc$ |  |
| Preset function | - Changes the current counter value <br> - Execution of a preset is performed an external preset. | to the specified value. by the sequence program or input of | $\bigcirc$ |  |
| Ring counter function | - Outputs the coincidence signal when the set value matches the counter value, and set the current value as the preset value. Note, however, that to do this the ring counter switch must be turned ON. | Counts repeatedly between the ring counter value and the preset value by the ring counter command. | 0 |  |
| Count start/ stop function by external input | - Starts or stops counting by the external disable (DIS) terminal turning ON/OFF. | - | $\triangle$ | This is performed on the function start terminal. |
| Hardware reset function | - Initializes (clears data and sets default value) AD61C I/O signals and buffer memory by the reset switch on the front of the AD61C. | - | $\times$ | This function is not available. |
| Error detection function | - Stores the first error to buffer memory if any errors are found in communication (FROM/TO instructions) from the programmable controller CPU to buffer memory on AD61C. | - | $\times$ | This function is not available. |

## (c) Programmable controller CPU I/O signal comparisons

The sequence program must be changed as the I/O signals differ.
For details on I/O signals and sequence programs, refer to the User's Manual.

## 8 <br> REPLACING THE COMMUNICATION MODULES

## [AJ65BT-R2N]

## (b) Functional comparisons

The following table shows RS-232 interface module comparisons between MELSECNET/MINI-S3 and CC-Link.

O: Compatible, $\Delta$ : Partial change required, $\times$ : Not compatible

| Item | Functions |  | Compatibility | Precautions for replacement |
| :---: | :---: | :---: | :---: | :---: |
|  | AJ35PTF-R2 | AJ65BT-R2N |  |  |
| Barcode reading | Actually required data only can be read to the programmable controller CPU regardless of the data communication protocol of the compatible barcode reader. | None | $\times$ | Utilize nonprocedural communication. |
| ID card reading/ writing | Data can be read from and written to a programmable controller CPU by setting the MINI standard protocol for communication with the compatible ID card controller. | None | $\times$ | Utilize nonprocedural communication. |
| Nonprocedural communication | Nonprocedural communication with external devices is available. | Nonprocedural communication with external devices is available. There are two methods for nonprocedural communications: the automatic buffer memory update function and the RIWT (RISEND) and RIRD (RIRCV) instructions. | $\triangle$ | Create new programs as there is no compatibility in programs. |

(c) Switch comparisons

The switch settings are not compatible as MELSECNET/MINI-S3 and CC-Link are different networks.
For details, refer to the User's Manual for each module.
(d) Parameter comparisons

The parameter settings are not compatible as MELSECNET/MINI-S3 and CC-Link are different networks.
For details, refer to the User's Manual for each module.
(e)Program Comparisons

The I/O signals and buffer memory are not compatible as MELSECNET/MINI-S3 and CC-Link are different networks.
For details, refer to the User's Manual for each module.

## APPENDICES

## Appendix 1 External Dimensions

For external dimensions of modules described in this handbook, refer to the user's manual for each module.

## Appendix 2 Performance Specifications Comparison between MELSECNET/MINI-S3 compact type I/O module and Renewal Tool for A0J2

## Appendix 2.1Precautions for the performance specifications comparison

This section describes the precautions when comparing the performance specifications between a MELSECNET/MINI-S3 compact type I/O module and a renewal tool for A0J2.
(1) External supply power (24VDC)

The renewal tool for A0J2 requires an external supply power (24VDC). Reuse the I/O module terminal block of the existing MELSECNET/MINI-S3 compact type I/O module and connect the external supply power ( 24 VDC ) to the renewal tool.
For precautions or details when connecting the external supply power, refer to the following.

- Renewal tool for A0J2 series Transition from MELSEC-A0J2(H) series to renewal system using renewal tool
(Issued by Mitsubishi Electric System \& Service Co., Ltd.)

When the I/O module on the CC-Link side is connected to the renewal tool for A0J2 with the dedicated cable, the external supply power (24VDC) supplies the driving power for external devices of the I/O module on the CC-Link side.

## (2) Selection of I/O modules on the CC-Link

The renewal tool for A 0 J 2 has functions that convert AC input into DC input, and convert transistor output into relay output or triac output.
Therefore, select a DC input module and a transistor output module for the I/O modules on the CC-Link side, regardless of the type of the renewal tool for A0J2.
When the I/O module on the CC-Link side is connected to the renewal tool for A0J2 with the dedicated cable, select the AJ65SBTCF1-32D or AJ65SBTCF1-32T that can be wired using a connector for the I/O module on the CC-Link side.
The mounting plate SC-A0JQPT2 can be used to mount the AJ65SBTCF1-32D or AJ65SBTCF1-32T. In this case, drilling of mounting holes is not required.

## (3) Derating chart for the maximum number of simultaneous input points

(a) Input module on the programmable controller side

Check the number of simultaneous input points by referring to the derating chart of the selected CCLink input module.
When the AJ65SBTCF1-32D is used, the maximum number of simultaneous input points is $100 \%$ (all points turn on simultaneously).
(b) Renewal tool for A0J2

The maximum number of simultaneous input points of the renewal tool for A0J2 (input module) has the limitation depending on the external supply power (24VDC) that supplies the power to the module. Use the module within the range shown in the derating chart in the performance specifications comparison.

## (4) Temperature derating for the triac output module

The output load current of the renewal tool for A0J2 (triac output module) has the limitation depending on the ambient temperature in the environment where the module is used.
Use the module within the range shown in the temperature derating chart in the performance specifications comparison.

## Appendix 2.2Performance specifications comparison

This section shows the performance specifications comparison between MELSECNET/MINI-S3 compact type remote I/O module and interface module of renewal tool for AOJ2 described in Section 1.2.
(1) Specifications comparison between AJ35PTF-32A and interface module (SC-A0JQIF32A)

| Specifications |  | AJ35PTF-32A input specifications | SC-A0JQIF32A input specifications | Compatibility | Precautions for replacement |

*1 The following figure shows the derating.
When the voltage of the external power supply (module power supply) is high, the AC input simultaneous ON ratio is low.

*2 Check that the specifications of leakage current of the used sensor and switches are equal to or less than the OFF current value.
If leakage current is equal to or more than the OFF current specifications, take measures against it with referring to "Input Module Troubleshooting" in the following handbook.
(Handbook for replacement)
Renewal tool for A0J2 series transition from MELSEC-A0J2(H) series to renewal system using renewal tool (Refer to Appendix 2.5.)
*3 A value when the AJ65SBTCF1-32D is used.
*4 A value when the AJ65SBTCF1-32T is used.
*5 The weight of the fixed stand of programmable controller depends on replacement type of renewal tool for A0J2.
*6 The external dimensions of the SC-A0JQIF28AR do not include those of its projection.

## WARRANTY

Please confirm the following product warranty details before using this product.

## 1. Gratis Warranty Term and Gratis Warranty Range

If any faults or defects (hereinafter "Failure") found to be the responsibility of Mitsubishi occurs during use of the product within the gratis warranty term, the product shall be repaired at no cost via the sales representative or Mitsubishi Service Company.
However, if repairs are required onsite at domestic or overseas location, expenses to send an engineer will be solely at the customer's discretion. Mitsubishi shall not be held responsible for any re-commissioning, maintenance, or testing on-site that involves replacement of the failed module.
[Gratis Warranty Term]
The gratis warranty term of the product shall be for one year after the date of purchase or delivery to a designated place. Note that after manufacture and shipment from Mitsubishi, the maximum distribution period shall be six (6) months, and the longest gratis warranty term after manufacturing shall be eighteen (18) months. The gratis warranty term of repair parts shall not exceed the gratis warranty term before repairs.
[Gratis Warranty Range]
(1) The range shall be limited to normal use within the usage state, usage methods and usage environment, etc., which follow the conditions and precautions, etc., given in the instruction manual, user's manual and caution labels on the product.
(2) Even within the gratis warranty term, repairs shall be charged for in the following cases.

1. Failure occurring from inappropriate storage or handling, carelessness or negligence by the user. Failure caused by the user's hardware or software design.
2. Failure caused by unapproved modifications, etc., to the product by the user.
3. When the Mitsubishi product is assembled into a user's device, Failure that could have been avoided if functions or structures, judged as necessary in the legal safety measures the user's device is subject to or as necessary by industry standards, had been provided.
4. Failure that could have been avoided if consumable parts (battery, backlight, fuse, etc.) designated in the instruction manual had been correctly serviced or replaced.
5. Failure caused by external irresistible forces such as fires or abnormal voltages, and Failure caused by force majeure such as earthquakes, lightning, wind and water damage.
6. Failure caused by reasons unpredictable by scientific technology standards at time of shipment from Mitsubishi.
7. Any other failure found not to be the responsibility of Mitsubishi or that admitted not to be so by the user.

## 2. Onerous repair term after discontinuation of production

(1) Mitsubishi shall accept onerous product repairs for seven (7) years after production of the product is discontinued. Discontinuation of production shall be notified with Mitsubishi Technical Bulletins, etc.
(2) Product supply (including repair parts) is not available after production is discontinued.
3. Overseas service

Overseas, repairs shall be accepted by Mitsubishi's local overseas FA Center. Note that the repair conditions at each FA Center may differ.

## 4. Exclusion of loss in opportunity and secondary loss from warranty liability

Regardless of the gratis warranty term, Mitsubishi shall not be liable for compensation to:
(1) Damages caused by any cause found not to be the responsibility of Mitsubishi.
(2) Loss in opportunity, lost profits incurred to the user by Failures of Mitsubishi products.
(3) Special damages and secondary damages whether foreseeable or not, compensation for accidents, and compensation for damages to products other than Mitsubishi products.
(4) Replacement by the user, maintenance of on-site equipment, start-up test run and other tasks.
5. Changes in product specifications

The specifications given in the catalogs, manuals or technical documents are subject to change without prior notice.

The company names, system names and product names mentioned in this manual are either registered trademarks or trademarks of their respective companies.
